A MUD CREEK ROMANCE.

A Groom of a Day Is Left Unconsoled and Mourning.

Even the euphonesly named Mud Creek district, a few miles from this city, has its society events and also romances, if recent reports are true, and the last stir has left the community in a feverish state of excitement and gossip.

A young man, the accepted lover of a buxom maiden, after securing the necessary papers, was united in marriage last Sunday to his adored. The ceremony over, the bride of 16 made herself scarce by locking herself up in her bed chamber. The groom could not fathom this proceeding and made strenuous efforts to get at the cause of the trouble through the key-hole of the door, but to no avail. Next morning the wife applied to her spouse for the use of his key and also asked for a little money. Both requests were granted by the loving husband, and he has not seen his wife since.

The story is current that this fair maiden has an unkind father whose treatment of her became unbearable and to get beyond his jurisdiction she planned the marriage. The father gave her away on the marriage day, therefore relinquishing all control over future actions, and as soon as the wedding was over the fair maiden, not caring for her husband, left for parts unknown. It is stated that the young wife rode to North Yakima on horseback, fording swollen streams and overcoming all obstacles on the way. When it is considered that the distance is over 100 miles and the Columbia had to be crossed, the bravery of the fair and romantic maiden will be fully appreciated. The mother of the girl is said to reside in North Yakima, and will shelter her daughter. The newly married man, it is said, is still wondering "where he is at."—Walla Walla Statesman.

Condition of Winter Grain.

The report of the department of agriculture for April 1st makes the average condition of winter wheat \$1.4, against 99.5 in December; 77.1 last April, and \$1.4 at the same date in 1895. Leading winter-wheat states show averages as follows: Pennsylvania, 96; Ohio, 83; Michigan, 85; Indiana, 65; Illinois, 40; Missouri, 60; Kansas, 80; California, 99. The average rye condition was 88.9 against 82.9 last year.

In Great Britain the season is practically two weeks in advance of the date, owing to mild weather. Field work and spring sowing are far in arrears, owing to the persistent rain which has fallen throughout the month. There is complaint of rust prevailing to a limited extent in some of the eastern counties, and excessive wet has produced undue development of stalk in autumn-sown wheats. It is stated that in Devonshire some thousands of apple trees have been blown down in the heavy gales that have prevailed. The now firmly established market in England for our apples may, to a small extent, be improved next year by this.

In France there has been much rain during the month, and arrears of field work have not been, and cannot now be, made up. It is estimated that the wheat area will not exceed 16 1/2 million acres, a shortage of, approximately, three-quarters of a million acres. It is reported also that the winter wheat is not looking well, and that an average yield will not be reached. There is much dissatisfaction in France with the workings of the tariff and bounty provisions respecting wheat and flour, and the scale of drawbacks on exported flour made of imported wheat will perhaps be changed. In this case French flour will no longer compete with ours in the English market.

The True Remedy.

W. M. Repine, editor Tiskilwa, Ill., "Chief," says: "We won't keep house without Dr. King's New Discovery for Consumption, Coughs and Colds. Experimented with many others, but never got the true remedy until we used Dr. King's New Discovery. No other remedy can take its place in our home, as in it we have certain and sure cure for Coughs, Colds, Whooping Cough, etc." It is idle to experiment with other remedies, even if they are urged on you as just as good as Dr. King's New Discovery. How a Train Sweeps Air Along.

Interesting results of an investigation

of the effect produced by a railroad

train on the air through which it moves

were presented at a recent meeting of

the St. Louis Academy of Science by

Prof. F. E. Nipher. It appears that motion

is communicated to the atmosphere

many feet away, so that a large amount

of air is dragged along with the train. A

peculiar danger arises near a swift-

running train from the tendency of the

moving air to topple a person over, and

at the same time to communicate a

motion of rotation to the body, which may

cause it to roll under the train.—Youth's

Companion.
