| Grapes, etc., April 24.         |  |

## CRUDE DRUG GROWING

Oregon must eventually become the drug garden of the world."

That is not the idle assertion of a tyro or a dreamer.

It is the statement of one of the leading authorities of Oregon, Prof. F. A. Gilfillan, assistant professor of pharmacy of the Oregon Agricultural college.

We lead in peppermint now; making menthol of the highest quality produced in this country, and the greatest number of pounds to the acre—

And we lead in cascara bark—

And we can lead in a long list of articles needed for making the medicines of commerce.

This is a great field.

Where is the man to take the lead in its development?

DID YOU KNOW that Salem is the market of the crude drug supplies for Oregon; that every farm in this district ought to have a drug garden; that we are already leading in peppermint production of first quality; that cascara sagrada has to be cultivated or it will run out, and the world must have more and more of it; that the Dean of the School of Pharmacy, Oregon Agricultural College, has repeatedly said that drugs can be grown at one-tenth the expense and with twice the yield that they can be produced in Michigan and Minnesota, and Prof. F. A. Gilfillan of that department says Oregon must eventually become the drug garden of the world, and that the possibilities are here for the development of a great drug garden industry?

## DRUG PLANTS UNDER CULTIVATION AS LISTED BY OUR UNCLE SAMUEL

There is a Bulletin, Issued By the United States Department of Agriculture, Which Gives Directions Concerning the Growing, Harvesting and Treatment of the Plants Needed in the Crude Drug Trade, Which May Be Grown and Supplied By Our Farmers

(The United States Department of Agriculture recently revised its Farmers' Bulletin 663, which was issued several years ago, entitled "Drug Plants Under Cultivation." "Interest in the possibility of deriving profit from the growing of drug plants is increasing yearly," says this bulletin. It mentions the fact that annually large sums of money are expended for crude drugs imported from foreign countries, where they are produced under conditions of soil and climate resembling those of many localities in the United States; and increased attention is being directed to the home supply. "At the close of the year 1919 (after the war) there existed a general and widespread shortage in botanical crude drugs, and prices in consequence had reached unusually high levels," says this bulletin. (The prices are still generally high). Following is a list of drug plants, made up in this bulletin "to give information concerning their culture which may be helpful to persons who are considering the production of drug plants on a commercial scale." (Lack of space forbids anything but a bare mention of the plants). Following is the list: Aletis, star-grass, or true unicorn root; acelite; althaea, or marshmallow; angelica; anise; arnica; belladonna, or deadly nightshade; blue flag; boneset; burdock; calamus, or sweet flag; calendula, or pot marigold; German camomile; Roman or English camomile; camphor tree; cannabis, or Indian hemp; caraway; cascara sagrada (in cultivation the trees are pruned annually, and thus a crop of bark harvested each year, instead of killing the whole tree, as is done in the wild state, which is making it necessary to make plantings, which is now being done in British Columbia, and will no doubt be done in Oregon for there is nothing "just as good.") Castor beans; catnip; conium, or poison hemlock; cor-

other mall matter; do not place near hot pipes, stoves or radiators, nor expose to cold winds or hot sun. As far as possible, protect from all extremes of heat or cold." "As already suggested, where the shipments are not large and parcel post delivery is more frequent and reliable, it can certainly be employed to advantage.

### Why Cannibalism in the Chickens

Writing in Poultry Life, Fred H. Cockerill gives the principal causes of cannibalism among chicks as lack of animal food, sun spots on the floor (causing toes to look attractive) overfeeding (causing inactivity) and being too closely confined. He adds: "In cannibalism, however, once it gets started, the poultryman has a real problem. The best method of combating it is to darken the room, put several inches of cut straw or other similar material on a brooder floor to encourage exercise; slice beets, potatoes, or other succulent roots and feed to chicks, also to encourage exercise, and get them out of doors as much as possible. Several instances of the successful use of common salt in the drinking water to stop cannibalism have come under my notice. In this method a level teaspoonful of salt is put into each gallon of water, and no other drink is given. Inactivity is probably the greatest contributing cause of this pernicious habit."

## How to Ship Baby Chicks By Mail

In Oregon the bulk of day-old-chick shipments are sent out by express. In cases where the transportation covers considerable numbers, this is probably the most satisfactory method, but where the number is small, recourse can now be had to parcel post, provided the conditions of the federal post-office regulations are complied with. For the benefit of purchasers of day-old-chicks to be delivered by parcel post mail, and also in the interest of shippers, we quote from the regulations:

"For the present, parcels containing day-old-chicks must not be insured. Shipments of day-old-chicks are to be transported outside of mail bags. It is recommended that the shipper affix a legibly written or printed notice to each such package, giving the following instructions, which postal employees are to carefully observe: "day-old-chicks; this side up; handle with special care; do not give food or drink to the chicks in transit; dispatch as quickly as possible and deliver to addressee promptly upon arrival at office of destination. Do not place packages in mail bag or cover with

