SOLE AGENT FOR THE

All Watch Work Warranted.

Jewelry Made to Order.  
138 Second St., The Dalles, Or.

## Kranich and Bach Pianos.

Used as Standards of the high-grade of manufacture.

## JUDGE NELSON'S DECISION.

Speaking of patent medicines, the Judge says: "I wish to deal fairly and honorably with all, and when I find an article that will do what it is recommended to do, I am not ashamed to say so. I am acquainted with Dr. Vanderpool (having been treated by him for cancer), and have used his blood medicine, known as the S. B. Headache and Liver Cure, and while I am 75 years old, and have used many pills and other remedies for the blood, liver and kidneys, I must say that for a kidney tonic in Bright's disease, and as an alternative for the blood, or to correct the action of the stomach and bowels, it is a very superior remedy, and beats anything I ever tried."  
J. B. Nilsson, Yakima, Wash.

At 50 cents a bottle. It is the poor man's friend and family doctor.

## JOHN PASHEK, Merchant - Tailor,

Next door to Wasco Sun. Just Received, a fine stock of Suitings, Pants Patterns, etc., of all latest Styles, at Low Prices. Madison's Latest System used in cutting garments, and a fit guaranteed each time.

Repairing and Cleaning Neatly and Quickly Done.

CHAS. STUBLING. OWEN WILLIAMS.

## Stubling & Williams,

## The Germania,

SECOND ST., THE DALLES, - OREGON

Dealers in Wines, Liquors and Cigars. Milwaukee Beer on Draught.

A Building 24x40 feet in size, suitable for a waresroom;

Also

An office building, office furniture and safe, two horses, one set of wagon harness, one set of buggy harness, one second-hand wagon, one new wagon. Apply on the premises.

JEFFERSON STREET, between Second and Railroad, THE DALLES, OR

## THE REED GEYSER.

The Biggest Thing of the Kind Seen in 20 Years Experience.

REGULAR PULSATING INTERVALS.

The Grandest Displays are Made About Twice Every Day.

WORKING UNDER DIFFICULTIES.

A Wonderful Sight Taken in With Field Glasses at a Safe Distance—Minor Topics.

From the Oregonian, 22d.]

Superintendent Baxter, of the Union Pacific, who has been at the landslide at Reed's ranch for the past week, returned to the city yesterday. Mr. Baxter says he has had 20 years' experience in rail-roading, but this landslide is the biggest one he has ever seen. It sends down a mass of stuff about every hour, and gives a grand display about twice a day, when huge trees and boulders as big as box-cars come down with a noise that is deafening. In order to get men to work, it was necessary to station sentries within hail of each other clear up the side of the mountain, and whenever a slide started, warning was given by shouting from one to another. The debris has passed clear across Reed's ranch to the river. Mr. Baxter says it is a wonderful sight to look from the river through a glass at the head of the slide. Trees and rock are seen gradually moving down into the canyon, till it is "loaded," and then down comes a slide. They are now using dynamite in blowing down trees and rocks into the gorge, and axmen are felling trees in hopes of getting a tangled mass of trees and rocks in the canyon, which may stop the sliding. A number of photographers have been taking all kinds of views of the slide and Reed's ranch, or rather what was a ranch, for the buildings are now all crushed and pushed out of place and buried.

### Incidents of the Phenomena.

Perhaps Supt. Baxter does not intend to leave the impression that passengers may be transferred by telegraph at the Reed geyser. He tells the Telegram reporter that "telegraph offices have been opened on each side of the obstruction, with regular operators both day and night, and all arrangements have been made to facilitate the transferring of passengers."

The most absurd story is published by our worthy contemporary the Oregonian. We should smile to see those steam plows at work clearing the obstructions at Reed's geyser, on the U. P. R. It is right about one thing: "No effective work can be done until the earth hardens." This means much expensive experiment, and long tedious delays.

W. F. Butcher of Baker City, recent Cleveland wheel horse in Oregon, is certainly a clever predictionist of the obstruction at Reed's, on the U. P. R., he offers this wonderful theory: "The landslide was caused not so much by the recent heavy storms as by the action of the river upon the base of the hills. The bank had been entirely washed away by the current. The hills are of soapstone formation, and having been softened by the heavy rains, and having no support after the bank had been washed away, a landslide ensued. Mr. Butcher thinks the slide will continue until the earth dries up. The top of the locomotive which was caught in the slide can be seen from Bonneville." If intended as a joke this is a huge one. But where would the laugh come in.

### MARKET REVIEW.

Summary of Trade and Business for the Current Week.

THE DALLES, Nov. 23.—The week has been void of interest in business circles. Trade has been lighter than that of the previous week. Prices remain steady for staple dry goods, groceries and provisions. The sugar market is somewhat excited in San Francisco, as they find a very great scarcity of Yellows on hand and a sharp advance is expected in the near future. The limited stock of China sugars on hand will not cut any figure in holding down present prices, and the consequence is that the future will bring dearer sugar.

In produce lines the market is steady. Eggs are very scarce in the city and prices are firm at former quotations. The butter market is lifeless and prices are steady. Poultry is in good supply,

and the market is steady. Portland markets fluctuate and are over stocked, judging from the low quotations given. The supply of potatoes is inadequate for the demand of the city traders, and dealers are compelled to make shipments from west of the mountains to meet the requirements of trade, as sellers seem inclined to hold for better prices. Dealers are shipping in valley spuds of best quality at a cost of \$1.10 to \$1.20 per 100 lbs.

