Society

The West Side circle of the ladies' aid of the Jason Lee Methodist church met at the home of Mrs. Nellie Knox Friday afternoon to elect the new officers for the coming year. Mrs. C. T. Loveland was chosen president, Mrs. Charles Dennison, vice president; Mrs. Alfred Vick, secretary, and Mrs. Richard Erickson, treasurer, with Mrs. Nellie Knox, press correspondent.

The ladies of the circle are making up a miscellaneous box to be sent to the children at the farm home near Corvallis, and every member or friend of the children is urged to bring or send something in the line of fresh or canned fruits, toys or clothing for children from the ages of four to sixteen years. The articles should be left at the home of Mrs. A. J. Vick, 1495 North Liberty street, not later than Friday, December 14.

As a surprise to her many friends here comes the announcement of the marriage of Miss Loy- al Gray to Mr. W. H. Odell which occurred in Oakland, California, on the twenty first day of November. Mrs. Odell is a graduate of Salem high school (class of 1922) and was prominent among the school and social activities. She later attended Willamette university. Mr. Odell is in the service of the government and is stationed at San Diego for the winter. Mr. and Mrs. Odell expect to make their home in Portland, Oregon, after next June.

Something different in the way of style shows was the playlet, "Treasures of the Hope Chest," staged by the underwear department of Miller's store Friday night, in which the models displayed dozens of filmy things in all the dainty and luscious shades and colors. Negligees, breakfast jackets, boudoir caps, "undies" of every imaginable mode, some tailored, others ribboned and lace-trimmed—all brought forth a chorus of rapturous "oh's" and "ah's" from the spectators.

Over three hundred women of Salem and the vicinity responded to the invitations sent out by the store and were ushered through locked doors behind drawn blinds into the ready to wear department where, on an attractively arranged improvised stage, the models posed and proucted, demonstrating the beauty and virtue of the numerous pieces.

Mrs. Monroe Gilbert spent Friday and Saturday in Portland on business. She found time to visit Miss Blanche White and Miss Dorothy Eichard in their little "Color Cupboard" art shop on Sandy boulevard between Fifth and Fifty-first streets. The entrepreneurs report that a number of orders have come into the shop since the opening last month, their latest being an order to decorate six kitchens in a new apartment home in the Rose City park district. A number of Salem friends have been visiting the shop, and all are enthusiastic in the praise of its originality and artistic showing.

Mrs. Robert N. Stanfield arrived in Salem yesterday to be the house guest of Dr. and Mrs. William Lytle for a short time before leaving for Washington, D. C., where she will spend the winter.

Mrs. J. F. Smith left yesterday morning for San Francisco where she will visit for a short time before continuing her journey to Los Angeles where she will be a guest at the home of her daughter, Mrs. V. J. Cox, until some time in February when she plans on returning to Salem.

The five fraternities connected with the Willamette university held open house last evening when between the hours of seven thirty to eleven o'clock almost five hundred college students, members of the faculty and townspeople visited the houses where they were conducted through on an inspection tour and later served with light refreshments in the form of punch and wafers. Open house is one of the large events on the social calendar of the university, and it has been much looked forward to by all the students. The sororities will hold their open house Saturday, December 15.

The Salem assembly of United Artisans are planning an all-day bazaar Thursday, December 13, to be held in the IOOF hall, over the Opera House pharmacy. In addition to articles on sale a chicken dinner will be served from 11:30 until 2 o'clock, designed particularly to meet the needs of business men and women.

Eight booths will be established and a variety of articles of wearing apparel, fancywork and cooked foods and candies will be offered. Card tables will be available for "500" and bridge, with a nice prize to be offered the winners. Refreshments will be served to players at 4 o'clock.

Proceeds from the bazaar will help send the drill team to the competitive drills in Oakland, Calif., next August in which time there will be \$500 in prizes offered. The Salem assembly is anxious to capture one of the main prizes.

In addition to the bazaar, a

series of card parties and dances are planned for the winter. All Artisans who have not yet been solicited are urged to telephone Mrs. Terwilliger, 724, and state what articles they are willing to donate.

Two Are Employed By Income Tax Department

Krues Montague of Portland, formerly with the internal revenue department, has been selected by the state tax commission to assist in the organization of the state income tax department. It is probable that Mr. Montague will remain in the department permanently.

The commission is meeting almost daily now preparing for the organization of the new department. Governor Pierce explained that Montague is not to be the head of the income tax department; but said Earl Fisher, state tax commissioner, will be the head of the department.

