NASH

Leads the World in Motor Car Value

Nash entirely encases the front brake shoes which are of die cast aluminum. And thus keeps out all water and dirt from the mechanism. Note extremely large brake drum shown at left.

The Simplest and Most Efficient 4 Wheel Brakes

Standard Equipment—No Extra Cost

Another vital Nash mechanical superiority is the special Nash 4-wheel brake system—the safest, simplest and most efficient type known to the industry.

Fully equalized to right and left, front and rear, these brakes banish entirely the dangerous swerving characteristic of partially equalized brakes.

They are of unique simplicity in design, having fewer points requiring lubrication than any other mechanical brake system.

Their instant, powerful, but velvety ease-ful pressure is scientifically distributed, 60% to the rear and 40% to the front.

The sixteen new Nash models now on display. Come in at once and personally inspect their many new attractions.

F. W. PETTYJOHN CO.

365 N. Commercial St. Telephone 1260

New Nash Features

7-bearing crankshaft motor—world's smoothest type—powers all new Nash models.

New-type crankcase "breather" which prevents crankcase dilution.

New double beam headlights with steering wheel control.

Rich new body finish colors.

All enclosed bodies are of the expensive wood frame body construction employed by finest American and European motor cars.

And a long list of added new improvements.

INVESTIGATE

The IRON FIREMAN

HAS STOOD THE TEST

For the past two years whenever the question of heat has come up for consideration in any important Salem Building, and Business Men made a thorough investigation of this all important problem, considering all types of fuel available in Salem both from the standpoint of present cost and also of assurance of future cost, and considered safe and efficient operation, the very minimum of labor costs and the best assurance of a well managed boiler plant, invariably the IRON FIREMAN has been adopted as the only burner that could give a satisfactory solution to all these problems.

When the question of heating the splendid Y. M. C. A. building was considered by an able group of business men all types of burners and fuel were considered, after writing to many stoker users the decision was an IRON FIREMAN as the only burner that would do.

The Board of Regents of the State Normal Schools, having at its command exact informa-

tion as to all types of fuel concluded that coal, plus the IRON FIREMAN would be the most satisfactory fuel—today all of the five buildings of the Oregon Normal Schools are heated with IRON FIREMAN installations, at a large saving over the cheap wood previously used.

When Mr. F. D. Bligh considered the heating of his splendid new building the question as to the burner to use had been settled, for already two of his buildings were being heated with stokers and a third IRON FIREMAN, by the way the largest in Salem at the present time, was purchased.

There is not a stoker installed anywhere in Salem that is not giving 100% satisfaction. Stoker installations are made only after a careful and conscientious consideration of all the facts involved in each plant, and stokers will not be sold unless they can perform an essential service.

YOU ARE SAFE WITH THE IRON FIREMAN

Feeding Your Heating Plant

We will be glad to discuss your heating problems and see if a stoker can be of use to you, if it can not, we will be frank to tell you so. If it can, you are wasting money and foregoing comforts every day you are putting off without one.