There is no change in the wheat situation, other than that the markets are weaker, which is discouraging to both holder and seller. Foreign and eastern markets are very weak and dull. San Francisco has marked down 3 points within the last few days on all grades. The Dalles market is above all others in quotations comparatively, which have ranged higher at this point all season than elsewhere on the coast, owing to strong competition in transportation, and the opposing effort of the enemies of the People's Line of Steamers running between this city and Portland. The farmers have been the present gainers at the expense of the enemy whose motto is "Down the people."

### Results of the Strike.

Oregonian. The Homestead strike has at length been formally declared off. It was in reality lost from the first, though the strikers were much better equipped for a long siege against capital than is usually the case. The record is one of losses in wages aggregating \$2,000,000, disappointment, unrest, social disorder and financial embarrassment. There is still a pathetic sequel to be added. The places of many of the men have been filled. The aid which the federated trades have furnished will now be withdrawn and hundreds of idle men and their dependent ones are left to face the rigors of a Pennsylvania winter wholly without means to make themselves comfortable. The difference between the bright July day in which the men were called out of the Homestead works and the bitter November day in which they were given permission by the leaders to again apply for employment therein, is not more marked than the difference in the situation of many of the men. The story does not differ in detail from many that have preceded it, but it is none the less sad because it is a stale repetition of useless strife, and its consequent anxiety, misery and defeat. As a drama, with Folly in the title role, such a movement may be considered successful. There were some elements of tragedy also in this one, but the curtain has been rung down and the actors are left face to face with reality, with its pressing demands of food and shelter and fuel and clothing. Two million dollars squandered in idleness leaves a pitiful vacancy in the homes of a laboring community, and the problem "what shall we eat and wherewithal shall we be clothed" will be a perplexing one in many a household in Homestead between this time and next April.

### CIRCUIT COURT.

Grand Jury Report—The Final of Criminal Actions.

In the matter of the final report of the grand jury for the November term, 1892, we, the grand jury, respectfully report to the court that we have now been in session six days and have found and returned into court nine indictments and five not true bills, and have also inquired into several matters brought before us that did not warrant indictments and upon which no report has been made.

We have also examined and inquired into the condition and management of the county jail and found it secure and in good order. We also inquired into the management of the clerk, sheriff and treasurer's offices and found them all in good condition and all books neatly kept and all correct so far as we were able to judge. We find that the vault in which the records and files of the clerk's office are kept is getting crowded and think that by putting in patent steel files much room could be gained, and the office would be made much more convenient. We would, therefore, recommend that such files be put in. We also visited the county poor farm and found it well and carefully kept and managed. We found that the inmates are all well cared for, fed and clothed, and entirely satisfied with the treatment they have received. Having completed our labors we respectfully ask to be discharged. James Le Duc, foreman.

## SUBTERRANEAN RIVER

Large One in Kentucky Explored and Utilized by a Farmer.

A LARGE CAVERN DISCOVERED

Wonders of Mother Earth as Revealed Below the Surface.

WATER IS USED IN KENTUCKY

Pumped From the Marvelous Depths by Hydraulic Rams for Domestic Purposes.

Princeton, Ky., Corr. Four years ago there was a trying drought in the vicinity of Princeton, 150 miles southwest of Louisville. Vegetation was suffering, and the farmers had to drive their cattle several miles to water at the famous Cave spring. This spring breaks out in the very heart of the town and supplies an abundance of excellent water. The opening through which it flows is four feet high by three feet wide, and leads into a long, narrow cavern, often traversed for a distance of half a mile by adventurous young men.

About this distance from the spring and near the college buildings there was a sink-hole communicating with the cavern and affording a ready if a somewhat rough means of ingress and egress. Beyond this point the cavern had not been explored, and no one knew the course taken by the water above the sink-hole. The ground begins to rise here and slopes gradually upwards for half or three quarters of a mile. On the slope toward the town Mr. P. H. Darby, owned a beautiful home surrounded by extensive lawns, gardens, etc, which were suffering for lack of water. After considering the matter he concluded from the general direction of the stream from the spring to the sinkhole it was probable that it passed near his house, certainly through his land.

With a couple of negroes, a small boat, lanterns and a compass and chain, he made a survey of the cavern and the stream from the sink-hole towards his house, which was distant about a quarter of a mile. He ascertained that the stream did flow from his house, and furthermore that at a point which he supposed was within fifty yards of his house, the cavern opened into quite a large chamber, at the upper end of which was a waterfall. He then retraced his steps and made the sink-hole landing in safety. Surveying then on the surface with the courses and distances found by the underground survey, he ran the line and put down the final stake within fifty yards of the house.

There was a slight depression of the ground at the last stake, such as is frequently observed in limestone districts, but no seeming communication with the cavern. He decided to drill through the stone, being assured of the accuracy of his survey, and never doubting but that he would break through into the subterranean chamber. There was no telling how far he would have to go, for he had taken no levels. However, at it he went, and kept a man busily drilling and blasting for two or three weeks, much to the amusement of some of the neighbors. He struck the chamber at a depth of twenty feet, and there was great joy, for even in Kentucky water is used for domestic purposes, such as cooking, cleaning and watering the gardens and the stock. He built a dam in the chamber and now two hydraulic rams force the water wherever needed. Over the entrance he built a conservatory and it is said that even during the severest winters all kinds of flowers thrive to excellent advantage. The cultivation of mushrooms in the cave was also begun.

Highest of all in Leavening Power.—Latest U. S. Gov't Report.
