CHRYSLER CAR AT PORTLAND SHOW

O. B. Gingrich Tells Some of the Strong Points of Latest Car to Appear

One of the big surprises of the Portland automobile show was the showing of the new Chrysler line of automobiles, according to Oscar B. Gingrich, manager and proprietor of the Gingrich Motor & Tire company.

Mr. Gingrich had the following to say when interviewed by a representative of The Statesman: "V. C. Rush, one of our salesmen, and myself went to Portland Friday of the week of the auto show anticipating nothing unusual, inasmuch as we have always taken in the Portland show and of course expected to see many new and beautiful cars as usual.

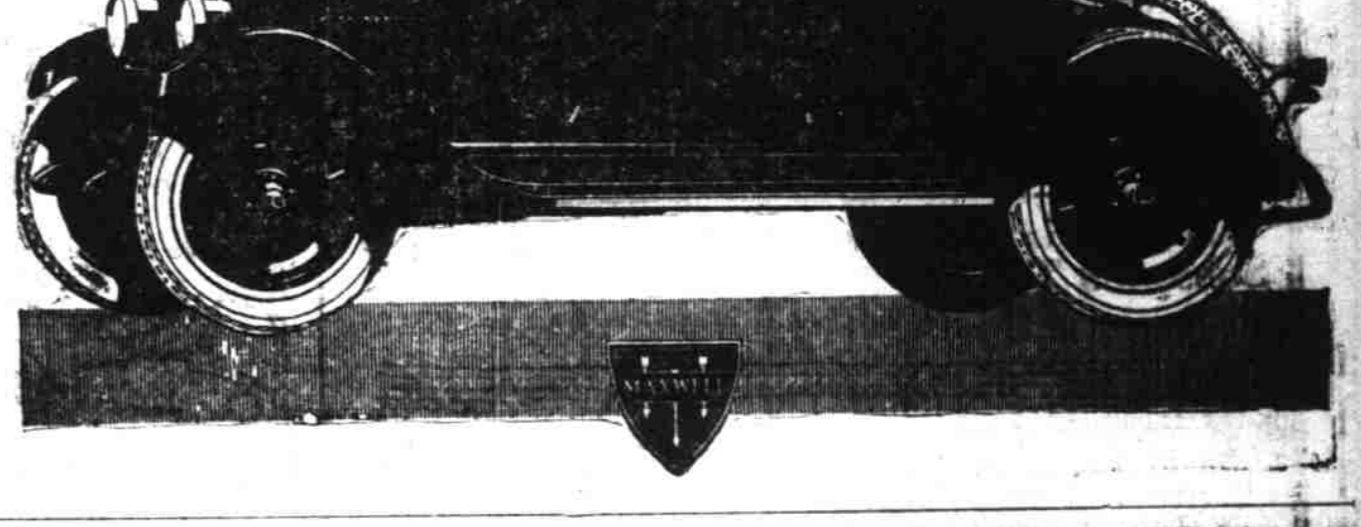

Very few yards, brought the car to a stop. Another noticeable feature was the lack of throw from one side of the car to the other while rounding curves. Of course it was dark before we returned to the auditorium and in order to get another good look at the car we went inside. This time it was not so easy to get a close-up of the car. It is not exaggerating when I say that literally hundreds were seeking an opportunity to get a look at the Chrysler cars.

ELECTRICITY MAY UNCOVER MILLIONS IN ALASKAN GOLD

ANCHORAGE, Alaska, Jan. 25.—The use of electricity, generated from coal slack in the sub-bituminous mines of the Healy fields, is one of the plans under consideration as a means of uncovering the estimated \$200,000,000 in placer gold believed to lie in the gravel of the Tanana valley around Fairbanks, Chatanika and adjacent points.

The proposal is being investigated by Professor Charles E. Bunnell, president of the Fairbanks agricultural college and school of mines. Experts have expressed the opinion that electricity will solve a problem that has been baffling.

When necessary, would be reduced greatly in cost by the use of an electric pump. If electricity is employed, it will be transmitted a distance of approximately 110 miles to Fairbanks and distributed over an area of 50 square miles. Lack of capital has retarded the development of this region. It is held that the cheapness of the electricity would remove this obstacle.

Club Coupe

Motor company, Portland, explained the mechanism of the Fordson in detail and how the different parts are made at the factory. In the evening at the Marlon hotel a large number of people witnessed the Ford motion pictures, entitled "The Ford Age." Hundreds of the most interesting parts of the Ford plant were shown, including the manufacturing of the motors, making of the glass, and the much talked-of progressive assembly. The Highland Park plant now employing 60,000 men proved a very interesting feature.

NO SQUEAKS NO RATTLE NO TROUBLE

If You Buy a

Nearly New Ford

We do not handle worn out cars that have been turned in on new ones, but buy for cash nearly new Fords from people who need the money.

- 1923 Ford Touring, cannot tell from new; save \$100.10 \$150
