Multiplies two forces

which authorities now desire.

Persodent brings two other effects

The saliva contains two great tooth-

protecting forces. One is a starch di-

gestant, to digest starch deposits on teeth. The other is alkali, to neutralise mouth acids, which attack the teeth.

These forces usually need frequent stimulation. Certain foods will attack

these regularly.

Pepsodent, with every use, multiplies those tooth-protecting forces in the mouth. It largely increases the starch digestant and the alkalis. Thus night and morning it gives these usual forces a multiplied effect.

That alone marks tremendous prog-

ress toward better tooth protection.

Add This Beauty Pearly teeth—combat the film tonight

There is a way to prettier teeth, and millions of people have found it.

It consists in removing the dingy film. You see the results everywhereon teeth you envy, maybe. And those glistening teeth are often one's premier attraction.

This offers you a ten-day test, to show how whiter, cleaner, safer teeth may also come to you and yours.

Film clouds the teeth

Your teeth are coated with a viscous film. You can feel it with your tongue. It clings to teeth, enters crevices and stays. It forms the basis of dingy coats.

The tooth brush used in old ways does not end it, so nearly everyone has suffered from that film.

It is the film-coats that discolor, not

the teeth. Film is the basis of tartar. It holds food substance which ferments and forms acids. It holds the acids in contact with the teeth to cause decay.

Germs breed by millions in it. They, with tartar, are the chief cause of pyorrhea. Thus most tooth troubles are now traced to film.

Now you may combat it

Dental science has long been seeking a daily film combatant. Now two effective methods have been found. Able authorities have proved them by many careful tests. Leading dentists, nearly all the world over, now advise their daily use. A new-day tooth paste has been per-

fected, to comply with five modern requirements. These two film-combating methods are embodied in it. This is the
