

OWN YOUR HOME

Bungalow of Average Size and Small Cost

PUBLISHED here is a bungalow that is small, yet roomy and cozy. The whole house is planned with an idea of lessening the labor of the housewife. Yet in doing this none of the features that make a home attractive are lost.

An entrance into the living room by two French doors is an unusual and unique plan although it is suitable for summer and warm climates. The fireplace at the end of the living room is a feature no coast home should be without. The dining room is not definite as it is only separated by a large arch.

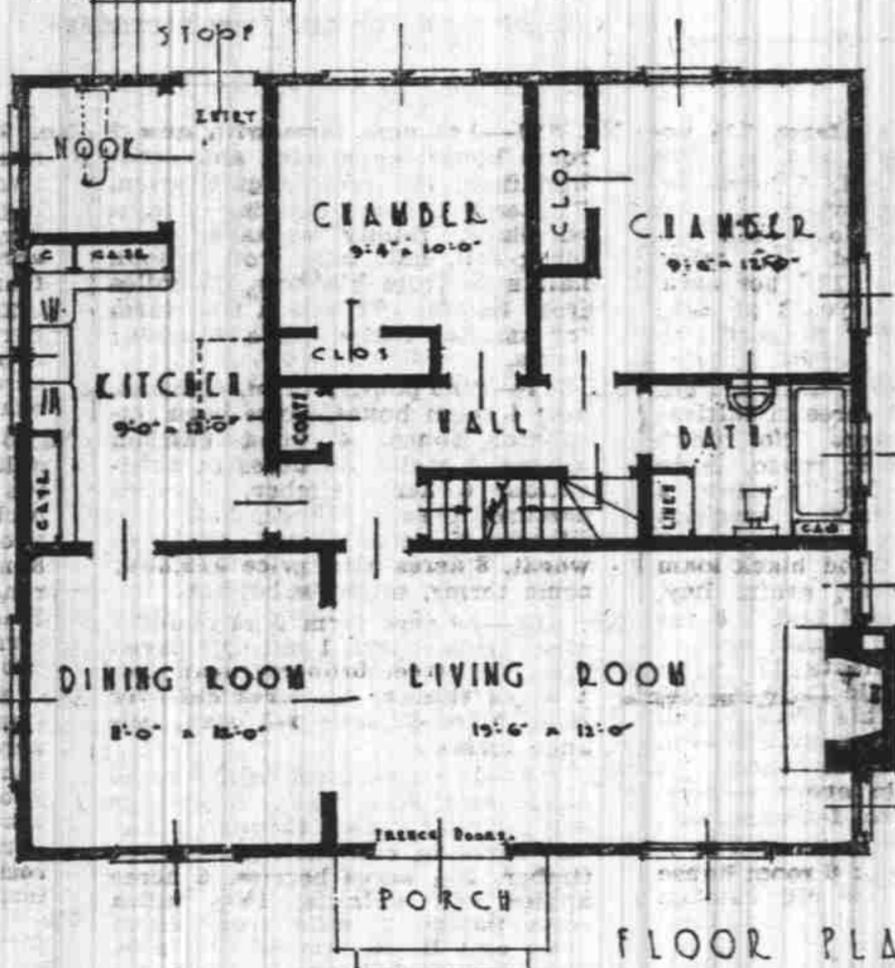

The kitchen has the usual cupboards and sink located under two large windows that give an extraordinary amount of light. There is also a cooler, a very desirable feature. The nook is adjoining the kitchen and has a built-in ironing board.

The small hall which leads from the living room and kitchen has a coat closet and opens on the two bedrooms, the bath, and stairs both up and down.

The bedrooms are both large, light and well ventilated. They also have large closets, an arrangement that small houses do not often have.

The bathroom is larger than the ordinary and a built-in tub can be used. This room also has room enough for a spacious linen case and medicine chest.

The basement is reached by

the stairs from the hall and has a full cement floor.

With a small expenditure for work and shrubs the exterior of

this house could be enhanced very much. It is a type suitable for any family and can be built in a variety of finishes.

