PTOSIS

This word is pronounced toe-sis but has nothing to do with the toes. It has, however, a great deal to do with the abdominal muscles.

The majority of women have it to a greater or less degree. It is usually caused by badly designed corsets—those that constantly press down the abdomen instead of supporting it.

The constant downward pressure stretches the abdominal muscles so that in time they don't contract back again. Then the trouble begins, for unless the cause is removed chronic invalidism commences and all the doctors and medicines extant cannot cure it.

MODART CORSETS
Front Laced

are designed to prevent and correct ptosis. When properly fitted they give perfect support to the abdomen.

We invite you to have a trial fitting in our Corset Department. There is no charge for it. You will then appreciate what the MODART Corset can do for you.
