

Agitators Peril Foreigners in China

Additional allied troops are being landed in Shanghai as a result of the distinct anti-foreigner tone the latest uprising there has taken. One American is listed as a victim of riots begun by Chinese student agitators, who want to oust all foreign residents from their country.

Some of these agitators are seen talking revolt to passers-by in one of the main streets of Shanghai.

EXPERT GIVES RULES OF SELF PROTECTION IN THUNDER STORMS

MILTON, Mass.—About this season, as the old almanacs used to say, expect thunder storms. Inevitably they bring danger to human life but the hazard can be diminished considerably if the advice of men who have made a thorough study of the electrical discharges of the atmosphere is followed.

One of these experts is Alexander G. MacAdie, director of the Blue Hill observatory and professor of meteorology at Harvard university. In the little building on the wind swept summit of Blue Hill, the highest point in eastern Massachusetts and in the midst of the Blue Hill forest reservation, he has spent many years in watching and analyzing the action of the elements. He has made a special study of thunder storms and some time ago he formulated a set of suggestions to help people take care of themselves during such disturbances. Since that time, he says, experience has borne out the value of these suggestions and science has not developed any new means of safeguarding a person against lightning discharges.

Get under cover, is his first rule. If you can't do that, lie down. About ten lightning flashes in a hundred come down to earth in a straight line and the person who stands out in the open when such flashes are seen invites trouble. But getting under cover doesn't mean seeking shelter beneath a tree because that will bring you in the direct line of discharge and Professor MacAdie says more people are killed by lightning in this way than probably any other.

The doorway of a barn or a window near a chimney also are dangerous places to stand, because lightning follows to some extent any draft of air, especially warm air. When the flashes are heavy or numerous keep away from chimneys, trees, flagpoles or metal clotheslines, and cut out your radio.

You are safer indoors than out. The probability of a person in an ordinary residence building being struck, says Professor MacAdie, is very slight, and dwelling houses in city blocks are virtually safe. He defends the lightning rod, once so popular but now largely fallen into disuse, asserting that if a house is provided with good lightning rods there is little to fear.

Going to bed doesn't do any particular good, but standing on glass, rubber, a woolen blanket or any other good insulator will give a person a little more security. The observatory director advises passengers in a trolley car to sit still if lightning comes in and burns the fuses because with the roar and blinding flash the danger is over.

He urges that every effort be made to resuscitate a person struck by lightning. It seldom

kills outright, usually stunning the victim in such a way that artificial respiration will restore him to consciousness.

For the protection of livestock, which often are killed by lightning while at pasture, he warns against tying them near a wire fence.

Manchester, England—Dr. L. L. S. Palmer, chief of the applied physics department of the College of Technology, Manchester, and Philosophical Society recently that in the next war that was accomplished by the British in the Zebrugga raid in 1918, could all be done by wireless.

A soldier in a duxout in England could send out a fleet of boats, said Dr. Palmer, guide the vessels by radio to a certain point make them discharge bombs and bring them back without airplane observation. The course of the ships would have to be plotted upon a map, but with airplane observation a raid could be made against the enemy with great precision. The speaker explained that in controlling a torpedo aimed, for example, at a submarine, the torpedo could be seen all the time, and if it went the wrong way a tap on the key would alter its course and send it in the direction of the target.

HULL, Eng.—Prohibition in the United States has proved to be the handmaiden of thrift, home building, happiness and prosperity and it would go a long way in England toward solving the problem of unemployment, said Gerald France, the president, addressing the National and Commercial Temperance union here at its annual conference.

Mr. France said he rejoiced in the sinking of the vessels "flying the Jolly Roger of the bootlegging fraternity," and he hoped those men who financed this traffic would lose every penny they possessed, rather than that "the fair name of Britain should be dragged into the mud of international treachery."

This warning is now echoed by Captain G. S. Burnham in a book on "Cotton Growing in the British Empire and Exotic Countries."

"There is a world shortage of millions of bales of cotton of the American varieties," the author says. "This shortage and prohibitive prices confront the Lancashire industry, and that of all other countries, with a crisis of which the gravity can only be compared with the cotton famine brought about by the American Civil war."

Captain Burnham attributes the "appalling disaster which has overtaken the cotton growing industry in America" to the ravages of the boll-weevil. "The problem which Lancashire and all countries have speedily to solve is," he says, "where is the American type of cotton, at economic prices, to come from?" and he supplies the answer that it must come principally from the new cotton fields of the British Empire, "but only gradually."

Efficiency Experts Prepare To Feed 8000 Free Masons

LONDON—An office fashioned after a battleship's conning tower is to be used for the direction of a banquet August 8, when 8000 Free-Masons in their regalia will be entertained by the United Grand Lodge of England, with the Duke of Connaught presiding.

It is claimed that this is the greatest number of persons who will have ever been taken care of at one time, at an elaborate function which is to be a banquet in every sense of the word. There are to be seven kitchens, several hundred chefs and assistants, and 1500 girls as waitresses. The working arrangements will be controlled from the conning tower, electrically fitted, and containing means by which instructions may be conveyed to any part of the great hall to keep things running smoothly.

More than 50,000 plates and dishes will be required, 24,000 glasses and 100,000 pieces of cutlery. The largest number ever served in London previously was in 1922, when 7000 persons sat down at a luncheon.

SLAYER IS CONVICTED

SAN FRANCISCO, June 12.—Felix Sloper, who shot and killed a police officer during a holdup here of a branch office of the Mercantile Trust company, April 9, was found guilty of first degree murder by a superior court jury here today. The verdict being returned without recommendation, the penalty probably will be death.
