

Last Year's Average of One New Home a Day to be Surpassed in 1926

Ventilation Will Be Feature of New Home Plan
Plan No. 440

While primarily designed as a permanent home for a small family the house plan of today, designed by Harry Boland of the Universal Plan Service, could well be used for the construction of a beach or mountain resort home.

The plans provide for four rooms, the feature of which is the large living room, 13 feet 6 inches by 16 feet, with a fireplace in the center of the outer wall. This room and the kitchen occupies the front of the house, while to the rear are the sleeping quarters and bathroom.

A feature of the house plan is that all of the major rooms have double exposure so necessary to adequate ventilation.

The plan provides for an exterior finish in shingles, though for permanent construction, effective results could be obtained by the use of brick. The brick stoop with the small portico above adds materially to the appearance of the front of the house, which is gabled.

FURNITURE MEN TAKE NEW HOME

Chambers and Chambers Moves Into Recently Finished Building

The Chambers & Chambers Furniture Company is rapidly moving all its equipment into its new building just completed on North High street. The last touches of construction were put on last week.

About the only work left uncompleted is the marquee along the front of the building, which will be put in as soon as it is completed at the factory. Supports and forms for it are already in place.

The Capital Business college, which will occupy the top floor of the new building, is not expected to move in until about September 1. The plant it will occupy here is considered one of the most efficient and modern business college plants in this district.

Composer of "Dixie" Liked Possum Meat

MT. VERNON, O.—(AP)—There are persons here who remember the last days of Daniel Emmett, the famous composer of "Dixie," who is buried in Mountview cemetery, near Mt. Vernon.

Emmett was eighty-nine years old when he died. He was born here in 1815 and died in his cabin, not far from his birthplace. "I spent many an hour in Emmett's cabin," said J. W. McConkie. "How he could sing, and play the violin. He would sing by the hour, in his old age, if a fat, sleek possum were promised him at the end. He was passionately fond of the meat of that animal."

Emmett received inspiration for the swinging lilt of Dixie while watching a group of negroes load cotton on the wharf at Memphis, according to McConkie.

"They were humming," said McConkie, "just keeping time as they juggled the bales, and something in their attitude and song gave Emmett the inspiration for his immortal tune."

Sees Better East-West Relations in Students

CHICAGO.—"Burden of the world's peace rests on the youth of the nations—the students."

Coinciding with the expression of this thought by Harry F. Ward, secretary of the Methodist Federation for Social Service, on his return from a year in the Orient, it has been announced that the Student Conference held at Evanston last Christmas will have two outgrowths this year in an American student gathering at the University of Illinois, September 4 to 9, and a meeting of foreign and American students in New York, September 19 to 17.

Added significance to the Student movement in America, which has a counterpart in the Youth movement in Europe and the Student movement in the Orient, was given by Mr. Ward's appraisal of world possibilities.

"After a year of work with the students of the Orient," he said, "I come back with the conviction that the gravest menace to the future peaceful and cooperative development of mankind is the growing tension between the peoples of the East and those of the West. Unless this can be checked it will lead mankind, in a generation or two, into a worse catastrophe than the late European war."

Sun Necessary for Long Range Weather Prophecy

WASHINGTON, D. C.—If you can keep strictly scientific tab on the temperature and radiation of the sun, long range weather forecasting is simple.

But there are few places in this world suited even to the placing of super-sensitive instruments which record the sun's temperature and temperament. Dr. Charles G. Abbot of the National Geographic Society-Smithsonian Institution solar radiation expedition has returned from a trip of 80,000 miles in an effort to find the likeliest spot for observing the sun.

His investigations took him to the edge of the Sahara desert in Algeria, to the sandy wastes stretching back from the Nile, to the Sinai peninsula, where Moses received the Commandments from God, to the wild warrior tribes of the hills of Baluchistan, and at last to the land of the Hottentots of southwest Africa.