Plans for this home may be obtained at

New Building Secured for Boys' and Girls' Exhibits

Boys and girls exhibiting the industrial club work at the state fair will be established in a new club building which is to be erected at the state fairgrounds before next fall at a cost of \$30,000. This is the result of the bill of items included in the state fair appropriations passed by the legislature and approved by the governor. Of the total amount appropriated, \$20,000 goes for premiums and \$25,000 for a drainage system for the fairgrounds.

Making a Campaign Against the Squirrels

Throughout Polk county ranchers and the farmers organizations have declared war on the gray digger squirrel a county-wide campaign under the direction of Wm. L. Teutsch, of the O.A.C. extension service, cooperating with the Polk county court and the biological survey, is being conducted.

Brush College community, just across the river from Salem, got solidly behind this move at its regular grange meeting last Friday night.

A squirrel poisoning campaign was appointed consisting of O. Whitney, W. F. McCall and V. J. Layman. March 9 to 14 was fixed as a squirrel poisoning week

and every individual owning land in the Brush College community is urged to treat their land with poisoned barley during this week. A supply of poison is available at the O. Whitney, W. F. McCall, and Fred Ewing farms.

The importance of poisoning the gray diggers early in the season has been emphasized by many ranchers throughout Polk county. They point out that the average gray digger litter is 8 and one squirrel killed now might account for eight which would come out later in the season.

Accurate data on the destruction to crops which a gray digger does during the season has been checked. It was found that during a four months period between planting and harvesting a crop of wheat that these diggers destroyed 44 pounds of this grain. The gray digger works from early March or late February until late October and the total seasonal destruction of this pest is thought to be much greater than this.

With the comparative high cost of seed grains this season, it is constantly brought out, that this season particularly, it will pay to spend a few cents on squirrel poison.

The poison barley supplied is mixed according to a formula worked out by the U. S. biological survey and has given best and most economical results of any poison yet developed.

Polk county communities which have held squirrel poisoning campaign meetings so far are, Oak Grove, Elkins, Brush College, Willamina. Next week meetings will be held in the Liberty Bell, Buena Vista, Bridgeport and Zena communities.

Correct this sentence: "John has fifty thousand of insurance," said she, "but I never think about it."

Three "Noes" of a woman equal one "yes."

Just a Minute Father!

You have been spending a lot for fuel lately, and not getting much warmth either, haven't you?

Let us show you how a concrete tile home will keep your family warmer in winter and cooler in summer. Incidentally you pay for this kind of a home only once. Much easier on the pocketbook.

NORTHWEST'S BEST FOOT IS ADVANCED

Commercial and Industrial Exposition to Be Held in City of New York

Oregon will be one of four states of the west to cooperate in a great industrial, commercial and agricultural exposition in New York city early in the spring of 1925, when the mammoth Grand Central Palace will be used to house fitting displays from Oregon, Idaho, Montana and Washington. The project will be known as the Pacific Northwest Commercial and Industrial exposition.

Already the governors of Washington, Oregon, Idaho and Montana with the state legislatures of Montana and Washington have endorsed the proposed plan. In the big list of exposition supporters now being formed are western senators and congressmen, Herbert Hoover, secretary of commerce, and many prominent business men identified with the progress of the west through their active support of commercial and civic bodies in the cities of the four states now banded together in the exposition enterprise.

Oregon was one of the first states to take an active interest in the exposition and in his endorsement of the enterprise Hon. Walter M. Pierce, governor of Oregon, said:

"I am glad to know there is a plan for extending the market for the products of the Pacific coast states. An exposition of our products in New York city will certainly be a wonderful method of conveying to the world information concerning our marvelous west. Such an exposition, conducted along broad and comprehensive lines, will advertise as nothing has in recent years. The wealth and population of the Pacific northwest will quickly double when the east realizes the extent of our wonderful natural resources."

Hon. C. C. Moore, governor of Idaho, one of the strong supporters of the exposition, says:

"Our efforts in the past to make a proper presentation of our farms and industries to the people of the extreme east have met with great disappointment. In my work of bringing prospective home-makers from the east to Idaho I have found a lack of appreciation of the undeveloped resources of the great northwest and a lack of knowledge of our varied industries. I approve heartily of the plan of making a display of Pacific coast products at the Grand Central Palace in New York next April or May."

