All Watch Work Warranted.  
Jewelry Made to Order.  
138 Second St., The Dalles, Or.

## Kranich and Bach Pianos.

Used as Standards of the high-grade of manufacture.

## JUDGE NELSON'S DECISION.

Speaking of patent medicines, the Judge says: "I wish to deal fairly and honorably with all, and when I find an article that will do what it is recommended to do, I am not ashamed to say so. I am acquainted with Dr. Vanderpool (having been treated by him for cancer), and have used his blood medicine, known as the S. B. Headache and Liver Cure, and while I am 75 years old, and have used many pills and other remedies for the blood, liver and kidneys, I must say that for a kidney tonic in Bright's disease, and as an alternative for the blood, or to correct the action of the stomach and bowels, it is a very superior remedy, and beats anything I ever tried."  
J. B. NELSON,  
Yakima, Wash.

At 50 cents a bottle. It is the poor man's friend and family doctor.

## JOHN PASHEK, Merchant - Tailor,

Next door to Wasco Sun.  
Just Received, a fine stock of Suitings, Pants Patterns, etc., of all latest Styles, at Low Prices.  
Madison's Latest System used in cutting garments, and a fit guaranteed each time.

Repairing and Cleaning  
Neatly and Quickly Done.

CHAR. STUBLING. OWEN WILLIAMS.

## Stubling & Williams, The Germania, SECOND ST., THE DALLES, - OREGON

Dealers in Wines, Liquors and Cigars. Milwaukee Beer on Draught.

## W. H. Young,

## Blacksmith & Wagon Shop

## PUMPED A LAKE DRY

Modern Methods of Engineering Tested in Michigan.

## SEEKING COPPER UNDER A LAKE.

The Marquette Mining Company Carry out an Absurd Idea.

## INCIDENTS OF THE EXPERIMENT

A Shaft to be Sunk in the Center of the Lake Bed as a Precaution for Safety--Other Notes.

DETROIT, Nov. 22.—A special from the superintendent of the Marquette and Pittsburg Copper Co. states that what seemed an impossible and absurd undertaking last spring is now an accomplished fact. The last drop of water has been pumped from Lake Angeline, and now a hole marks the place of that once beautiful lake, three-quarters of a mile long and about one-third of a mile wide, and a depth of 15 feet. Last spring, while the ice was solid, a scow was constructed on the ice, and an engine and boiler and an immense centrifugal pump was placed in position on the scow. When the ice melted the scow was held in position by large timbers driven in the ground at each corner. Before any pumping was done a trench was dug to the Carp river, a distance of three miles, and five feet of the entire surface was drained in this manner. Then the pump was put to work and has been running almost continuously until this week. As the lake lowered the boat was moved to the center and a laundress was constructed to the trench on the shore. For two weeks past hundreds of salmon, some weighing five pounds, have been caught in the laundress by means of a wire screen. One day the superintendent threw a live goose in the lake near the end of the suction pipe. The goose was drawn into the pipe, went through the pump, and was caught in the laundress uninjured save for the loss of some feathers. Mining operations are being pursued under the lake, but there is no danger of a cave-in, and a shaft will at once be sunk in the center of the lake.

## TO APPEAR IN THE DALLES. What the Oregonian Says of the Kent-Bories Exhibition.

From the Oregonian 20th.]

During the silent passage of time upon the past twelve prancing months, the artistic taste of Portland has been quietly but steadily developing, and to no one is more credit due than to Mr. C. W. Kent, who, in a dozen different ways, has lent the experience of his artistic stage training and sensitive nature toward the desired end. His capabilities as an actor of power and versatility were fully appreciated by those fortunate enough to hear the marvelous rendition of Poe's "Telltale Heart" at the Arion hall last month, and also in the quiet but subtle work of the short comedietta at the Concordia hall. The fact of Mr. Kent being an enthusiastic and polished lecturer on the subject of Charles Dickens and his works, has lately leaked out, but to all requests for a public rendition of his lecture he has hitherto made a decided denial, on the ground that the city did not contain a sufficient quantity of the great writer's admirers to warrant the expense of such an undertaking. Manager Freidlander hearing of this, however, and being urged at the same time by the large number of Dickens worshippers in the city to use his influence and co-operation, has persuaded Mr. Kent to devote an evening from his other duties and give a "Dickens Lecture," illustrating his subject by dissolving views to a musical accompaniment. The 10th of December, at the Marquam Grand has been decided upon, when Mr. Kent will make his initial bow as a lecturer before a Portland audience. The interest and good wishes of his many Portland friends are warmly with him in his endeavor to gratify their request for an artistic enjoyable and intellectual trial.

## The International Conference.

LONDON, Nov. 21.—American delegates to the international monetary conference, which opens tomorrow in Brussels, left Victoria station this morning in a special. Senator Allison said there is no telling how long the conference will last. I expect it will be a week before we get fairly down to business. An adjournment over the Christmas holidays is inevitable.

## SAVE THE YOUNG SALMON.

Prof. D. S. Jordan Writes Upon Traps, Wheels and Lines.

