

MIDDLE WEST IN GRIP OF HEAT WAVE

By James L. Kilgallen
United News Staff Correspondent
CHICAGO, May 24.—With the mercury at 90, or thereabouts, the middle west Monday was in the grip of an intense heat wave.

In some places the mercury during the day rose even higher. Omaha and Chicago recording maximum temperatures of 92.

It was Chicago's hottest May 24 since 1911, when the mercury reached 94.

In the last 24 hours, the mercury at one time or another climbed to 90 in St. Paul, Milwaukee, St. Joseph, Missouri, and Council Bluffs, Kansas, and to 88 in Dallas and Kansas City.

The heat was indirectly responsible for a number of deaths, caused several prostrations, that resulted in deaths and did damage to crops and over the grain-producing country.

Four young Texans who respectively to the call of the cool waterways, lost their lives. They were Miss Marie Ventner, student, 19, and Philip Lane, printer, 20, drowned while motor boating, and Albert Roemer, 26, and Orlan Roemer, 24, drowned while swimming.

Crops suffered badly as it has been extremely warm the last few days. B. W. Snow, Chicago crop expert touring Kansas, wired that the crop prospect in the west half of Kansas is "gone to pieces." Illinois news came according to the state department of agriculture at Springfield, forest fires have been raging for three days in northern Minnesota and Wisconsin in Missouri, Iowa and Texas. The dry spell has been hampering crops. The general condition has caused a marked rise in prices of grain, particularly May wheat, on the Chicago board of trade.

Excursion boats on the Great Lakes are doing a tremendous business, and bathing beaches in Chicago and other large cities are crowded. Sunday nearly 100,000 Chicagoans found relief from the heat wave on lake boats, according to Robert McCreary, district collector of customs, in charge of excursion craft.

The weather forecaster couldn't promise any immediate relief Monday night.

ENGLISH HUMORIST "KIDS" COLONEL HARVEY'S FORD

By United News
LONDON, May 24.—"Bachelors' one of the brightest of English humorists, is having a lot of fun at the expense of Colonel George Harvey in the Daily Express. His latest quip regarding the new American consul's concerns his appearance in Hyde park, of which he says:

"So Colonel Harvey has been seen wearing a top hat and riding in a Ford in Hyde Park. Well, I gather that the corps diplomatique will accept the tall hat and the goggles. They may balk at the Ford, although why I don't know. Surely an ambassador is entitled to his hobby, however quaint!

"Anyhow, they think nothing of it in America. I am told they always take the Ford off the hook in the hall as we take our hats. We are too Ford-conscious in England.

"Now that Ambassador Harvey has driven one in Hyde Park, there need be no more nervous dodging into side streets on the part of other Ford owners.

"Other diplomats might follow Harvey's example in the matter of national customs. If the Siamese ambassador should take the air on a fine white elephant, it would brighten up Piccadilly immensely. The Chinese ambassador might use a palanquin—and the spectacle of the entire Japanese embassy committing harshari at one man would be wasteful, but picturesque, and would certainly attract as much interest as Minister Harvey's Ford."

CURIE RECEPTION BY PRESIDENT TIMELY

By United News
PARIS, May 24.—The tributes to Marie Curie by President Harding and Vice-President Coolidge were received here as exceedingly timely, and in the light of a counter tribute to Marie Curie's husband to France and Poland.

The popular press continues to hail the late Marie Curie. The San Sior expressed him of exultation in being unwilling to come to Paris.

STANFORD WINS TENNIS FROM MULTNOMAH CLUB
By United News
PORTLAND, May 24.—Stanford University won victories in an exhibition tennis match with Multnomah amateur Athletic club yesterday afternoon on the latter's courts.

NEW YORK LETTER
NEW YORK, May 24.—Katharine Hepburn, an artist, and Helena Zibulka, Russian, finding business a bit dull in New York, have decided to take a few weeks off for a little walk on the trip. Consequently they have started for San Francisco.

With the sleep showing velvet, fur-trimmed bathing suits, and with 75 women out of every hundred buying long, late evening, "fishbake" and afternoon breakfasts a sigh of thanks.

It was natural, perhaps, that the biggest reaction that F. W. Kellogg, business manager of the Los Angeles Express, got from his recent trip to Europe, had to do with the price of newsprint.

It looks as though we may be beginning to see a shortage of newsprint in the underground moving sidewalk as a desperate solution of our traffic problem—which is itself desperate enough to grasp at anything that waves the flag of hope.

B children has welcomed and delighted the croquet champion of Australia. Anyone who is inclined to think the world has moved on too rapidly or that the present generation lives only on, by and for excitement will do well to read and dwell upon these lines.

News of Interest to Farmers

O. A. C. Spray Spreader.
The spray spreader—cassinate and hydrated lime—recently developed by the O. A. C. Experiment station, is expected to be available to growers for use this fall. The new spreader is designed to increase the wetting and covering power of insecticide spray solutions, and to make them so thicker, it will thus make the solutions more effective and reduce the cost of application.

