

JUST FULL

of improvements - Dr. Pierce's Pleasant Pellets. To begin with, they're the smallest, and the easiest to take. They're tiny, sugar-coated anti-bilious granules, scarcely larger than mustard seeds. Every child is ready for them.

Then, after they're taken, instead of disturbing and shocking the system, they act in a mild, easy and natural way. There's no chance for any reaction afterward. Their help lasts. Constipation, Indigestion, Bilious Attacks, Sick or Bilious Headaches, and all derangements of the liver, stomach, and bowels are promptly relieved and permanently cured.

They're put up in glass vials, which keeps them always fresh and reliable, unlike the ordinary pills in wooden or pasteboard boxes

And they're the cheapest pills you can buy, for they're guaranteed to give satisfaction, or your money is returned. You pay only for the good you get.

THE citizens of Oxford, Chenango county, N. Y., are to celebrate the one hundredth anniversary of Oxford academy on June 28 and 29. The institution is the oldest but one in the state. Horatio Seymour, Ward Hunt and other distinguished men were enrolled on its list of students.

Kenneth Bazemore had the good fortune to receive a small bottle of Chamberlain's Colic, Cholera, and Diarrhea Remedy when three members of his tamily were sick with dysentery. This one small bottle cured them all and he had some left which he gave to Geo. W. Baker, a prominent merchant of the place, Lewiston. N. C., and it cured him of the same complaint. When troubled with dysentery, diarrhea, colic or cholera morbus, give this remedy a trial and you will be more than pleased with the result. The praise that naturally follows its introduction and use has made it very popular. 25 and 50 cent bottles for sale by Blakely & Houghton, druggists.

Deafness Cannot be Cured

By local applications, as they cannot reach the diseased portion of the ear. nized. An apparatus invented by Dr.

A WATCH OF WOOD.

The Remarkable Ingenuity Which Secured Pardon for a Bussian Convict. A watch described in the Scientific

American is an excellent illustration of what may be accomplished by a combination of ingenuity, skill and persistency. It is a watch made almost wholly of wood by a watchmaker, who was convicted of some crime and sent to Siberia by the Russian government. The convict made this watch to while away his time, and was pardoned because of his work. The only tool he had to work with was a penknife. Ir-regularity in the work can only be discerned by examining it with a glass. Nevertheless it is remarkably accurate and the watch runs and keeps fair time. The wood used was box wood. The numerals on the face are small pieces of ivory, inlaid. The dial wheels are of ivory, and are set on the face of the The hour, minute and second dial. hands are of tortoise shell. The second the main dial. The wheels and plates of the movement are of wood, while the pinions, balance, cylinder and eswound is made of wood with an ivory key. The winding "square" is of ob-long shape. This ingenious watchmaker also constructed the box in which the watch is contained. All the

joints are perfect, so that the box it practically dust proof. A LEGEND OF CALVARY.

About the Soldier Who Pierced Christ's Side with the Spear.

The name of the soldier who pierced Christ's side with the spear while he was hanging on the cross has been preserved in the legendary lore of the church as Longinus, says the St. Louis Republic. This man was one of the soldiers appointed to keep guard at the cross, and it is said that he was converted by the miracles which attended the crucifixion. The legend even goes further, declaring that he was one of the company of watchers set to guard the sepulcher, and that he was the only one who refused to be bribed to ay had been stolen by the disciples. For his fidelity to this great truth, Pi-late resolved upon his destruction. On this account Longinus left the army to devote his entire time to spreading the gospel; but he did this without first getting permission from the gov- eighteen inches apart, and made of ernor of Judea, or from Rome. He and two fellow soldiers whom he had converted retired to Cappadocia, where they began to preach the word of God. At the instigation of some of the leading Jews, however, Pilate sent out about forty-five feet in length, and a detachment of soldiers who surprised travels about one thousand feet per the deserters at a place where they minute. The splitting machine can were holding a Christian meeting, and where they had three crosses set up as an illustration of the tragedy which can be filled in about fifteen minutes. had occurred but a short while before at Jerusalem. All three were killed at the dock is from seven dollars to and beheaded, and their heads nailed eight dollars per cord, the manufacupon the crosses and carried in triumph back to Jerusalem.

AMBULANCE FOR MINE USE. It Is Adapted to Crooked and Unever Passageways.

The difficulty of carrying injured men in mines through narrow and uneven passages has often been recog-Faul Troisfontaines is described by the "Semaine Industrielle," of Brussels, and seems to be simple and convenient, as well as cheap. It consists of a sort and joined by a fabric of cord or mat, somewhat like a hammock, thus giving when required rigidity in one direc-tion and flexibility in the other. The injured man is laid in the litter with his legs extended and his arms at the side of his body; the upper part of the litter is then folded over and secured by three or four straps. The man by three or four straps. The man then forms a package, and can be carried without the slipping and jolting of an ordinary litter, no matter how narrow or rough the workings may be. In case of fracture there is believed to be less danger in carrying a man in might give the little fellows some this way, holding him immovable, than pleasure by taking them. Without a in attempting to keep the broken limb in place by rough splints or bandages extemporized on the spot. These lit-

WOOD FOR KINDLING. A "Run-down"

How It Is Prepared by Steam and Ma-chinery for Use.