There, on an isolated, precipitous peak, he found his goal, and there caves are now being fitted out to receive two American observers and their delicate instruments for measuring the sun's radiation. One more essential step in the attempt to make possible weather forecasting weeks and even months ahead has thus been taken.

For long range weather forecasting is the ultimate probable result of the Smithsonian studies of the sun, of which Dr. Abbot's expedition for the National Geographic Expedition is a part. To explain the expedition's place in these studies will require an understanding of their present status.

For more than 80 years the Smithsonian has been measuring the sun's light and heat. By 1903 the institution's scientists varied from day to day and from year to year. They tested this conclusion by measurements at stations ranging from sea level to Mount California to the Deserts of Sahara and Chili, over many years of study before they allowed themselves fully to believe it. By 1925 conclusive proof had been developed that this variation influenced the earth's weather. The manner in which this influence is brought to bear, however, is very complex and has not yet been fully unraveled.

But it seems demonstrated that a variation as small as one-half of one per cent is sufficient to produce really noticeable changes in weather. For this reason it is vital that the measurements of solar radiation be accurate to the highest degree. To increase this accuracy is the main reason for the establishment of a new station in the Eastern Hemisphere. Daily measurements from this station will check those made at the two stations in California and Chili, which the Smithsonian already has.

The ideal spot for measuring solar radiation would be at the top of the earth's atmosphere. In choosing a site for the new station, therefore, Dr. Abbot had to seek a spot whose conditions approximated as nearly as possible those at the top of the earth's atmosphere. First, the air had to be as pure as possible, free from dust and smoke it had to be dry, cause even a small amount of water vapor absorbs great quantities of solar radiation it had to be rare, which condition could only be satisfied by choosing a high altitude; it had to be uniform and unchanging.

The search for a site approximating this ideal was long and difficult but Dr. Abbot finally found a peak in the Hottentot country of South Africa which satisfied him. And there the new station is to be established, fitted with the super-sensitive instruments, some of them designed by Dr. Abbot, which record temperatures to the millionth of a degree. Two American scientists, happy to serve even in this world's-end place, are already on their way.

And the result? Farmers, shippers, builders—all whose work contains the weather element—will be able to know what to expect with reasonable certainty.

Municipal Observatory Part of School System

OAKLAND, Cal.—One of the most important municipal enterprises in Oakland is astronomy. In altitude at least, the city owned observatory has been put above everything else for it stands on a high hill just outside the paving.

Anthony Chabot founded it in 1884 with the gift of an instrument—then considered large—and a sizeable financial donation. The observatory has the reputation revolving dome, and now possesses a twenty-inch telescope and much other valuable equipment.

As a part of the public school system it serves as a class room not only for school children but also for thousands of grown-ups—members of clubs and others of the general public who are becoming as familiar with the Milky Way as are residents of some cities with the landscapes in their own townships.

Doyle and Nordon Hold Strong Places With Boys

LONDON.—(AP)—Sir Arthur Conan Doyle has a strong place in the affections of English boys. His "White Company," "Sherlock Holmes" and "Brigadier Gerard" are prime favorites with a majority of 12,000 English boys between fourteen and eighteen to whom the YMCA sent questionnaires. The boys also liked Jack London's "White Fang," and "Pookick Papers" and "Tom Brown's Schooldays."

Much discussed modern sex novels received few votes in the replies. British boys apparently incline to adventure, detective and sport stories in their preferences. In reply to queries as to what stories affected them most before they were fourteen, "Treasure Island," "Robinson Crusoe," "Kidnapped," "Swiss Family Robinson," "Kenilworth," "Westward Ho" and "Pizarro's Progress" were most frequently mentioned.

Mike O'Dowd Nominated as County Commissioner

ST. PAUL, (AP)—Mike O'Dowd, popular St. Paul citizen who held the world's middleweight championship from 1917 to 1920, has just been rewarded by his admirers with the nomination for county commissioner of Ramsey county.

