

BENEDICTINE ORDER PROPOSES \$10,000,000 INVESTMENT IN SCHOOL BUILDINGS AT MOUNT ANGEL

Courtesy of the Oregon Journal.

The above cut represents the architect's perspective of a proposed group of buildings at Mount Angel for the Benedictine Abbey. The design was prepared by Paul Noven, under direction of Ernest Kroner. The cost of the completed project is estimated at \$10,000,000.

**MT. ANGEL COLLEGE AND SEMINARY
HAVE MAJOR PROJECT OF BUILDING
IN THIS DISTRICT AT PRESENT TIME**

It is in the Nature of a Dream, and a Wise Planning for the Future; But it is a Dream That Will Come True, and the Beginnings of Which Consumption Will Begin to Show Themselves in the Very Near Future—Will Add Greatly to Our Prestige as Educational Center

The major project at the present time in the whole great and world famous educational district of which Salem is the center, in the way of building development for an institution of learning, is that of the Benedictine Order for Mt. Angel College and Seminary. This is saying a good deal, because every educational institution in this district has a project more or less ambitious.

The plan for Mt. Angel is represented in picture form herewith, through the courtesy of the Portland Journal, which kindly loaned the cut to The Statesman; printed in that paper in its issue of July 13.

The Three First

The group of buildings, when the whole plan shall have been brought to fruition, will include a new church, a faculty building, a science building, a library building, and others.

The most urgent needs are for a science hall, a library building,

and a church, and it is hoped by the leading members of the community that some progress may be made soon towards providing beginnings on these. It may take a long time to bring true the whole dream. But, once the program is definitely adopted, the hand will be to the plow, and there will be no turning back. The monumental structures already on that beautiful hill, that would be called a mountain in most countries, are an earnest of what may be expected concerning the larger proposed undertakings. There is a two year pre-law course, and the same for engineering and journalism. There is a junior college department; providing high school work. There is an academic department, with the usual requirements and courses. The institution has a thoroughly trained faculty of over thirty. There is a postoffice at the institution; St. Benedict, Oregon. The opening of the coming

The College Efficient

Mt. Angel college is situated one mile east of the town of Mt. Angel; on the Southern Pacific and Willamette Valley Southern railroads; 40 miles from Portland and 14 miles from Salem, with paved highways all the way, in different directions.

It was founded in 1887; chartered by the Oregon legislature. The seminary for training candidates for the priesthood was opened the following year. The buildings are modern; up to the minute. They are wonderfully attractive; solid as the rock of ages; fashioned of the native gray stone. There are hospital facilities; two dormitories; 50 private rooms for students; dining hall; museum; physical laboratories; biological laboratories—everything up to date.

The largest private printing plant west of Chicago is there; with a double supplement Hoe press. The newspapers printed there have nation wide circulation. There is a large gymnasium; fine athletic field.

There is a four year course leading to the degree of bachelor of arts; a two year pre medical course; a two year pre-law course, and the same for engineering and journalism.

There is a junior college department; providing high school work.

There is an academic department, with the usual requirements and courses.

The institution has a thoroughly trained faculty of over thirty.

There is a postoffice at the institution; St. Benedict, Oregon. The opening of the coming

school year will be September 15 for registration; formal opening the 16th.

Mt. Angel Academy

Mt. Angel Academy and Normal, at Mt. Angel, Oregon, is a first class boarding and day school for girls. This institution was established in 1882 at Gervais; moved to Mt. Angel and opened there in September, 1888. It is conducted by the Benedictine Sisters. Last year it had 120 to 130 day pupils and boarders. Teaches all grades; gives four years of high school and two years normal training, and has a commercial course. Has fine buildings and beautiful grounds. Its school year will open September 8.

**EARLY SPRAYS TO
KILL THE APHIDS**

For Black Ones on Beans and Cabbage; Green Ones on Cabbage and Kale

Beans covered with black aphids just as the pods are forming, and now you have to put the tobacco spray on and soil their bright clean look?

You say the pests just popped up over night like Jack's beanstalk, and you had no chance to get them till they began swarming on the new leaves and pods?

It may seem that way, but doubtless isn't. It is more likely that a few "homeseekers" hit the undesirable of the leaves a long time ago before the vines started to run, and began colonizing. It so happens that aphids develop just as rapidly when not seen as when seen by the grower. Sometimes it is only a leaf here and there that is infected, and even the observant grower may easily lift leaves and still miss finding the early arrivals already on the ground—or leaf, rather.

Hence the desirability of early sprays, preventive, largely, for black aphids on beans and squash, and green aphids on cabbage and kale, in all districts where these pests attack. If this early spray is thrown against the undesirable of the lower leaves a little before the beans and squash start to vine, it is doubtful whether the pests ever overtake the plants until the best of the crop has been picked. On the young cabbage a very little spray will cover the entire plant, and if put on again occasionally till the plant is nearly grown the crop will be nice and clean, also larger and more tender.

A western Oregon grower referred the question of the early preventive spray for these crops in bad aphid regions to Don C. Mate, experiment station entomologist and got the endorsement of the specialist.

It's the early spray that gets the aphids.

**LENA BELLE TARTAR
A LEADER IN FIELD**

She Occupies a Very Important Place in the Salem Musical Circles

Lena Belle Tartar, contralto soloist and teacher of singing, has been identified with the musical life of Salem for the past seven years. During this time she has given freely of her talent and energies toward charitable enterprises and community uplift.

For four years Miss Tartar was president of the Salem Music Teachers' association. During her regime this organization reached its climax of activity, presenting and financing many community programs, artists, concerts, and putting over the most successful convention of the state music teachers held up to that time.

