The question is often asked, To what extent does the Gulf Stream modify the climate of the United States? To its supposed erratic movements is laid the blame of every abnormal season.

The presence of the warm water on the coast of Europe would in no way modify the climate if the prevailing winds were easterly instead of westerly. In winter were southeast instead of northwest, the climate would be equal to that of the Azore islands, mild and balmy.

The current is in its place ready to give off the heat and moisture to the air whenever the demand is made upon it, but by the erratic movements of the air this heat and moisture may be delivered at unexpected times and seasons, and thus give rise to the erroneous belief that the Gulf Stream itself has gone astray.
