Chinese Warships Sunk.

The locals are somewhat scarce today and for this reason, we make mention of the fact that the substance of this local is not a matter that occurred within the city limits. The Chinese fleet at Wei-Hai-Wei is wiped out its two largest vessels being sunk by the fire from the Japanese warships Wednesday. The Chinese made a gallant fight for it but were out generalled and out classed. It is only a question of a few days until the forts are in possession of the Japs, and then China must make such terms as she can, for Japan will have her at her mercy.

MAN-EATERS OF THE PACIFIC.

Sharks That Are the Dread of the California Fishermen.

The true man-eater shark as taken on the Pacific coast is known only as a man-eater. The shovel-nosed sharks are sand sharks, too cowardly to attack even a yellow dog. The thirty-four foot shark, captured by some fishermen, of the true man-eater variety (carcharodon carcharias), seemed brave enough and savage enough to attack anything within its reach. This monster's mouth was wide, the teeth long and sharp, with an inward incline. The stomach would hold a full-grown man easily and a good deal besides. The fish became entangled in a net off Point Lama. Two boats attacked the vicious creature and finally succeeded in punching an iron into its vitals. The side of one boat was stove in by a blow forcible enough to knock one fisherman overboard.

These sharks, says the New York Tribune, have been known to attack a small boat, upset it and eat the oarsman. A man-eater over forty-two feet long has been reported below San Diego. The natives are said to live in fear of this awful fish, which already has the record of having eaten six men. It has been shot frequently. The water about it has been discolored with blood. Yet the shark still lives. The tiger shark is as ferocious as the man-eater. Another large shark hereabouts is the basing shark. It is taken measuring fifteen to forty feet in length. The skin of one thirty-two feet long is at Stanford University museum. It was captured last March. This skin alone weighs over fifteen hundred pounds, while the shark's liver produced one hundred and eighty gallons of oil. These sharks, however, are sluggish, lazy and do not bite people. Their grill-rakers are on the whale model. When entangled in a net they frequently suffocate, as the net restricts the gills.

California fishermen do not consider five-foot sharks of much account when from San Diego wharves black sea bass are caught six to eight feet long, weighing three hundred to five hundred pounds. Such fish are common. They are taken on shark hooks and clotheslines. When hooked the fish is allowed to swim about the bay towing a two-inch plank. When he is exhausted the line is hauled in and the fish killed with an ax.

SCIENCE IN COREA.

It Explains Phenomena in a Way Peculiarly Its Own.

Education in Corea is of the Chinese order—the committal of whole books to memory. On all other subjects than knowledge of Chinese, says the Boston Transcript, ignorance is the fashion when it is not a reality. Philosophical speculation is stated to be common, but Corean notions of natural science are indeed very chaotic, if the following story may be accepted: "A well-known merchant of Chemulpo was asked by one of his native employes—a man of some education—whether or not he had ever seen a sparrow which had died a natural death. The person questioned did not remember that he had. He was then asked how the foreign servants accounted for such a phenomenon, for such it was, considering the vast number of sparrows in the world and the huge families they raise every year. The answer to this query being unsatisfactory, the Corean gave his explanation which was a popular one. He said that dying sparrows betook themselves to the seashore, dived into the mud and became clams. 'How else,' he triumphantly added, 'could you account for the number of clams along the coast?'"