Five years as director of music in Salem high school has given Miss Tartar opportunity to establish a reputation as a conductor that is known throughout the Pacific northwest. Students from the Salem school won over all other competitors in the Oregon-Washington high school musical tournament last spring. Two beautiful trophies are now on display in the school, as the result of these victories. Each year one or more concerts or operas are given.

**USE SULPHUR TO
HEAL YOUR SKIN**

Broken Out Skin and Itching Eczema Helped Over Night.

For unsightly skin eruptions, rash or blotches on face, neck, arms or body, you do not have to wait for relief from torture or embarrassment, declares a noted skin specialist. Apply a little Mentho-Sulphur and improvement shows next day.

Because of its germ destroying properties, nothing has ever been found to take the place of this sulphur preparation. The moment you apply it healing begins. Only those who have had unsightly skin troubles can know the delight this Mentho-Sulphur brings. Even fiery, itching eczema is dried right up.

Get a small jar of Rowies Mentho-Sulphur from any good drug store and use it like cold-cream. Ad.

by the music department, and from these entertainments over \$1000 have been earned and this amount has been spent for music scores, books, magazines and talking machine records. This coming year Miss Tartar will devote her entire time to music instruction, featuring classes in harmony sight singing, chorus, and orchestra practice. The subject of music appreciation will also be given special attention.

Personal pupils of Miss Tartar are in constant demand for social, religious and educational programs. In this work a definite aim is made to please the audience vocally and to adapt the selections to the hearers.

Miss Tartar has investigated the normal methods and devices of leading vocal teachers of the Pacific coast and eastern centers and through personal contact has learned to put into practice the best ideas gleaned from these investigations. Each year Miss Tartar spends several weeks in personal study with masters of singing and to the student atmosphere of her studio is fresh and constantly abreast with musical progress.

As contralto soloist Miss Tartar has served two years with the Cherrian band at the open-air concerts. Each year she appears on one or more local concert programs of a professional nature, as well as filling out-of-town engagements. For five years Miss Tartar has been soloist at the First Church of Christ, Scientist.

Miss Tartar is socially identified as president of the Civic Music club, members of the Eastern Star and past president of chapter A. B. F. E. O.

The multivane fan for recirculating the air in the new type of drier developed at the Oregon experiment station, is the most economical and efficient. It is small and compact, economical in horse power, and delivers a larger volume of air than any other type of equal size.

Any time a platform committee wishes to avoid effort, it might adopt the Ten Commandments.

**FARM REMINDERS
FROM THE COLLEGE**

**Doubled Crops By Drainage;
Short Finishing Period
for Pigs, Etc., Etc.**

(Following are excerpts from a current bulletin of the department of industrial journalism of the Oregon Agricultural college.)

All ages and varieties of fruit trees are attacked by flat borers. The young trees probably suffer the most seriously in Oregon, says the experiment station. A high

percentage of young trees are killed their first or second season, especially when high temperature and prolonged drought occur. The borer attacking apple trees works mostly just under the bark, at or above the surface of the ground.

Drainage in experimental fields at O. A. C., has doubled the crop yield. Before drainage on some lands the yield was so small that profit was uncertain. The larger crop obtained after drainage has made good profits.

Most pigs marketed in Oregon are light weight, and are therefore growing as well as putting on fat during the finishing period. To get the best results, careful attention is given to balancing the

Discounting the Count

A COUNT used to be a man in charge of a count of 500 persons to whom he was a sort of overlord. This is not true today because of altered political conditions. We still have Counts, but the Count business has changed somewhat.

Business, of all kinds, has undergone something of a revolution. It was not so many years ago that pack peddlers were the sole distributors and transporters of many of the household articles of the day. Their legs set the limits for most distribution problems in those days.

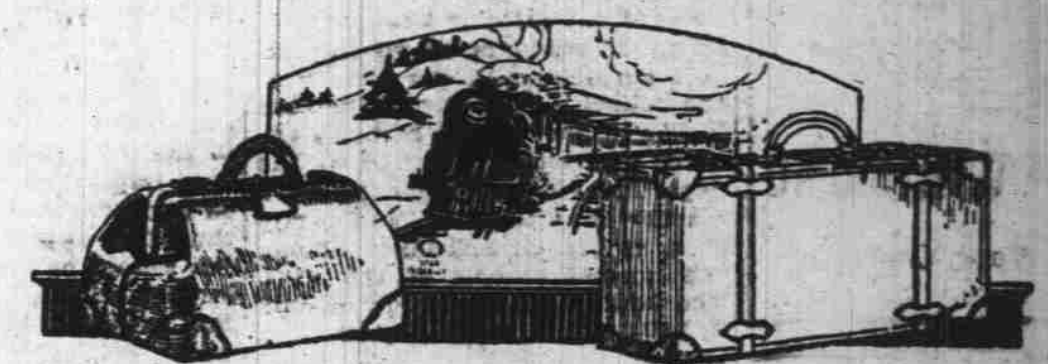

Modern transportation, progressive sales and methods—and advertising—have broken the shackles of time. They make a speedy job of what used to take years. Through advertising many an article has been introduced simultaneously in stores all over the country.

Advertising today is the method used by business to tell you why you should have certain goods and how to identify those goods. The advertisements you find here are a truthful catalog of needed merchandise.

Articles of all kinds and for all purposes are presented in a pleasant way through the medium of type and picture. The outstanding requirements of every member of the family are met by offers of good merchandise of proved value.

Use the advertisements for guidance and you will be a constant gainer.

LUGGAGE SALE

In order to make room for the remodeling of our luggage department—it is very necessary that we practically close out all of our present stock—all dropped patterns and close out numbers are marked very low in order to move them quickly—Let us show you the values we have.
