(By Edward T. Barber)
T. A. Livesley is a standard authority on the hop industry as Webster's dictionary is of the English language. His father was a hop grower in Wisconsin who exported the first United States hops. "Tom" came to the coast about 1887 and has devoted his life to hops, as a grower, dealer and exporter. He has seen the hop industry of Oregon develop from a small beginning to 160,000 bales annually—of which his company handled 40,000 bales—and shrink again, through adverse legislation to the present output of 65,000 bales with 12,400 acres in Oregon. He has seen Oregon hops command the world market, because Oregon produces the best hops grown in the world.

GREAT FORESTS MOTHER OF OREGON INDUSTRIES
(Continued from page 8)
past are being discarded and a wise conservation policy substituted which bids fair to maintain the industry on a perpetual basis as a leader of Oregon industries. The millions of dollars distributed annually by the industries based upon forest materials enters the arteries of commerce and gives life and nourishment to every industry in the state. Through these arteries the vitalizing touch of the lumber interests reaches the income of every citizen of the state and adds to the prosperity and success of all. It is the foster mother of all Oregon industries.

HENRY HARTMAN
Corvallis, Or., Jan. 6, 1925.
(Prof. Hartman, writer of the above, written for this special issue of The Statesman, is associate professor of pomology of the Oregon Agricultural college, and is high authority.—Ed.)

A man of great activity and vitality, he has mastered the hop business as but few others have. He believes that the present restrictive legislation on the alcoholic content of beer is not only the cause of the decline of the hop industry in Oregon but that it is also the cause of many of the glaring and flagrant miscarriages of the prohibition law. That the .02% per cent beer now permitted is so unpalatable and unwholesome that men turn to the fillet of the moonshine still rather than drink it; that the multitude of crimes committed by men under the influence of poison drugs would largely cease if a wholesome palatable beer containing .02% per cent alcoholic content were permitted.

Mae: "Why didn't you encourage him? Didn't you hear him call you 'ma cherie'?"
June: "And didn't you hear me tell him that he was the rasp-berries?"

He believes the manufacture of a .02% per cent beer would not only promote sobriety and lessen crime but that it would add billions of dollars to the productive industry; that it would increase the Oregon hop yield to 200,000 bales and make the hop business the largest and most profitable in the Willamette valley; that this concession to the public would satisfy a demand so as to make the enforcement of the prohibition law possible.

11 TONS BERRIES 3 AND HALF ACRES
These Were Grown on Bushes Planted as Fillers Between Walnut Trees
Editor Statesman:
You have asked me to write something about gooseberry raising, so will give some of my experiences.
First, I live in the red hills at an elevation of about six hundred feet higher than Salem.
In the spring of 1914 I planted a little less than two acres of ground to gooseberries as fillers between cherry and prune trees. My largest crop from this planting was six and one-half tons. Last year (1924) I picked about two tons. I am grubbing these bushes out this winter, as the root borers are in nearly all of the bushes, and besides that the trees are shading them. Besides the gooseberries I picked a good crop of cherries and prunes from the trees on this ground last year.
Not With Prunes
I might say here that I would

not plant gooseberries with prune trees again, because the prunes come into full bearing during the life of gooseberry bushes, and the prune trees are very likely to be stunted. But my cherry trees have done well.
This was old ground when the gooseberries were planted and has never had any fertilizer except one year (1920) I believe it was I put a heavy coat of manure on it.
Some With Walnuts
Besides the above I have three and one-half acres of gooseberries planted as fillers between young walnut trees from which I picked eleven tons of gooseberries last year. These are four-year-old bushes.
I have three and one-half acres planted one year ago.
Cultivation Methods
During the winter or early spring, at some time when the ground is just right to work fine, I plow the gooseberries with an eight-inch orchard plow, throwing the dirt to the bushes. The small weeds in and around the bushes are nearly all covered up, and there is very little hand work later.
I use one section of a spring tooth harrow to cultivate with, at first going both ways, then use a five shovel cultivator and a clod masher if the ground is cloddy.

four inches above the ground. The little borer works just under the outer bark for a while, then eats through to the center of the bush and goes down the heart into the roots, eating the heart out of them and killing the bush. Your truly,
—J. W. SIMMONS.
Salem, Rt. 2, Jan. 6, 1924.
(The farm of Mr. Simmons is in the Polk county red hills, overlooking Salem. Red hills hereabouts generally mean hills section south of Salem, in Marion county.—Ed.)
