**Sheepmen Will Meet.**

Since the visit of Secretary Wilson to the coast, and the stand he has taken in regard to grazing sheep on the Cascade reserve, the question has come up with renewed vigor, and not only the owners of sheep, but the great majority of residents in the eastern portion of the state, are intensely interested as to the outcome of the war waged at our principal industry, for those who know claim that should the reserve be closed, it must of necessity be the death of the industry in our state, and if this can be prevented such a calamity must not overtake us. Feeling that something must be done at once, in answer to a letter from F. W. Wilson, secretary of the Wool Growers' Association, President Young issues a call for a meeting to be held in this city on Thursday, Oct. 5th. Mr. Young will arrive in the city today and remain over to attend the meeting, when the question will be thoroughly canvassed and the best method of procedure in the matter arrived at.

All will recognize the importance of immediate action, and as it seems to be the wish of all concerned to hold this meeting, no doubt a large number of sheepmen and all concerned will make it a point to be here and take part in the deliberation.

There is more Catarrh in this section of the country than all other diseases put together, and until the last few years was supposed to be incurable. For a great many years doctors pronounced it a local disease, and prescribed local

remedies, and by constantly failing to cure with local treatment, pronounced it incurable. Science has proven catarrh to be a constitutional disease, and therefore requires constitutional treatment. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, Ohio, is the only constitutional cure on the market. It is taken internally in doses from ten drops to a teaspoonful. It acts directly on the blood and mucous surfaces of the system. They offer one hundred dollars for any case it fails to cure. Send for circulars and testimonials. Address, F. J. CHENEY & Co., Toledo, O. Sold by Druggists, 75c.

**THIS BEATS THE MAGICIANS.**

Apple Trees Blossom and Bear Fruit While You Wait—A Novel Camera.

According to a Washington correspondent, the department of agriculture has taken steps toward acquiring the right to use a recent invention, a kind of mutoscope camera, designed for a kind of picture-making never attempted hitherto.

For example, the contrivance is set up in front of a stalk of corn just sprouting, and takes a photograph of it every hour for six months, the exposures being made at such intervals by a peculiar automatic attachment. Subsequently the film ribbon on which these pictures are recorded is put into a magic lantern machine of the ordinary sort and run off at the rate of 20 a second, thus giving to the spectators in five minutes a view on the screen of a corn plant growing out of the earth, putting forth leaves, developing tassel and silk, exhibiting the ripened ears and finally decaying.

Anchor this new style of camera in an open space; attach to it a wire, and it will make an exposure every two hours from the beginning to the end of the year. The result will be a ribbon of the seasons, and in five minutes the spectators seated in a theater will have an opportunity to behold all the succeeding phenomena of the year. At first the ground will be seen covered with snow, which will vanish as the first vegetation makes its appearance. The trees will put forth leaves with visible rapidity in the sight of the audience, and when at last they fall and the landscape has assumed its former dreary aspect, the white mantle of Jack Frost will be spread again over the land.

One of the most interesting of the photographs made up to date with this novel apparatus represents an apple tree, which is seen in a few twinklings to display its new foliage, put forth buds and blossoms and ripen its fruit. Equally notable is a picture of a sunflower, snap shots of which were taken every minute from sunrise to sunset of a day. When the ribbon is run off at the rate of 20 photos a second one sees the flower turn on its stem steadily, always keeping its face toward the solar orb. It should be mentioned, by the way, that the views do not jump about in the way that is so annoyingly familiar, but are perfectly stationary, owing to the fact that each "snap" registers perfectly with the ones preceding and following.—Boston Transcript.