O'Dowd, who as world's champion enlisted in the service and served overseas, won the title from Al McCoy in 1917 and lost it three years later to Johnny Wilson. He retired from the ring about three years ago.

If O'Dowd is chosen for office in the final election, his annual salary will be but a small part of what he received for many of his ring engagements.

Retire and Grow Young, Sir Oliver Lodge Says

LONDON.—Sir Oliver Lodge laughs at the theory that retirement is fatal to busy men. At 75 he says he is feeling younger than he did for years before he gave up regular work.

"Everyone should retire in good time, for it is an absolute tonic," declared Sir Oliver. "Don't wait till you wear out, in my advice. Retire while you are in good form so you can do all things you desire. I am feeling a lot better than I did when I was still in harness."

But Sir Oliver is not retired in the way many men think of retirement. He is busy most of the time with experiments of various sorts, and only three months ago announced the discovery of a new sort of wireless set in which neutralization is abolished.

Chinese Women Finding Freedom in Industries

SHANGHAI.—(AP)—The lot of Chinese women is improving. They are emancipating themselves from the thousands of years of customs which relegated them to household drudgery. If their husbands were wealthy, and to animal-like drudgery in the fields it wedded to poor men.

Recent surveys of economic conditions show that many banks and other commercial concerns are employing women of the middle and higher classes, and that many are becoming members of learned professions. Many Shanghai banks employ Chinese girls as student clerks, training them for positions as stenographers and secretaries.

Young women clerks, to the astonishment of those who know China a decade ago, are commonly used in commercial houses of numerous cities. Women are adding greatly to the wealth of the country.

Soap and Water Give Chicago Stores Wash

CHICAGO.—Chicago which once ranked not far below Pittsburgh in its reputed ability to produce smoke and dirt and which still manages to collect a fair amount of grime, nevertheless has some of the world's whitest and cleanest buildings.

This is not a paradox, but a tribute to the cleaning qualities of an ancient product polished over for modern skyscraper construction—terra cotta. Smooth and glossy, it yields readily to a little soap and water when owners give the buildings their annual or semi-annual bath.

Many of the huge department stores along State street are surfaced in white terra cotta and after the spring cleaning they present a flashing appearance among their duller brick and stone neighbors.

Among the new buildings built of terra cotta are the "Wrigley twin towers" which contain their dazzling whiteness even through the night under a battery of powerful floodlights.

A train running 40 miles an hour requires a quarter of a mile to stop. An automobile running 25 miles an hour may be stopped in 50 feet. Remember this at grade crossings. 9741

PAPER MILL JOB NEARLY FINISHED

Plastering of Office Rooms Main Part of Work Still Incomplete

Construction of office rooms at the east end of the new paper mill annex is the main work yet unfinished there. Plastering of the office remains to be done, and work on it will start Monday or Tuesday, it was announced. The new office apartments con-

tains two rooms situated one floor level above Commercial street and occupying a space 136 by 32 feet in area, extending across the entire front of the building. A stairway at the southeast corner leads to the rooms. Carpenters are now at work building this stairway.

Two-thirds of the large amount of window glass used on the building is in place. The installing of this glass is expected to last about 10 days or two weeks more.

Forms have been taken from the last cement laid, on an elevator shaft at the rear of the building, and the elevator will be installed soon.

Laying of the patent tar roofing material was halted by the recent rainy weather, but it can be finished in about one day of sunny

weather, according to a statement Friday. White oil paint is being sprayed on the under side of the roof and three "monitors" which run east and west the whole length of the roof.

A cement lining will be laid on the machinery pits built into the concrete floor in the rear future. As soon as the machinery has been installed in these pits, the same lining will be laid on the rest of the floor.

Some of the machinery is already on the ground and will be installed as soon as the construction details have been finished. Electrical fixtures are not in yet. Connections will be installed for lighting and for electrical starting and stopping of the machinery.
