FALLS CITY NEWS OF THE WEEK

-This cut is used by courtesy of the Associated Industries, of Oregon.

THIS WEEK'S SLOGAN

DID YOU KNOW That the Salem district is growing to be a great swine breeding center; that Salem is now an important pork packing center, and it will grow in this respect constantly; that swine breeding here goes admirably with dairying, and there should be twenty cows where one is milked in this district now, and tens of thousands more hogs on the dairy farms; that every farm of every kind should have a few hogs, at least; that this is a good hog country-some good judges say it is the best hog country in the world; and that there is room for thousands of men who know the best methods of swine breeding and other thousands who are will-ing to learn? And did you know that this is the best hog market in the United States?

west market centers at very close tunity for pasturage or where from

around \$14 per hundred pounds. two or three or more cows are This is apparently a tremendous kept will find it to be of advantprice when we look back and see age to keep at least one brood the farmers who formerly did well sow, and from that up the numand paid off the mortgage by rais- ber should be increased as coudiing hogs and selling for around tions on that particular farm perfive or six cents per pound. Of mit. I believe that the number course the ready "come back" to of hogs in the Salem district could that is that there is a difference easily be doubled without any in the price of feed, and we will admit that. Feed barley is today quoted in ton lots at retail at approximately \$57 per ton. Of course there are many other varieties of hog feed that can be purchased wise planted.

on the market, but they will not yarv a great deal in proportionate value at the prive when compared with barley at the above mentioned price, so barley is quoted for a base to calculate from. Authorities state that it will re-

quire from four and a half to five pounds of barley to produce a pound of gain on a live hog. So calculated from that standpoint. about the only advantage in having hogs to feed your marketable barley to would be that it furnished a home market at top price for your barley. If one is raising all of his own feed and assuming that an acre of ground would produce approximately the same tonnage of feed that it would before war times when hogs were selling at perhaps five cents a pound the difference would be that instead of a former \$5 income the income today would be \$14. But to return to the advantage of raising hogs. As stated before, there is not a great deal of margin if the hog was fed only on high priced commercial feeds. But here is where the advantage comes in from the farmer's standpoint. Immense quantities of many other feeds can be grown that are much cheaper in cost but have no ready cash walue unless placed on the market in some finished product such as the hog. This refers to pasturages, the waste from the fruit orchards, the skim milk from the dairy, gleanings from the stubble fields, etc.

It certainly is an advantage it this can all be cashed in on a basis with a high priced ready marketable feed, and it can be done by the use of hogs. There are those who put out a series of crops that are grown quite cheaply and get their hogs ready for market with but the use of very little feed that

has the full cash market value. It is not the purpose of this article to especially comment on thedifferent feeds, but it was formerly believed that alfalfa could only

The Number of Hogs It is my opinion that the num-ber of hogs grown on any one farm look respectable again. Mrs. Edd than the Portland price for our the forther of a cent a pound better the num-ber of hogs grown on any one farm look respectable again. Mrs. Edd than the Portland price for our the forther of a cent a pound better the num-ber of hogs grown on any one farm look respectable again. Mrs. Edd than the Portland price for our the forther of a cent a pound better the num-ber of hogs grown on any one farm look respectable again. age of about three litters every should be limited only by the Smith. swine breeders, as the Slogan man ber 1 or thereabouts will require (Continued on page 101-(Continued on page 10) tion of his duties as night relief (Continued on page 10)

special burden in preparing feed. This number could be mater ally increased if special attention was given to sowing special crops to be used in pasturage and other-The question of marketing has passed the point where it needs er ous consideration. There is not a point in the Willamette valey where a ready cash market can tot be reached inside of a very few miles at a price corresponding

very closely to the top market price for the mid-west centers. Here in Salem all that is necesary is to bring in a well finished log and get the cash any business lay of the year. The very worst that could be ex-

sected would be to about trade tollars if all high priced feeds were used. On the other hand. he hog offers an opportunity to convert a lot of cheap food into a tigh priced product. -E. A. RHOTEN.

Salem, Oregon. July 7, 1925.

(Mr. Rhoten is live stock editor of the Pacific Homestead, the leading farm paper of this section, published from the Statesman building .- Ed.)

Oregon shipped 442,278 pounds of cheese to San Francisco and 494,346 pounds to Los Angeles during the month of June just closed, according to figures issued by the United States department of agriculture. Shipments of other commodities to those two cities from this state during the same month were reported as follows:

To San Francisco-Butter, 236,-689 pounds; eggs, 3,915 cases;