Prof. D. S. Jordan, president of Leland Stanford, Jr., university, is probably one of the best-posted men on the habits of fish in the United States, having given years of study to the subject. Recently he wrote a letter on the subject, from which we quote:

"A well-ordered salmon hatchery is the only means by which the destruction of the salmon fisheries of the Columbia river can be prevented. Since my last letter upon the subject, in 1880, the hatchery has been established, although I know very little as to its practical working. Meanwhile conditions which were then unfavorable to the growth of the salmon have been rendered vastly more worthy than they were in 1880. At that time fishing was done by means of gill-nets. No young fish were caught, and there were no wheels or traps or any other contrivances which the salmon could not escape. Since that time the number of gill-nets has greatly increased, and there are also all sorts of other contrivances causing the destruction of salmon, or worse than that a system of seining has come into effect, by which not only the full-grown salmon are caught, but young salmon of all sizes are destroyed, I am told, in great numbers. The destruction of these young salmon must exert a most detrimental influence, and unless that can be controlled and the nets and other contrivances removed from the river, there is no doubt that the salmon fishery will disappear. The states of Oregon and Washington cannot afford to let this great industry go out of their hands. It is most important to have accurate knowledge of the ways and habits of the salmon.

"As to the question of how a young salmon can be recognized or distinguished from trout, permit me to say that this offers no difficulty to any person who will take a little pains and who can count. The steelhead and all the other trout of different sizes have an anal fin, that is, the fin behind all others and in front of the tail. It is comparatively small, containing nine or ten rays, counting the different ones and including the stubs, while the salmon have in the anal fin from 12 to 16 rays. The two common salmon in the Columbia, the quinnat or King salmon, and the blueback, can be easily distinguished by any one who will give attention to them. The young of both are found in the river. They can be easily told by the color. The blueback is hardly ever spotted; the quinnat is almost always so. The one positive difference which separates the quinnat from the blueback is the fact that on the first or front gill arch the blueback has about twice as many appendages or gill-rakers as the quinnat has.

"There are no hybrid salmon, so far as I have seen, found in the Columbia. There is found in the river a kind of salmon called dog salmon a distinct kind that is properly called by that name.

"When any one catches a fish before it is mature, he has so far done his part toward the destruction of the salmon fishery."

## Panama Canal Scandal.

PARIS, Nov. 21.—The death of Baron de Reinach, who was one of the men compromised in the Panama canal scandal, has caused considerable discussion, and stories are afloat that, rather than stand prosecution, he committed suicide. This morning it is said his death was caused by cerebral excitement brought on by the discovery that papers showing that he was compromised in the canal scandal had been stolen from him. His family refused to allow an autopsy to be held, and this is taken as a confirmation of the suicide theory. The family give us their reason for refusing to allow an autopsy that it is contrary to the Jewish religion. The baron leaves a fortune of 75,000,000 francs.

## AN ALASKA VOLCANO

Exciting Incident in the Cruise of the U. S. R. M. Cutter Corwin.

## AT THE BIRTH OF A NEW VESUVIUS

Fifty Miles From Cape St. John in a Country as Yet Unexplored.

## LAVA AND ASHES IN BIG QUANTITY

The Schooner Helen Washed Ashore by an Earthquake Tidal Wave Near Cape Runkoff.

SAN FRANCISCO, Nov. 21.—The revenue cutter Corwin has arrived here after an eight months' cruise in Alaskan waters. About the most exciting incidents of the cruise took place September 14th, when the Corwin was off Sand Point. It was at the time that a new volcano broke out on the Alaskan peninsula, inland from Cape St. John. The birth of the volcano was marked by heavy shocks of earthquake which trembled the country for many miles around. The Corwin was many miles at sea when the eruption began, and yet she got a very lively shaking up. It was nearly a dead calm and about 9 o'clock at night when the ship began to tremble violently from stem to stern. Some of the men were nearly thrown off their feet and nearly all of them grew sick, so peculiar were the sensations.

The shock lasted nearly five minutes, and during that time the sea had a strange, yellowish appearance. Mr. Applegate, of Sand Point, reported having seen the volcano, and the bearings he took showed it to be about fifty miles in from Cape St. John, and in a section of the country not yet explored. He reports the crater as vomiting out an immense quantity of lava and ashes, and the country seemed to be ablaze for miles around. One vessel within reach of the volcano's effects, the schooner Helen, of Seattle, was caught by something akin to a tidal wave and washed ashore near Cape Runkoff. The Corwin people discovered her on the 23rd of October.

A shoveling party was sent ashore to dig a canal to water, and when this was accomplished the cutter hauled the Helen afloat. On the Corwin's way down she passed the rescued schooner at Sand Point apparently seaworthy and sound. In Capt. Hooper's summary of the cruise the Corwin is put down as steaming 22,000 miles during the summer. Her seizures are limited to the British steamer Coquitlam of Vancouver, and the British schooner Henriette, of Victoria. Both seizures were for violations of the revenue laws, and had nothing to do with the modus vivendi. The vessels were delivered to the collector of customs at Sitka. Seals were scarce in Behring sea, the pack being well started on its annual winter excursion down the coast.

## Salvation Army Strength.

NEW YORK, Nov. 21.—There will be several thousand Salvation Army men and women in line tonight and tomorrow night to give evidence publicly of the increase in the strength of the army, whose delegates are to meet in the first continental congress since the work started in this country. There are commissioners from many sisters. At the head of the line Gen. Ballington Booth and Mrs. Booth will ride in a carriage over the route of parade.

## Itching For Office.

Telegram. The itch for officeholding increases in virulence with every change of administration. This is but natural under our system of government, and yet one wonders why so large a class of people should be infected with the desire to hold office when we remember what an unsatisfactory life it is and how uncertain the tenure of office is in a country where political revolutions are liable to occur every four years.
