### A NEW INVENTION

L. O. Dimick of Monitor was in this office Monday with a drawing of his heat actuated circuit breaker, on which he is getting a patent. It is a device to be installed in hop dryers, prune dryers, incubators and brooders, which will give an alarm when the heat becomes either too high or low. Mr. Dimick has installed about 20 of them around the county lately and has something for which there should be a demand. Those he has installed are all working perfectly. It is not a complicated mechanism and will win favor among hop and prune men and poultrymen.—Woodburn Independent.

When a fool has nothing to say he is never satisfied until he says it.