Pine kindling wood comes principally from the forests of Virginia. The trees, says the Scientific American, are first out down and the trunks quartered and sawed into proper lengths. The wood is then carted to the coast, packed into sailing vessels and brought to this section, where it is bought up at the docks by the dealers and manufactured into kindling wood, being first sawed into short lengths, then passed through a steam splitter which carries the pieces to an elevator, which the whole system, and restores health in turn passes them along and drops and vigor. them down into the delivery wagons. The pieces of timber, which' are four feet six inches in length, are first sawed into eight and one-half inch lengths, the saws used for the purpose being thirty inches in diameter, one-eighth of an inch in thicknes, having fifty inch and a quarter teeth. These saws dial is recessed on the lower part of make about two thousand revolutions per minute, the attendant being able to saw up about from twelve to fifteen cords per day. The pieces as fast capement wheel are of ivory. The rachet spring is of wood. The plates are held together by wooden pins and the balance bridge by ivory screws. The key with which the watch is worked is more dwith an ivory worked by an eccentric, causes the sip, and is made like a modern rachet chain with the wood to move along under the kives, which pass down through the pieces of wood, splitting

each of them into a dozen or more pieces The knives are four in number and bolted into the crosshead. They are twelve inches in length, six inche s in width and three-quarters of an inch in thickness. The knives pass up and down a perpendicular slide with a twelve-inch stroke, making about veyance the round trip by writing and eighty cuts per minute. The endless chain is twelve inches in width, and passes over a wooden bed, the top of Address which is covered with an iron plate which protects the chain from the blows of the knives when striking the wood. At every downward stroke of the knives a moveable bearing which the knives pass through holds the pieces of wood down firmly against the chain. With the upward stroke it releases the split wood, which is moved forward about two inches at a stroke by the that the body of our Saviour chain, which is worked by the ratchet wheel and eccentric. The pieces of wood then drop down into an elevator at the end of the machine and are carried off to the delivery wagons by a number of buckets bolted on a twelve inch cotton belt. These buckets are wooden strips three inches in height and about one and one-half inches in thickness. They are held in place by being bolted to narrow iron strips on the under side of the belt. The belt is cut about twenty cords per day. A The wholesale price of Virginia pine tured kindling wood brings from eleven dollars to thirteen dollars per cord.

MADE YOUNG BY THE CIRCUS.

She, Has Found Them Useful on Several Occas

"What do you do when you need some money dreadfully and haven't got any?" asked one girl bachelor of another who carried herself with an opulent air and who was famous for dis-covering cash in times of financial distress, says the New York World.

"Well," replied the other bachelor, "I'll tell you, if you won't tell anybody. I borrow it from my funeral expenses." "Funeral expenses!" exclaimed the horrified querist, "what do you mean?" "Just this; when I first began earning money I put in bank several hundred dollars for my funeral expenses. I've always had a horror of people being able to say of me: 'Poor thing, her uncle had to bury her,' or 'The church had to pay her funeral.' Well, when I'm feeling pretty robust and want something very much, without having the requisite cash, a trip, a new gown, or a course of lectures, I borrow the sum needed from my funeral expenses, and put it back when I am in funds again. I argue that good clothes, rec-reation and intellectual pleasures help

me postpone my funeral, so it is really a wise investment. Do start a funeral fund. You don't know how convenient it is.

The Moon's Movements. The inhabitants of this earth have never seen but one side of the moon. The explanation is this: The moon makes one revolution on her axis in the same period of time that she takes Liver Regulator. I have not lost ne I gave it to. E. T. TAYLOR, Agt. for Grangers of Ga. up in revolving once around the earth: thus the same geographic region of the lunar surface is always toward us.

saw one man the other day who spent most of the forenoon trying to "borrow a boy to take to the circus." He of hurdle or litter, made of hoops about eight mm. in diameter, placed parallel thing that made the blood thrill in his out delay at Cascades. veins, but his dignity would not permit him to attend one without sufficient excuse. As he had no children of his own he was forced to hunt up somebody who would loan him a child to take to the show. He said: "But the strangest part of it all is that I was unable to around anxious to see a circus, and you would be right; but the supply did not equal the demand. By actual count I went to twelve of my friends who have growing boys and requested that I single exception they thanked me very much for my kindness, and said they were going to take them themselves. ters can be easily stored in a small Now, I would feel foolish going to a circus without I had a child with me. Yet I do not know of anything I like better. It brings back the old days when I was in the country. a bare-footed boy following the parade, look-ing with wonderment at the lone ele-phant plodding along. The smell of the sawdust, the cries of the peanut and lemonade man are as pleasant to circus without I had a child with me. and lemonade man are as pleasant to me as the new mown hay and singing birds. They are the chemicals which develop the unseen image which is npon the plate of memory, and it comes forth in all its glory. But I missed this all, for, thanks to the same feeling in the hearts of my father friends. all the available 'excuses' were taken up. Go myself? What do you take me for? Do you think I would allow any one to think I would enjoy such a thing as a circus? Never.'

Ignorance in Mexico.

Says an American business man who has been living in Mexico: "What Mexico most needs is education. The ignorance of the peons is astonishing. If the great churches of America, which are yearly sending millions of dollars to China and Africa to educate the heathen there, would devote a fair pro-portion of that money to Mexico far more good would be accomplished. The money would be better spent and results more apparent. The few mis-sionaries in that country are doing rood, but their number is not suficient. Then less theology and more liberal education should be taught, sectarianism should not interfere with the work. Strange as it may seem, the English tongue has displaced the French as a foreign tongue, and is rapidly being learned by the younger natives.