Willard Martin whose name she is alleged to have forged to letters. The other photo shows the home in West Philadelphia where she lived by day with her first husband, Samuel Beswick,

## VALUE OF GREEN POULTRY FEEDS

It Lies in the Material That Makes the Feed Show Its Green Color

(While the following applies especially in its present application to California conditions of this season, it is of value here in the Salem district—where, however, the matter of providing green feed is a simple one. The writer is Henry W. Kruckeberg, poultry editor of the Los Angeles Times). "As the season is still somewhat short on moisture, it is important that poultry farmers and back-lotters grow at least a portion of the green feed that their fowls will require before another planting season. This is not over difficult, provided there is water available for irrigation. Owing to scant rainfall this year, the usage of water will be somewhat curtailed before the summer is over, hence intensive methods in the cultivation and care of plants will be in order. In some localities crops (alfalfa, kale, clover, barley, etc.) have made a poor growth, and in some instances will be a failure. In lieu of these, grow crops of Swiss chard and stock beets. If conditions are negative to these crops, then grow sprouted barley, which can be done in a small space and with little expense. In the Sonoma egg laying contest, sprouted barley was a large factor in the green food supply. M. C. Clayton, superintendent, partitioned off a small room, 8 by 10, and installed racks to hold sixteen wire-bottomed trays, each 24 inches by 36 inches and 3 inches deep. Each tray of the above size has an inside area of 748 square inches and constitutes one day's green feed for 750 hens. The barley is not fed until the green sprouts reach a length of four inches. The value of green feed lies largely in the chlorophyll or green coloring matter, and this is not present in any vegetable unless the color of the plant is green. To sprout barley, first soak the grain in warm lime water forty-eight hours; then pour off this water and rinse with warm lime water again. Now spread the soaked grain in the trays to a depth of about one inch and place the trays in a warm, light room (temperature 65) then sprinkle with warm water twice a day and stir the grain until the white roots are well started. Continue the watering until the sprouted grain is fed. Ten pounds of barley will in twelve days furnish about thirty pounds of wonderfully appetizing succulent green feed. Feed your laying hens all the green feed they will eat and you will be repaid with good health, higher production, lower mortality and greater profits. Hens should consume about equal parts by weight of grain, mash and greens. "In the matter of growing crops, methods of planting, care and culture, consult the seed catalogues. It is not so much a matter what you plant as it is that what you do plant in modest variety and of the standard green foods recognized by poultrymen. By putting the soil in good tilth and with water available for irrigation, it is not an overdifficult task to grow liberal quantities of green poultry feed on a comparatively small area of ground."

When a candidate says he stands four-square, he only means that he covets three squares.

away with" the following quantities: 19 pounds dry oats; 36 pounds corn and wheat; 22 pounds mash, dry or moist; 18 quarts of milk; 3 1/2 pounds of shell and 25 pounds of kale and other greens.

It will be noticed that the difference is slight and is revealed chiefly in the first two items. If both classes give record performances it would almost be a fifty-fifty proposition. What the Leghorn saved in food would be offset by the larger carcass of the Rocks or Reds, when either or both came to the end of the chicken trail. At any rate the line of demarcation would be small.

## NEW CORPORATIONS

The following articles of incorporation were filed here yesterday: A. B. Steinbach estate, Portland; incorporators, Cecelia Steinbach, Gertrude Worth, George W. Joseph; capital \$100,000. Baker Motor company, Baker; incorporators, J. L. Masters, C. L. Perkins, W. D. Carter; capital, \$10,000. Cove Cooperative Cherry Growers. Cove; incorporators, W. A. McNeill, A. N. Antles, R. H. Dangle and others; membership fee \$1. Bartholomew company, Portland; incorporators, E. I. Bartholomew, Herbert S. Stafford, H. H. Isaacs; capital \$50,000. Western Handle company, Portland; incorporators, Joseph Sinton, Edgar Field, D. B. Knapp, capital \$100,000. Notice of increase in capital from \$50,000 to \$100,000 was filed by the Side Ray Spotlight company of Portland. Notices of dissolution were filed by the Pruto Garment company of Portland and by the Portland Electric Power & Light company. Under the blue sky act the following permits were issued: to

## WHY NOT SALEM A BIG SQUAB CENTER?

Haywards, California, is in the Race for the First Place on the Coast

Haywards, Alameda county, California, is claiming to be the squab pigeon center of the Pacific coast. Why not Salem? The same conditions that make ours the best poultry section in the world will apply to the production of pigeons. Commercially the growth of the pigeon industry in Alameda county had its inception there 12 years ago. In 1912, the plant of F. E. Reid was the only shipping squabs to market with any regularity. The output at that time averaged around two dozen a week; at the present time 200 breeders, residing within a radius of five miles of the city of Hayward, are shipping more than two tons of live squabs weekly, or in excess of 4000 birds. At present the market is largely local, San Francisco absorbing practically the entire output in a rapidly developing trade. Only two of the larger breeders own lofts containing as many as 1000 mated pairs, placing them in a position to make quantity ship-
