#### GOOD FOR SALEM AND STATE FAIR

There is a movement looking to the opening of North Seventeenth street through to the state fair grounds-

And it should succeed, if it will result in the making of another paved street leading to the state fair.

In accomplishing this desirable result, there would be an expansion of the residence district of the city, a consummation that is worth considering, for the way Salem is growing there will before long be felt a dearth of lots in sections adapted to the construction of modern homes.

A paved street to the state fair grounds, providing for an entrance gate near the new pavilion, would very materially relieve the congestion at the other gates, and prevent serious jams of traffic on the streets leading to them. The movement fic. mentioned ought to succeed.

Another thing: Hon. T. B. Kay has recently become the owner of the Bonham tract of land on Market street, and some land in addition that was needed in its development. In buying the Bonham tract he acquired the beautiful grove near the Englewood school. There is about three acres of land in this grove, and Mr. Kay is willing to give it to the city for use as a taken. park, if the city will attend to some necessary paving work of the streets there, and to be opened in the tract.

This offer deserves attention, and action. Salem will never have enough parks. She must acquire those that are offered, on such advantageous terms.

#### PUBLIC SERVICE AND ADVERTISING

At a meeting of the American Electric Railway association in Atlantic City week before last, one of the speakers, Charles Elmquist of St. Paul, pointed out as a favorable sign that whereas only 30 of the companies represented in the convention were using advertising as a means of increasing business three years ago, today 300 companies are doing it-

Recognizing that street car and interurban service is a commodity, and as such a suitable subject for newspaper exploitation through advertising.

Public service corporations in general are advertisers, and those among the number whose destinies are directed by men of vision are making advertising a vital part of their business-Realizing that their profits, as in other business, are in

And advertising is the world's greatest salesman. Every consistent advertiser in Salem, having something of merit and value to offer to the public, and backing up the printed word with high class service, makes not only a possible immediate profit-

He also makes a good will increase in the value of his business, and a good will increase in prestige for his city. He makes Salem stand out as a live city, desiring to extend and improve its connections. The same is true of the advertisers of any city. The advertisers are the city builders. They help every man in the city, from capitalist to laborer. They put value in all property, from the most prominent corner lot in the business section to the smallest parcel in the remotest suburb.

#### A PROPHECY

A couple of days after his dismissal as warden, Johnson Smith came to the writer and stated that he wanted to make a prediction. He asked that it be remembered. His prediction was that within two weeks after his dismissal the same guns that had been trained on him would be trained on Cleaver. "These fellows will go after Cleaver's scalp the same way they went after mine," he said.

The prediction is being verified already. The Portland papers have turned their guns on Cleav-

hitherto unpublished—Eleanor T. It is natural for one to ask, if water carrying cyanide in MacMillan, Portland, secretary of solution is poured over rock containing gold will dissolve the gold and carry it away in solution, is it not fair to assume that there is some substance in some form in the divine life or in the ether that under the direction of some wise intelligence could be made to penetrate the human body and dissolve a cancerous substance existing there either in the tissue or in the blood, and remove it as completely as the cyanide solution removes the gold from the rock, and leave only the normal, healthy tissue in the body? Such a substance need not affect or injure the healthy tissue any more than the cyanide solution affects the rock in which the gold is held. In such cases if all the cancerous or other life destroying substances were removed and the healthy tissue left, the body might resume its normal condition and human life be prolonged.

> After all God is the great, the all knowing chemist. It is reasonable to believe that He has prepared and that there exists under His divine law a remedy and corrective for every abnormal and disturbing condition that enters into life in any form anywhere. What man needs is to develop capacity to know and make use of these divinely established corrective powers. Man has learned how to remove an infected tooth that if left in the mouth might poison and destroy his physical life. The horse has not this knowledge. But man has not yet learned how to take advantage of the multitude of other provisions God has made for his protection and development. As he grows in wisdom and godliness these new possibilities and powers will reveal themselves to man, and when he understands them he will know that there is a divine law under which every imperfection and defect can be removed from human life as easily as gold can be extracted from its rock container. The work that tom dividing the face into halves do not ink the eye, nose and lies before man is to equip himself to know God and work

## How to Get Around Afoot

NEW YORK, Oct. 20 .- The metropolis is forgetting how to walk. The transit commission which today made public figures to show and where the West begins and that New York's subway, elevated and surface lines carried 90,893,-000 more passengers last year than the year before, believes an "increase in riding habit" is responsible.

Statisticians estimated that the new Yorker took ten times as many rides last year as he did in the simple days of 1860. Now each resident, according to the average, rides 456 times a year. In 1860, he rode 43 times.
