WOOL BATTS
WOOL MATTRESSES
WOOL COMFORTS

DOES CUSTOM SCOURING AND CARDING

Santiam Cheese Company

MANUFACTURERS OF

"Santiam Cheese"

Industrial Sites

Stayton owes its founding and subsequent growth and development to its favorable location regarding industrial sites and abundant power at low cost. The nature of the plants now successfully operating as shown on this page demonstrates the above truth. Industrial plants seeking new and favorable locations will make no mistake in visiting Stayton.

Retail Establishments

The retail trade has not been over-developed but has kept even pace with the growth of the town. At present it has 4 general stores, 1 hardware and furniture, 1 exclusive hardware, 2 drug stores, 2 meat markets, 1 men's furnishings, 1 shoe store and repair shop, 1 variety store, 1 hotel, 2 confectionery and lunch stores, 2 pool halls and tobacco stores, 1 jewelry store, a moving picture theater, 3 garages, 2 blacksmith shops, 2 service stations, bakery, feed store, and produce house. It also has a first class weekly newspaper with job shop.

Agriculture

Every variety of rich agricultural land surrounds Stayton from river bottom lands to prairie and upland. Each is adapted to some special line of agriculture. Berry growing is especially profitable. Fruits of all varieties are successfully grown. Nut growing is rapidly taking a very important and profitable place. The new flax mill opens another profitable field. Hay and grain have always been among the staple crops, yielding large returns. All types of land may be bought at reasonable prices; land values were never "boomed."

Animal Industries

The wide open range and abundant green feed during at least 10 months of the year makes this an ideal live-stock section. The old lines are rapidly giving way to purebred cattle, hogs, sheep, chickens, horses, bees and poultry. A growing tendency to break up the large land holdings and sell in small lots to encourage diversified farming has stimulated dairying and poultrying which two lines are growing more profitable. No greater opportunities exist in the West for newcomers to profitably enter these fields.

OPPORTUNITY

An inspection of Stayton territory by one with open mind and wide vision will result in such a person finding unusually favorable conditions which will appeal to those of limited means as well as those with large capital. The climate adds many days each year to the productive capacity of men and industries. No extremes of heat and cold to tax the energies; pure air and pure water to insure vigorous and robust health so that each individual is capable of working to maximum production with minimum of effort.

Some 25 or 30 small lumber mills operate in this vicinity. They have an unlimited supply of forest extending 40 miles into the Cascade range. Industrial plants specializing on wood and forest products will find especial inducements to locate here.

The farmer and industrial plant owner will find the field developed beyond the experimental stage and they may enter into profitable production at once. They will find markets for their products and living conditions especially pleasant.