Speaking for Washington, Hon. Roland H. Hartley, governor of the state, says that the west's natural resources and industries need new capital and men of energy for their development, and any effort toward this end should have the hearty support of all citizens of the Pacific northwest.

In his endorsement of the exposition project Hon. J. E. Erickson, governor of Montana, says:

"I think the plan is an excellent one. The majority of the people living in the far east have little or no conception of what we have in the west. I assure you that I am heartily in accord with it."

The exposition has also been strongly endorsed by the Associated Industries of Oregon, and a resolution recently adopted in part says:

"Whereas such exhibition has for its primary purpose the introduction into the eastern markets of the manufactured articles and other products of the Pacific north west, and to invite the consideration of investors, manufacturers and tourists to the diversified resources of the northwest section, we heartily endorse the project and will do all we can to air and encourage the successful consummation of the enterprise."

E. C. Sammons of Portland, vice president of the United States National bank and official representative of the Portland Chamber of Commerce in the task of forming the permanent exposition organization, is a member of the nomination committee for Oregon. Already many prominent men are identified with the project, including O. M. Lanstrum of Helena, vice president for Montana. Directors from Montana include H. R. Cunningham, of the Montana Life Insurance company, and D. J. Charles, president of the Miners Savings Bank & Trust company of Montana; George G. Black, president of the Black Manufacturing company of Seattle, is a member of the nominating committee, and members of the board

of directors for the exposition from Seattle include Joseph Swallow, chairman of the board of the Dexter Horton National bank.

George S. Long, vice president of the Veryhauser Timber company, is a member of the board of directors from Tacoma and E. M. Hayden, of the firm of Hayden, Langhorne and Metzger, of Tacoma, is counsel for the exposition.

The exposition will be held in New York next April or May, dates to be announced later. Within a very short time a meeting will be called to form a permanent organization, when officers will be elected with directors and vice president for each state selected and their duties outlined. Spring is the ideal time for an exposition in New York, coming at a time when investors and manufacturers are planning their summer vacations when business trips may be combined with pleasure trips and the west, with its many opportunities in all lines, will offer special inducements as a result of the vast display in the nation's metropolis.

Business contacts from expositions of this character, it has been found by experience, will mean untold benefits in the immediate future.

Cooperating in the state of Oregon as well as in Idaho, Washington and Montana to make the exposition one of the most successful ever held will be the governments of the four commonwealths, the leading cities of each state, state and local chambers of commerce, civic and trade organizations in general, commercial and industrial companies and corporations, trade associations, agricultural groups, industrial bureaus, ports, mines, timber, land and power companies, irrigation projects, railway and steamship lines.

With such great national playgrounds as Crater Lake, Glacier and Arlier National Parks located in the northwest, space will be assigned to these and other attractive scenic features. Plans are rapidly being formulated and before many weeks go by actual work will be inaugurated.

Italians Regain Control Of Italian Textile Mills

MILAN, Italy, Mar. 7.—Germany, which exercised a decisive economic influence in northern Italy before the war, is rapidly regaining its ground in at least the textile industry. It is understood that the numerous spinning mills in the neighborhood of Milan are again mostly in the hands of German capital, and that a system of cheap Italian and skilled German labor on the product has been worked out by which cotton and

