CATARRH: FORERUNNER OF Northern Page

Few realize what a deep-seated, obstinate disease Catarrh is, regarding it as a simple in ammation of the nose and throat, little or no attention is given it. But, however insignificant it may seem at first, it is serious and far-reaching in its results.

The foul secretions entering the circulation poison the entire system. The stomach, kidneys—in fact all the organs—feel the effect of this catarrhal poison, and when the lungs are reached its progress is rapid and destructive, and finally ends in consumption.

It frequently happens that the senses of hearing and smell are in part or entirely lost, the soft bones of the nose eaten into and destroyed, causing intense suffering and greatly disfiguring the face. While sprays, washes and salves may give temporary relief, no permanent benefit can be expected from such treatment.

and far beyond the reach of mere local remedies. Those who rely upon them for a cure lose valuable time, meet with disappointment and allow the disease to take firmer hold. Only a real blood remedy can reach this troublesome and dangerous disease. 8. S. S cures Catarrh because it first cleanses and builds up the blood, purifies it, makes it rich and healthy, stimulates and puts new life into the sluggish worn-out organs, and thus relieves the system of all poisonous accumulations.

Mrs Josephine Polhill, of Due West, S. C., writes: "I had Catarrh, which became so deepseated that I was entirely deaf in one ear, and all inside of my nose, including part of the bone,
sloughed off. When the disease had gone this far the physician gave me up as incurable. I
determined to try S. S. S. as a last resort, and began to improve at once. It seemed to get at the
sett of the disease, and after a few weeks' treatment I was entirely cured, and for more than
seven years have had no sign of the disease."

S. S. S. is made of roots, herbs and barks of wonderful tonical and purifying properties. It is the only vegetable blood purifier known, and a certain and safe cure for all blood troubles. Send for our book on Blood and Skin Diseases, and at the same time write our physicians about your case. They will cheerfully give you any information or advice wanted. We make no charge for this.

PEOPLE YOU ALL KNOW.

Ben Saires arrived in town on the

P. P. McCully, of the Goldendale Sentinel, is in the city.

Mr. and Mrs. M. T. Nohn were pascengers on the Reliance this morning. Harry Gilpin, one of the leading farm-

ers of Wase) county, was in town today. Ex-State Senator Biggs arrived in town today from Wasco by the overland route.

Mrs. G. S. Donnell arrived here today from Goldendale on a visit to her sister, Mrs. Simeon Bolton.

Max Lueddeman, of the Antelope Herald, was in town last night and left for home this forenoon.

Delaware Has No Monopoly of the Industry.

Money Made on a Small Maryland Fruit Farm in Fourteen Years - How Railroads Have Helped.

It may be interesting to run over a short paper in the American Monthly Review of Reviews in which Worth B. Stottlemyer presents "The Balance one of the most profitable agricultural industries in that state, so much so that half of the farms in many of the counties have abandoned wheat and corn and the ordinary agricultural products, except for home consumption, and have taken to growing peaches.

"The quality of the soil," he says, "hardly enters into consideration in respect to location, as peach trees are adapted to almost any kind of soil. but a poor soil is to be preferred. Trees planted in a poor soil do not grow so rapidly, are therefore much more hardy and will endure severer never great enough to injure us or do winters than trees planted in richer soil. In order that a surer crop may be expected, the land should slope gently to the northwest. Land so sit- that it is fluid, falling from the height nated is exposed to the most rigorous of half a mile, would be as dangerous effect upon the trees in the way of with which a projectile travels can be frozen while in the incipient state by gun, will pass through a board.

Mr. Stottlemyer says that many of the prevalent diseases of the trees are tue to careless nurserymen. His farm of 30 acres was purchased in 1885 for 870 an aere, and was planted in peach trees at once. The trees cost him \$35 of paint and artist's brushee. a thousand. The total outlay, including planting, machinery and incidentals, was \$2,469.89.

"For four years the orehard was enltivated thoroughly, while only slight crops were realized the third and fourth years," he says, "however, the best. Ask your grocer for them. from a careful account made during the time, we found that the cost of cultivation was a little more than covered by the receipts from vegetables that were raised on the land in the meantime. The fifth year we realized a fairly good crop, and dur- have them. ing 14 years we secured six crops from the orchard.

"By careful records kept, we find that the average amount of fruit grown upon each tree for the six crops was 2 5-9 crates, or a little over 21/2 bushels. Thus, upon an average, each of the trees produced 15 bushels during its lifetime. In fact, the orchard produced 44,364 bushels of salable fruit. From the sale of these 44.364 bushels we realized a net gain, over picking, crating, shipping, commission, expenses, etc., of \$16,361.07. The net profit per bushel would be over a dollar."

Against the net returns from peach sales of \$46,361.07, Mr. Stottlemyer put in his balance sheet the cost of the land, of the trees, of planting and cultivation, fertilizers, machinery, incidentals, taxes and interest, which makes a total of \$7,399.69. This shows the profits to be \$38,961.38. The premature deaths of orchards from the "yellows" Mr. Stottlemyer says are generally attributable to the negligence of growers. Other growers realized larger returns than those from his orchard, he says, and he adds that the end is not yet when one candidly reflects upon the remarkable increase in the consumption of the fruit, almost to be regarded as a staple, and when "we see peach trees planted by the hundred acres, or-chards extending for miles, hundreds of hands busy plucking the luscious by Clarke & Falk, druggists. jan24-6w fruit and crating it for market, all on a single farm, and whole trainloads hauled from a single district: to June 3, 1896, will be paid at my for daily transportation; when a peach-grower can send his wife to

bank with \$3,500 in check returns for a single day, who has netted \$65,000 from a single crop.'

The industry of which Mr. Stottle myer draws so brilliant a picture he says has only been possible since transportation has been facilitated by a network of railroads.

BULLETS OF WATER.

Raindrops Would Kill Us All If the Air Did Not Prevent Their Swift

When you see the rain drops falling do you ever think of how swiftly they come down and what prevents them from doing great damage? Away up in the clouds little particles of moisture gather until they form a tiny drop. The droplets and ice crystals that form the elements of the cloud gradually or suddenly grow until their weight is enough to bring them to the ground before they can be again evaporated.

The resistance that the air offers to their passage keeps them from falling too fast. The drop soon acquires such a velocity that the air prevents it from going any faster. The larger and heavier the drop, the greater is the speed at which it falls, but it is serious damage to animals or plants. Were it not for the resistance of the air, a drop of water, notwithstanding western winds, and the sun has less as a bullet. The swiftness and force lriving forth the incipient buds, made sufficient to compensate for any which are thus kept in check. Con-softness or yielding quality it possequently they are less likely to be sesses. A caudle, when fired from a