In addition to Montague the commission will be assisted by G. R. Harper, a Portland tax expert, who has volunteered his services and who will work without pay.

The first job ahead of the new employees will be the preparation of blank forms for the returns. Governor Pierce and Secretary of State Koser will go to Portland next week and submit tentative typewritten forms to several attorneys whose opinion will have considerable weight. It is said these will be men who supported the income tax bill. The governor believes the forms will be off the press about December 1. They will be mailed out to the people of the state the first week in January, and it is expected the returns will begin to come in immediately.

Big—How is your business getting on?
Dix—Much better. It's gone from worse to bad.—Boston Transcript.

What Is Your Dream Content?

Psychologists are discovering that the dream content of a radio fan is fearful and wonderful. One college professor reports that the abstract subjects about which his dreams once centered, no longer float up from their subliminal retreat. Now he awakes every day with a gnashing of teeth to the remembrance of some haunting doggerel of his slumbers such as this:

Radio! Radio! where have you been?
Everywhere, anywhere, waddo you mean?
Have you been up to see old planet Mars?
Farther than he ever twinkled—
My stars!

A much freckled lad told us only yesterday that his experiences are very similar, but curiously enough the boy's dreams show indications of more erudition. They go about like this:
Oh why, Hawaii, can you hear With smaller set and keener ear Than Frisco, Seattle or Bend
The jargon that the youngsters send?

Have You Got It?

Another unexpected development in radio is the malady known as "radio ears" which is proving quite as pronounced in its effects as "housemaid's knees" or "drossmaker's hump" but is much more difficult to stamp out because the patient invariably refuses to take off his earphones long enough to receive treatment. One youth in the advanced stages was pounding out the following not long ago, while the specialist whom his parents had summoned sat by helplessly:
You bugs who listen in on this In Canton, O., or Jackson, Miss., Snap out a radiogram and say If you wish a Radi-O every day.
Signed, Wireless Bug.

Is it possible to measure the voltage of an electric charge by the distance that a spark will jump?

It is possible to do so with fair accuracy if the sparks are between balls or other rounded objects, not pointed or sharp-cornered ones. For the best results the balls should be as large or larger than the gap between them. The following table gives the approximate voltages for sparks of different lengths between four-inch balls:

One-tenth inch 8,000 volts
One-quarter inch 20,000 volts
One-half inch 40,000 volts
One inch 76,000 volts
Two inches 125,000 volts
Three inches 165,000 volts
Four inches 200,000 volts

About about 200,000 volts the readings by this method are not sufficiently reliable.

Uncle John Breaks Into Verse. In the Radio News for December, Uncle John of KHJ, Los Angeles, gives us some clever verse. We didn't know he could do it, did you?

Electronic Reactions of Abrams

Highly Endorsed by Hahnemannian Committee — Report of the Committee Appointed in 1922, by the International Hahnemannian Association to Investigate the Abrams Methods of Diagnosis and Treatment

This committee consists of Dr. Eugene Underhill of Philadelphia, Dr. Henry Becker of Toronto, Dr. Harry B. Baker of Richmond, Dr. Benjamin C. Woodbury Jr. of Boston, Dr. Harvey Farmington of Chicago, and Dr. Guy Beckley Stearns of New York City, chairman. Of this committee, Dr. Baker and Becker had already attended Abrams' clinic and experimented with the methods and Dr. Woodbury was familiar with the theories as he had previously visited the clinic. Dr. Underhill and Stearns went to San Francisco and during a considerable period of time were in daily attendance in the clinics. While there, with other interested physicians, they engaged in outside experiments to determine if there was any relation between the reactions of Abrams and the curative remedy.

Mindful of the duty as a committee, all of its members who have done actual experimenting have kept in constant touch with one another by letter and have met in conference, in part or as a whole, several times. In this way each man's experiments have been checked by all the others. Also this committee has kept informed regarding the controversies which have found expression in various public prints. Much of the literature in favor of the methods has been highly colored. Some of it, obviously commercial. Notable exceptions are the articles by William E. Boyd, M. D., of Glasgow, describing experiments which he had conducted; the book of William F. Hudgings, an exponent and simplifier of the Einstein theory, and the report of T. Proctor Hall, M. D., to the British Columbia Academy of Science.

On the other hand, in the commendatory articles beginning with the editorials and pamphlets of the American Medical Association Journal and continuing the articles in Hearst's International, and in the Dearborn Independent, we have not found any statement which was of value for determin-

ing the basic facts. They are highly prejudiced and condemn without evidence.