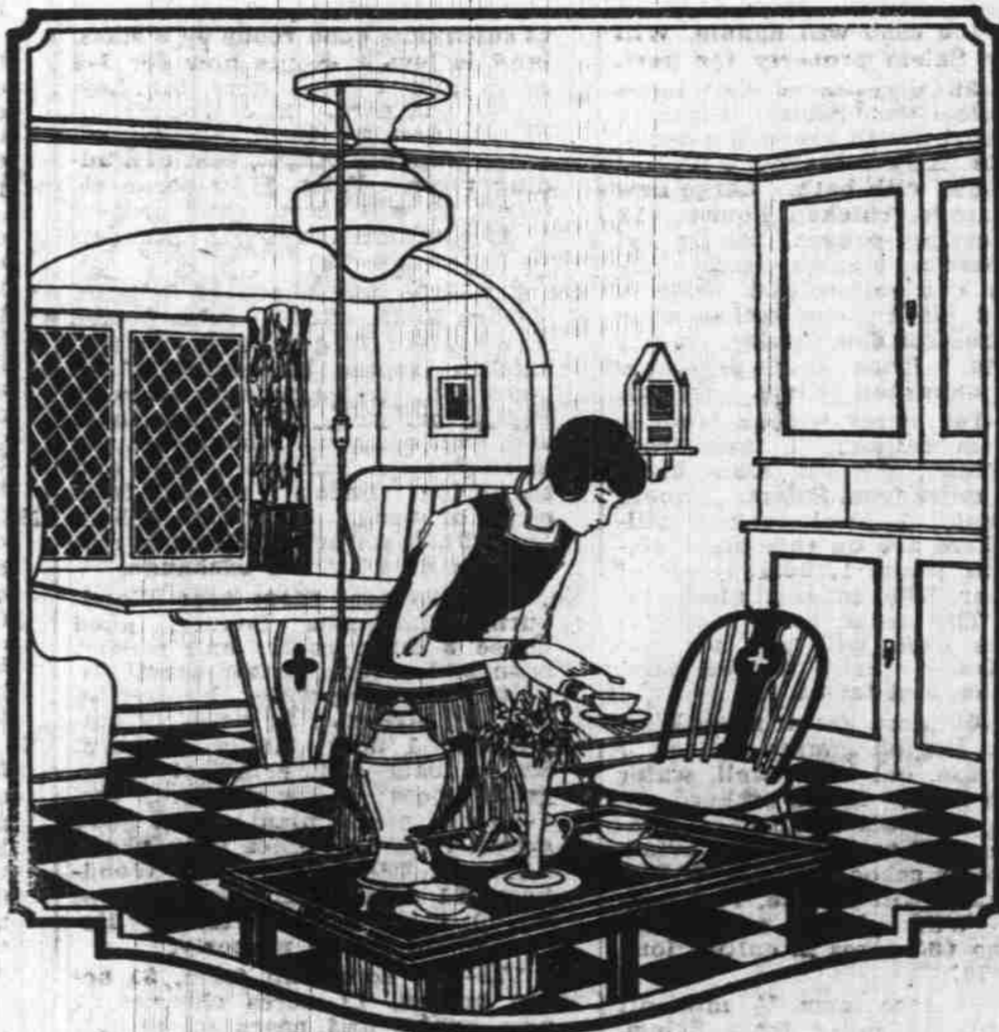

imitation silk goods yield handsome profits.

The firms about Milan import their cotton from America and the yarn is spun by cheap Italian labor. The partly-finished product is then sent to the textile concerns of middle Germany, chiefly in the neighborhood of Chemnitz, where certain processes requiring skilled labor, such as dyeing, are applied. Then the almost-finished product wanders back once more to Italy, from where it is sold. The combination of cheap Italian and skilled German labor enables the manufacturers to set up prices that can compete successfully with those of other countries.

A large part of the product goes to Yugoslavia. The fact that the export country is Italy is an especially favorable circumstance for the German owners, since Italy has a treaty with Yugoslavia by which her textiles enjoy advantages which are not extended to Germany.

RADIO TEACHES BRAZIL ENGLISH LANGUAGE

RIO DE JANEIRO, Mar. 7.—The newest international angle in Brazilian radio is the study of English. Half hour lessons are given twice a week and are very popular. It is estimated the students number 10,000.

The improved Daylight Kitchen Unit on free trial for seven days,

Let us drive Kitchen Gloom away for you

Instead of a gloomy kitchen—full of shadows and darkness—you'll have a beautifully lighted kitchen—where the illumination is softly diffused and evenly distributed. There will be no shadows.

This Daylight Kitchen Unit is installed in many thousands of the most modern homes throughout the country. It is the best unit obtainable for its purpose.

THE CONVENIENCE OUTLET permits your iron, toaster, percolator, vacuum—or other electrical appliance—to be connected at convenient height—and used with the light on or off.

FREE—For a limited time we will install these units for a 7-day trial without cost to you.

85¢ a month for ten months is all you have to pay for this DAYLIGHT KITCHEN UNIT.

Telephone or drop as a card—our representative will call and show you the unit. Order yours NOW!