Tests conducted by the station with hundreds of caterpillars showed that a quart of lime drench as weak as 1 pound to 100 gallons of water was fatal to the larva unless it was eaten. The strength in usual field practice is 8 times this amount—2 pounds to 100 gallons.

It was found that the heavy application for spraying a much higher dose in the warm that was required for three principal reasons, physical deposit of the spray solution, of the spray materials and of application. Sprayers must be able to do this with the solution.

Conclusion on the efficacy of the spray are common to those of the grower from the occasional blotches he finds on leaf and fruit. The lime application is one in which all surfaces are coated with a smooth, even and impenetrable film.

Experiments over years of close study and tests have shown that of the known materials for spray calcium arsenate and lead are the best, and that cassinate and hydrated lime are the best materials to make them spread evenly over leaf and fruit.

A special preparation of these spreaders has been made up by commercial plants. It can readily be mixed in the tank at the rate of 12 ounces to 200 gallons.

Regue River Feared.
C. M. Seerist, vice-president of the Pacific Fruit Express company estimates that there will be between 800 and 900 cars of pears to move from the Regue river district, in spite of the fact that considerable damage has been done by recent frosts.

Green Fruits Advanced.
The green fruit season is much more advanced this year according to the reports of shipments from the Pacific Fruit Express company. According to C. M. Seerist, vice-president of the company, seven cartons of cherries have gone forward by freight from northern California points up to May 18. There was none shipped by freight to the same date last year.

Dairy Farmers Lucky.
"A new and easy way for Oregon farmers to get a high priced bull" will be explained to Farmers' week people by C. V. Castle, United States dairy specialist. The college considers the dairymen fortunate in being able to get this new plant "1" dairying by one of the country's dairy authorities. Mr. Castle will also discuss herd record keeping and cow testing association work.

zation and his fee board and keep and went back to his fellows. That's the obliging little pocket gopher that travels with Leo K. Couch of the bureau of Biological Survey, United States department of agriculture, who is giving a series of demonstrations out west on how to trap and poison pocket gophers.

This little renegade, whether because he has no choice in the matter or because he likes the government fare of carrots, potatoes and parsnips divulges the normal working methods of his kinmen. When all is set for the demonstration, he is taken from his cage. He sets to work, untroubled by the spectators, and gives a first-hand exhibition of how a gopher makes a tunnel. Then he shows how the mound is made and the entrance to it stopped up. His keeper then dashes him out, places him back in the cage and proceeds to his explanation of how to set traps and where to place bait to destroy his mascot's three formed brethren.

Bull Registration Required.
The law which created the dairy bull registration goes into effect Wednesday, May 25. The board has the blank license forms ready for use. These forms will be sent to the county agents and to any breeders wanting them. Information may be had an application to the dairy bull registration board, O. A. C., Corvallis.

Gopher Shows How.
There's one animal that would be mighty unpopular if he ever let civilization and his Britain beware!

The "maiden names" scored a jubilant victory the other day when Ruth Hale, who happily married to Heywood Brown, got her name on a real estate deed as Ruth Hale, rather than Mrs. Brown. She and her husband bought a piece of property together but in spite of the mutual agreement of the two as to nomenclature, the other principals in the deal sided with the idea. Finally, with the aid of her lawyers, Ruth Hale convinced them of the legality of it. Miss Hale is president of the Lucy Stone League, an organization of fifty women banded together to assert the unalienable right of a woman to the name she drew from her parents early in life.

AGRICULTURAL QUIZ ASKED BY FARMERS

By United News
WASHINGTON, May 24.—C. E. Barrett, chairman of the national board of farm organizations and president of the National Farmers' union, has appealed to farmers everywhere to urge adoption by congress of a resolution creating a special commission to make an inquiry into the agricultural situation.

Resolutions providing this have been introduced in both houses, and approved by committees.

With the creation of this commission, the farmers of the United States have reason to believe some of their most pressing problems will be solved," said Barrett. "They will at least know from an authoritative source the men and in millions who are collecting ruinous toll from their farmsteads."

Monday morning there was to be

CAMBRIDGE GIVES DEGREE TO SIMS

By United News
LONDON, May 24.—Formal honors such as are seldom extended to any person other than a royal or noble rank are being accorded Admiral William S. Sims, U. S. N., as he returns to England to receive an honorary degree from Cambridge University.

An escort of British destroyers followed him with the liner Cadiz, on which the Admiral and Mrs. Sims are passengers, and accompanied the ship in a Liverpool.

There is much more to our service than mere mechanical perfection.

The highest type of personal attention without regard to the means of patrons lends a distinctiveness to our establishment.

ment in France—had been misinterpreted in this country.

There was another derisive outburst.

"There is nothing in the present situation to warrant a belief that the sentence is endangered," Briand asserted vigorously.

Members started another uproar.

"Why did you order mobilization?" several voices demanded.
