## SOUTH AMERICA COLORFUL SPOT

### Monmouth Normal Speaker Tells Students About Ten Republics He Visits

MONMOUTH, Feb. 12.—"Under Ten Flags," was the title of a lecture given Friday at the normal school auditorium during assembly hour, by Edward Tomlinson, noted lecturer, writer and traveler. A colorful description was given of the ten republics of South America, the wild Indians and head hunters, the myth of revolutions, the vast and varied resources, the striking scenic beauty, the menace of the climate, perils and the striking snake story and other, and the struggle of science over reptiles, the battle of medical science to control it; the outlook for national development.

In South Five Years Edward Tomlinson who studied history and economics at the university of Edinburgh, Scotland, after the world war, was an eye witness to the devastation of Europe, the problems and difficulties of various European republics and monarchies. He realized that the economic balance was preponderantly in favor of the United States, and believed that the future of American trade and investment was in Latin America.

For the past five years he has devoted his time to exploring and disseminating information about South America. The lecturer stressed that South America is not a land of wild Indians, head hunters and revolutionists. Wild Indians are only in the remote interior of the Amazon jungle; the head hunters have joined the dodo; and revolutionists, although front page material is over emphasized. Broad and fertile plains and plateaus, great cities, splendid harbors, the melting-pot of races, limitless resources, and the marvelous art and culture were described by Mr. Tomlinson. One republic has more sheep and exports more wool than the United States. Another, possessing half the world's tin; and another supplying three-fourths of the world's coffee were mentioned. This land boasts the oldest university in the new world, among its many unusual features.

## There are many reasons for the ease of steering the new Ford

THE new Ford is exceptionally easy to steer because of the well-proportioned weight of the car, the steel-spoke wheels, the coordinated design of springs and shock absorbers, the size and design of the steering wheel, and the simple mechanical construction of the steering gear.

The Ford steering gear is of the worm and sector type used on high-priced cars and is three-quarter irreversible.

In simple, non-technical language, this means that the car responds easily and quickly to the steering wheel, yet there is no danger of the wheel being jerked from the hands of the driver by ruts or bumps in the road. A light touch guides the car, yet you always have that necessary feel-of-the-road so essential to good driving.

Strength of materials and careful workmanship give unusual stability to the Ford steering gear and housing.

The steering worm, for instance, is splined to the steering worm shaft and is stronger, of course, than if a single key were used to hold the shaft and worm together.

Throughout, the steering mechanism of the new Ford is so simple in design and so carefully made that it requires practically no attention.

The only thing for you to do is to have the front steering spindles, spindle connecting rods, and drag link lubricated every 500 miles and the steering gear lubricated every 2000 miles. This is easy to do because of the high pressure grease gun lubricator fittings provided for these parts.

## FOOD PRODUCTS DAY IS ENJOYED

### Silvertion Learns Much of Its Own Resources; Cooked Food Given Prizes

SILVERTON, Feb. 12.—The Silvertion Food Products Day, which was sponsored by the local Woman's club and the chamber of commerce and which was held on Saturday, met with much patronage. Silvertion citizens learned much about their home city by attending the all day meeting held in the Eugene Field building. Miss

Handley of the high school home economics department, was assisted by her students in demonstrating an electrically baked luncheon. All dishes prepared were made of products either raised or manufactured in Silvertion.

In the afternoon session, talks were given by local men concerning the raising of food products on farm tracts in the district, and the dairy industry and its possibilities. In the cooked foods exhibit, many entries were made. As in the demonstration cooking, only Silvertion products were used. The grand sweepstakes prize of \$10 was won by Mrs. D. Davenport, having an entry in each class, and winning the most individual prizes. Mrs. O. W. Olson took the second grand prize of five dollars.

Words won't dye a dress, or coat, or sweater. It takes real anilines to do that. That's why Diamond Dyes contain from three to five times more anilines than any other dye—by actual test. It's the anilines in Diamond Dyes that do the work; that give the colors such brilliance; such depth and permanence. It's real aniline that keeps them from giving things that re-dyed look; from spotting or streaking.

Next time you have dyeing to do, try Diamond Dyes. Then compare results. See how soft, bright, new-looking the colors are. Observe how they keep their brilliance. Your dealer will refund your money if you don't agree Diamond Dyes are better dyes.

The white package of Diamond Dyes is the original "all-purpose" dye for any and every kind of material. It will dye or tint silk, wool, cotton, linen, rayon or any mixture of materials. The blue package is a special dye, for silk or wool only. With it you can dye your valuable articles of silk or wool with results equal to the finest professional work. When you buy—remember this. The blue package dyes silk or wool only. The white package will dye every kind of goods, including silk and wool. Your dealer has both packages.