When this committee began its work, the conservative part of the profession had already become prejudiced against a fair investigation. Partly from natural antipathy to new methods which in any way appear revolutionary in character, but doubtless largely from the fact that the kind of publicity resorted to had tended to throw discredit upon the methods whilst attracting a horde of opportunists who were concerned only with personal benefits. This created an embarrassing situation for the members of the committee, but we determined not to allow this circumstance to hinder in ascertaining and presenting the basic facts to this association.

The original committee has been augmented by associates who have joined in the experimental and practical work. Associated with Dr. Baker have been Dr. C. W. Tabor and Dr. John M. G. Ryland; with Dr. Becker, his daughter, Dr. Beatrice Becker; with Dr. Underhill, his son, Dr. Eugene Underhill, Jr., and George Yale Wilson, electrical engineer; with Dr. Stearns, Dr. W. J. S. Powers, Dr. M. Ellings Gora, Dr. J. W. Wraftensmith and Herbert Morris Pilkington, electrical expert and technician.

Abrams' claims may be summed up as follows:

1. All substances give off radiant energy.
2. The energy from the blood of an individual represents all the attributes of that individual including his disease-processes.
3. Each disease and attribute gives off its own peculiar kind of energy.
4. These energies can be transmitted by metallic conductors, can be differentiated from each other by means of coils of wire having different degrees of resistance and the potentiality of each energy can be estimated by arbitrary units of measurements.
5. Each of these energies, when conducted to a living human

subject, causes definite reactions, that identify the energy.

6. The reactions have to do with slight changes in the tone of some of the hollow organs of the body or at least a change that can be detected by delicate percussion, by rubbing the superimposed surface of the body with a glass or hard rubber rod, by a difference of texture of the skin as detected by the fingers and at times by a change in color of the skin over the organs in which the reaction takes place.

7. These energies are of a vibratory character and each disease has its own particular vibration.

8. Certain drugs have a similar vibration to certain diseases and therefore those drugs have a destructive action on the disease to which they correspond, in accord with well-known physical laws.

9. An instrument called the Oscilloclast has been devised by Abrams and it is claimed by him that this apparatus develops a form of energy having a range of vibratory rates similar to the range of rates inherent in the different diseases of the body.

There is but one way to deal with these claims, namely, personal examination and experimentation.

This committee began by investigating the possibility of obtaining the reactions. In presenting the results, we simply submit the facts without entering into any of the controversies regarding the explanation of facts.

Results of the Treatment. We have observed apparent curative effects in some of the most difficult types of cases. We will not burden this report with statistics although we could give a series of a few hundred cases extending back over a considerable period of time. We feel that it is sufficient at this time to report in this general way.

Summary. We have demonstrated that reactions of a very delicate character can be induced by means of the blood of an individual that is brought into relation with an-

other person provided certain conditions are established. From this we deduce that some sort of energy is given off from that blood.

We believe that this energy represents both pathological and physiological processes in the individual from whom the blood is taken.

We believe that more or less accurate deductions can be made as to a diagnosis of the condition from which the donor of the blood suffers and that these conditions can be quite accurately located.

We have demonstrated that these reactions can be utilized in selecting curative measures.

In conclusion: Your committee feels justified in reminding you that, in physical science, what yesterday seemed impossible is today commonplace. The phenomena of these reactions constitute a new field if medical research.

Respectfully submitted:
Eugene Underhill, M. D.
Henry Becker, M. D.
Harry B. Baker, M. D.
Benjamin C. Woodbury, Jr., M. D.
Harvey Farmington, M. D.
Guy Beckley Stearns, M. D.—
Chairman.
—Homeopathic Recorder, October 15, 1923.

Minton Named Head of Horticultural Society

THE DALLES, Ore., Dec. 8.—(Special).—C. D. Minton of Portland, formerly a secretary of the Oregon Horticultural society, was selected president of that body in the session held here. L. T. Reynolds was re-elected vice-president; C. L. Long of the Oregon Agricultural college was chosen as secretary-treasurer and Colonel Henry E. Doach of Portland was re-elected on the board of trustees.

Inclement weather has caused attendance at the sessions of the society here to be poor. A banquet was tendered members of the society tonight at the civic auditorium by The Dalles chamber of commerce. The sessions will close tomorrow.

Jerry—Have you ever come across a man who, at the slightest touch, caused you to thrill and tremble in every fiber of your being?
Mary—Yes—the dentist.—London Passing Show.
