

Last Year's Average of One New Home a Day to be Surpassed in 1926

Here's Good Architecture With Moderate Cost

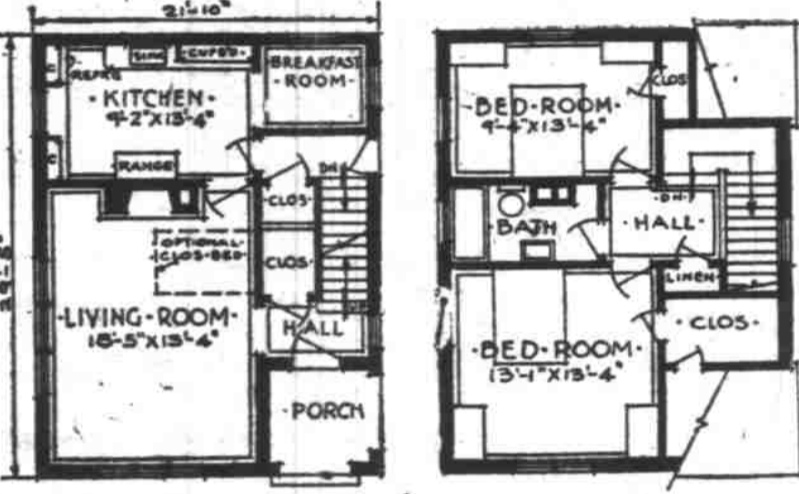

THE SECAUCUS, DESIGN 4A31

RARELY has there been offered a more appealing home for a small family, designed as well for a narrow lot and to come within the means of the man of moderate income, than this one. It is in no sense, especially in exterior appearance, ordinary. It has a very distinct appeal and far more than the ordinary merit in every essential respect. Not the least of this, being built of common brick, is its assurance of durability and fire safety.

Equip this little home with a slate roof and it will not only last a century but will require the absolute minimum of outlay for upkeep. The only exposed woodwork is around the windows and doors and about the eaves, all of it being well protected.

The Common Brick Manufacturers' Association, Cleveland, Ohio, can furnish complete drawings for this design. Leaflet on brick construction sent upon request.

The painting bills on this home will never become burdensome. There is nothing else that will call for repair expenditure for years and years to come.

The floor plans as shown here are the reverse of what they will be in the house, which will be built as pictured. And for the small family the layout is ideal. Entrance is into a small hallway from which the stairway leads to the second floor. It opens directly into the living room and beside the stairway is a closet which may be utilized as a cloakroom or for an in-a-door bed to open into the living room. All of the rooms are of good size, on both floors, and in arrangement could hardly be improved upon. It is an unusually attractive design.

HOUSES BUILT OF PERMANENT MATERIALS COST BUT LITTLE MORE THAN THOSE CONSTRUCTED OF MORE TEMPORARY MATERIALS

But the Upkeep Expense of Such Houses Is Small

See us for—common brick, face brick, building tile, partition tile, sile tile, sewer pipe, drain tile, vitrified sewer pipe.

(Continued from page 1.)

involves play among more than twenty nations.

After a year's lapse, the United States again defeated the British Isles team in 1902, but from that point on America's chief European rival entered upon a period of triumph which was extended through four successive years by the famous Doherty brothers. During that stretch the United States was the challenging team three times and Belgium once.

1907 Australasia took over the cup with another great pair of players, Norman E. Brookes and Anthony F. Wilding. They won the trophy in 1907, 1908, 1909 and 1911, there being no competition in 1910. In the last three of these years the United States was the challenging nation.

Britain broke through again in 1912, and then came America's first victory in eleven years, with Maurice E. McLoughlin, R. Norris Williams and H. H. Hackett recovering world honors for this country. McLoughlin and Williams each defeated C. P. Dixon, but lost to J. C. Parke, while McLoughlin and Hackett saved the day with a doubles victory over Dixon and H. R. Barrett.

Brookes and Wilding regained the cup for Australasia in 1914 and retained it until 1920, there being no play for four years on account of the war.

A recapitulation of the series follows:

Year	Winner	Runner-up	Score	Year	Winner	Runner-up	Score
1900	United States	British Isles	3-2	1912	British Isles	Australasia	3-2
1902	United States	British Isles	3-2	1913	United States	British Isles	3-2
1903	British Isles	United States	4-1	1914	Australasia	United States	3-2
1904	British Isles	Belgium	5-0	1915	British Isles	Australasia	3-2
1905	British Isles	United States	5-0	1920	United States	Australasia	5-0
1906	British Isles	United States	5-0	1921	United States	Japan	5-0
1907	Australasia	British Isles	3-2	1922	United States	Australasia	4-1
1908	Australasia	British Isles	3-2	1923	United States	Australasia	5-0
1909	Australasia	United States	5-0	1924	United States	Australasia	5-0
1910	Australasia	United States	5-0	1925	United States	France	5-0

Wyoming Warden Treats Prisoners to Heart Talk

RAWLINS, Wyo., (AP)—A former "two-gun" Western sheriff, as warden of the Wyoming penitentiary here, is turning criminals back into the "straight and narrow path" by man-to-man talks on the "folly of their ways."

