Air Plows. A V shaped contrivance, to be placed on the front of engines of fast express trains, is the latest scheme to get more speed, by overcoming much of the natural resistance of the air to the front of the locomotive. The plow extends from a few inches above the track to the top of the smokestack, the sharp edge of course in front. "Shoveling fog" is a common expression among railroad men, but plowing wind is a new thing in railroad agriculture. - English Mechanic.

Packed in the Ice for the Winter. On last Saturday Master Calvin B. Crocker captured a twelve pound turtle. The reptile was discovered under the ice that had formed over a pool near his home on Rockland street, and was taken "alive and kicking" after a breaking and entering of his icy home. - Dedham (Mass.) Transcript.
