

One drop of water does not make a waterfall-- One man's effort will not build a community

PATRONIZING of YOUR COMMUNITY STORES AND INDUSTRIES MAKES PAYROLLS

How great this community may grow, how prosperous and complete it may become, depends upon us--our willingness and our desire to work together-- ONE for ALL and ALL for ONE

BEST EQUIPPED HOP YARD IN THE WORLD IS BEING BETTER EQUIPPED

Has Six Apartment Houses, Including Two New Ones Now Being Built, Capable of Accommodating 1200 People--In Picking Time This Makes a Very Busy Little City in Appearance, and Provides the Comforts of a City.

There are many very well equipped hop yards in the Lake Brook district. The industry here, as represented by the leading growers, is on a more permanent basis than elsewhere in the entire world. The yards are laid out and equipped with an idea of supplying a needed staple for all time.

T. A. LIVESLEY Mayor-elect of Salem; owner of the best equipped hop yard in the world, on the Lake Brook ranch here; moving spirit of the largest hop yard in the world, being put out near Chilli-wack, B. C.

of T. A. Livesley & Co., on their Lake Brook farm, seven miles below Salem. The farm contains 610 acres, of which 390 acres are occupied by the hop yard.

There is an apartment house on this farm with 63 rooms and another one built in 1924 with 38 rooms. There are four more such apartment houses; six in all, and capable of accommodating a total of 1200 people.

Two of the apartment houses are new this year. The old tents are all torn down, or to be torn down.

T. A. Livesley & Co. developed a big hop yard four miles south of Salem, on the Riverside paved highway. There are 290 acres in hops here, and patent steam dryers are used; steam heat, drying the hops in seven hours, against 18 to 24 hours under the old system.

The Livesley people have been growing in their own yards about

EVERLASTING FACTS ON USES OF LIME

requirement crops-- Personally, I have not much faith in the blue litmus paper test, but have had very satisfactory experiences with the Troog test.

Their maximum production awaits only the application of scientific methods and the supplying of missing or depleted elements for crop production.

June 14, 1926, Salem, Oregon. (Every word of the above is of supreme importance to all the farmers of the Willamette valley and coast counties of Oregon, and to most of those of southern Oregon; to say nothing of all the rest of our people--for this matter affects them all, because without soil bacteria there can be no plant life and without plant life there can be no other life on the earth; and without conditions for the thriving of soil bacteria there can be no great prosperity either on the land or in towns and cities. Hence the absolute necessity of agricultural lime on our soils that become acid with cropping, or are already acid, preventing the thriving of the soil bacteria.)

MORE HOPS WILL BE PRODUCED THIS YEAR

own labor, he can shade that cost, of course.

There has been during the past year a reduction on freight on hops sent to the Atlantic seaboard, from \$2.50 to \$1.75 a 100 pounds--on hops for export only. The ocean freight is \$1.65 per 100 pounds. This is some help. It gives our grower the advantage of nearly a half a cent a pound on his hops that are exported.

The average yield of hops, especially in the upland districts, is around 1000 to 1200 pounds an acre. Some districts do well with 1000 pounds--growers think they do well with that yield. But Durbin & Cornoyer got last year nearly a ton to the acre on their Mito-ma ranch, over a ton on their Curtis yard, and about a ton on the Howell Prairie ranch. It should be explained that the latter ranch was heavily fertilized; very heavily. And lime had been supplied.

Why do the holders of the 1200 bales in the hands of growers not sell now? They have been offered 30 cents a pound. Some would sell now at that price, for the market has slowed down. But they may get that high an offer again, with hot weather in the east. It has been mostly cool there. It is a gamble. The growers who are holding their hops are gambling.

Our Yield Oregon produced last year 65,000 bales of cluster hops, 200 pound bales, and about 10,000 bales of the fuggles or early hops. There will be more clusters this year. The crop looks fine. Practically no lice; no honey dew; red spider only on very poor lands. The acreage has slightly increased since last year. The yield per acre will be higher.

For the fuggles, the yield will be lower. The early spring warm weather forced them. They are blooming too early. They haven't their arms out. This is a condition never seen here before.

He is also the moving spirit in the organization of the Canadian Hop Growers, Ltd., developing a 600-acre hop ranch near Chilli-wack, B. C. This will be the largest hop yard in the world. H. W. Ord, formerly with the Home yard near Independence, in the Salem district, has charge of the British Columbia operations. The Home yard, with 550 acres, is at the present time the largest hop yard in the world.

the soil the decaying organic matter, early referred to in this article. Hence the impoverishment of the soil and the poverty of the son.

In European nations, where all these phases of soil fertility have been wisely adhered to--after 2000 years of cropping, the soils are producing larger crops than ever.

Undoubtedly, the soils of western Oregon, when properly handled, are the peer of any agricultural lands in the United States.

WE HAVE ABOUT 15,000 ACRES IN HOPS, INCLUDING OUR NEW YARDS

Corrected List to Date Shows 14,020 Acres in Bearing This Year, 1467 Being of the Fuggles Variety and 12,553 of the Cluster Variety--Oregon is the Leading Hop State and Salem is the Largest Hop Market From First Hands in the World.

Salem has in the past year been increasing her lead as the greatest primary hop buying center of the world; as the largest buyer from first hands. Salem is the center of the Oregon hop industry. The Oregon hops are nearly all raised in what the Slogan editor is pleased to call the Salem district--in the trading district tributary to Salem.

The list of Oregon hop growers, with their addresses, that appears at the conclusion of this article, shows a total of 12,553 acres of hops of the late or cluster variety, and 1467 acres of the fuggles or early variety; a total of 14,020 acres, and there is enough acreage of new hops, coming into bearing this year and next, to make up about 15,000 acres in all; perhaps a few more acres, including the acreage of several growers that could not be determined, and which in the list are designated with a ? mark.

The Oregon acreage in hops has been growing slowly the past two years. Up to that time, it had receded for several years. It was down to between 10,000 and 11,000 acres in 1922 and 1923. It was estimated at 13,000 acres last year.

Our Oregon Growers Following is a list of the hop growers of Oregon, with their addresses. The figures after the names represent the number of acres of each grower.