Long trailing of cattle and sheep rustlers, outlaws and stage robbers in which gun battles were mixed aplenty, taught warden

Hadsell that "man-to-man talks with criminals brought out their hidden virtues. He regularly has personal conferences with every one of his 200 prisoners. He says he talks to them, not as warden to convict, but as man to man, and the convicts soon believe in his viewpoint.

"But let a prisoner lie to me and he will be punished; if he tells the truth, I am lenient with him," declared warden Hadsell, who says that nearly seventy-five percent of discharged prisoners have "gone straight."

MILL MACHINERY WILL GO IN SOON

Construction Work to Be Completed Within Next Three Days

About three days work finishing odds and ends of construction is all the work left before the new paper mill annex is entirely completed, ready for the installation of machinery. The construction crew expects to move out by the middle of the week.

The last of the windows were covered with glass last week, completing a task that took several weeks. This was a large part of the work, as a large area of the walls is in windows.

The office will be finished early this week. All that remains is laying of the floor and finishing the stairs leading from the first floor. Painters are also at work on the office, and their task is nearly done.

Many of the timbers used in scaffolding and concrete forms which were torn down weeks ago are now being sawed up and hauled away to be used on a steamboat dock being constructed on the Willamette river between the Spaulding lumber company mill and the paper mill.

The lumber hoist on the south side of the building is being torn down. The donkey engine that furnished its power is being moved from the building to some higher ground south of it until the company decides where to take the machine.

An elevator shaft in the rear end of the new annex is finished and the elevator is being installed. Another elevator will be put into a smaller shaft in the front end of the building, on the north side. A cement hoist south of the building, which towers into the air about 25 feet higher than the building itself, will be left standing for the time being in case it may be needed later.

The building is 136 feet 9 inches wide and 249 feet long. It has a basement 12 and a half feet below the first floor level. This basement will be used for storing machinery, pipes, and general stores of all kinds.

The first floor is level with Commercial street, with the top of the trusses 26 feet above it. An office section extends over the front of the building from side to side, and back 28 feet from the street. This office sticks up 18 1/2 feet above the main roof.

The roof has three monitors running east and west along it to furnish light and ventilation. It is covered with a special tar and gravel composition, the last of which was put on last week. Its installation was delayed somewhat by rain.

Slate surface roofing applied over your old shingles. We have over 200 jobs in Salem. Nelson Bros., plumbers, sheet metal work, 355 Chemsaketa. (*)

VAULT EXCAVATION IS NOW COMPLETE

Expansions of Ladd & Bush Bank Building Offer Full Protection

Excavations for vaults in the old quarters of Anderson's sporting goods store, which will soon become a part of the Ladd & Bush bank, are now finished. Piers for the vaults are now in place and the cement will be poured this week.

A pit has been dug in the old

Anderson store, in which the lower of the two new vaults will be built. A layer of steel reinforced concrete, four feet thick, will be placed on the bottom of this vault and the walls will also be built of reinforced concrete.

The upper of the two vaults will be built directly over the lower, and the only entrance to the lower will be through it. This upper vault will be on the main floor level. The vaults will all be steel lined, electrically equipped, and water proofed.

A bookkeeping room in the rear of these vaults is being prepared so that the company's bookkeepers can move into it as soon as possible. As soon as they are installed there, work will begin tearing out three sets of walls in the main bank building. The present stairs leading from Commercial street to the second floor will also be torn out.

These repairs will increase the banking rooms to twice their present size, increase the bookkeeping rooms the same amount, and increase the vault space an even greater amount.

FINISHING TOUCHES PLACED ON STORE

Furniture Company Already in, Capital Business College Also

Final touches were put on the new Chambers & Chambers building last week, an a marquee over the sidewalk has finally been erected. The last days of the week were spent in painting it.

The furniture company moved into the new building a week ago and now occupies most of the first and mezzanine floors. The south end of the first floor is occupied by the Portland Music company, while the north end is still vacant. The second floor is occupied by the Capital Business college which has just completed the work of moving in. These business college

quarters are considered one of the most efficient and modern plants of that nature in the northwest.

English Workmen's Clubs Thrown Open to Women

LONDON, (AP)—Conservative working-men's clubs throughout England are to be thrown open to women. This action has been forced upon the direction of the Conservative party by the absolute equality which Socialist clubs granted to men and women.

America is welcoming the "Greater Oakland Six" as it welcomed few other cars—with outspoken praise and an eagerness to take the wheel and drive. Vick Bros. (*)

FIRST NATIONAL BUILDING RISES

Steel Construction and Concrete Work Now Well Under Way

Day by day the new First National Bank grows higher, as the work progresses rapidly. At the present rate of construction, the building will be easily completed by the date set by the contract.

Steel construction and concrete has now been finished on the basement, first floor, second floor and third floor. The work goes ahead at the rate of about one floor each week.

Forms have been removed from the concrete on the basement foundation walls and from part of the first floor walls. Outside of the steel and concrete work, nothing has been done yet, but carpenters and other workmen are expected to begin their work soon.

Save Fuel Time Money

with a LANG

Guaranteed RANGE.

Truly a delight in nickel & white

It takes much less fuel to do your work.

This item alone will effect a saving of the price of a Lang over a short period of time.

Perfect cooking and baking results are not a matter of chance with a Lang. Scientific principles of combustion and heat application make the saving of food by proper cooking a positive fact.
