Valuable Prizes are Available in City Beautiful Contest

Every Citizen In City Urged To Take Part; Movement Is Backed By Garden Club

Every citizen of Salem is eligible and every citizen is urged to enter the City Beautiful contest sponsored this year by the Salem Garden club.

Prizes running into hundreds of dollars in value, prizes which when all received will number more than 50, will be available for the contestants and hundreds of entries are expected before the final date for entry, May 1, is passed.

Catching its impetus from a movement spreading over the entire country, the Garden club announced its campaign this week and issued a general invitation to every home-owner or renter to join in the campaign to make Salem a more delightful place in which to live. Many Objectives Known

Cleaning up of the city, painting of buildings, establishing of lawns, planting of flowers and shrubs are all objectives of the City

Mrs. W. W. Rosebraugh, president of the Garden club, in making the announcement emphasized that the percentage of improvement made in the yard was more important than the relative beauty of the garden plot. She pointed out that homes not now improved could really make a better showing than many places where extensive work had previously been done.

All Entrants in Classes The committee planning for the City Beautiful contest agreed to group all entrants into three classes: those who do all the work themselves, those who hire part fo it done and those who hire all the work done

Entries should be made at once at the office of F. A. Doerfler, farm advisor of the First National bank or with Robert Shinn, farm advisor of the United States National bank. These men will furnish any information not given above or additional data may be obtained from Mrs. W. W. Rosebraugh, Mrs. W. B. Johnston or Harry Pearcy. Free counsel and help in making plans for beautifying of any home is offered by Miss Elizabeth Lord, Esrnet Euger or Knight Pearcy.

By next week the prize list for the City Beautiful contest will be completed, Mr. Doerfler announced Saturday. To date he has received 18 prizes consisting of flowers, shrubs, and garden materials but this list will be nearly tripled before the list is completed. Doerfler believes. Business firms approached for prizes have been very responsive to the idea of a City Beautiful contest and have contributed

Another interest- for seeding now to obtain a good ing tree is the cedar at the north stand of grass before the summer of the house which is dipped to heat is upon them. Lawns put in

The back yard planting is assisted by a number of very old fruit trees, planted many years before the present home was built. Under the shade of these trees extend the perennial border with its bed of curves and its rock wall which also serves as a boundary. The border contains a good assortment of perennials and the rockery consists of rock plants, some in pockets, some spreading, some trailing. An artistic bird bath is artfully placed beside the rustic, rock lined pool. To set off the whole back yard, there arises an immense Black Walnut high above the other trees. Boasts Vegetable Garden

This home is one of the few which boasts of a good regetable garden each year. Great care is given to properly feed the soil so that good vegetables may be grown from year to year. Very few have vegetables from their gardens earlier than from this one. Peas have a permanent trellis and all plants that tend to fall are neatly and securely staked. The lawn is always a mass of

green. It is a thick soft carpet, the result of an abundance of water and fertilizers, and correct mowing. The lawn is systematically weeded and each year sees the result a little closer to the much desired weedless lawn. gate. These are the marks of an

Better results have been obtained from the small flock of chickens when the following points have been adhered to in raising them, says an article in the April issue of "Successful Farming.

Owners of the Vale National bank have agreed to sell the in-stitution to Crawford Moore, owner of th eirst National bank of Idaho, which controls nine large banks in the Snake river valley.

City Pride Best Manifested in Tidy Vacant Lots; Unkempt Ones Eyesore and Actually are Menace

Are you proud of your beautiful city? Do visitors from other states admire your homes, your buildings, your parks? Are you proud that your city is neat and clean and presents a pleasing appearance to the visitor?

To most people the ideal condition of a city where there are no unsightly places to mar the beauty of the community, cannot be had, but when we look about us and see what other cities are doing, some of the most skeptical will change their minds.

Probably the greatest menace is the vacant lot problem. The owners of many of these lots take their responsibilty seriously and clean them up regularly in the spring, never allowing them to become offensive to the public. More often the owner's neglect makes it necessary for the city to take a hand in the matter. Why should any public citizen show such a lack of interest in the beauty and safety of his city to let his lot go untouched?

In some cities, weeds are not permitted to grow. Nor are these any city lots that are cluttered up with rubbish and if the owner does not keep the lot cleaned up he is heavily fined.

Vacant lots that are permitted to grow up year after year are not only eyesores but are dangerous. Quite occasionally the fire department is called out to fight a grass fire. Grass fires have been known to be the beginning of very disastrous fires.

In cities that know the advertising value of keeping their

community clean and beautiful, vacant lots are planted out to flowers. It is very common to see many a California lot planted to sweet peas, carnations, and roses, tended by the flower-loving Jap-anese. The example might well be followed by any average Amer-

Fortunatly if the city that has pride enough to prohibit junk lying around the vacant lots, and it is favored when untidy buildings are a thing of the past. Many cities take pride in the general appearance of her industrial plants with shrubbery, flowers and sweeping lawns. Many industrial plants cannot be readily distinguished from other buildings, and these are trying to make their places of business more desirable for their employes,

A lawn must be kept in good condition once it gets there. First must be fed continually. Periodic to feed both the grass and the growing rapidly it must be mowed often-sometimes as much as them lie upon the ground.

Watering will be essential later after a dry spell. A good thorough soaking should always be the rule. Weeds, the proverbial enemy of lawns, can in some cases be poisoned, but the most efefctive remedy is hand pulling. The development of a strong, heavy turf through fertilizing will discourage weed growth.

She carefully pulled the soil away from the thrifty looking plants as well as the infected ones and thoroughly doused the roots and surrounding soil with a good brand of lice powder.

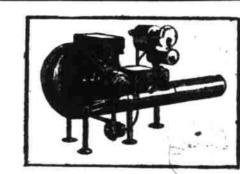

KILLS OFF ANT PEST

If anyone is bothered with the ant pest, try this method of ridgarden. Let them make it their ding your beds of them. The use of kerosene or chemicals would ruin the surrounding soil, and burning the ants out would be out for children when they can work of the question. But try pouring boiling water down the ant hole and after the water has run off A few children's garden tools and the ground has dried a little, press the soil firmly. If the ants persist and dig out of their prison, keep pressing the soil over their hole until they cease. This method will either kill the pests or so disrees, shrubs and flowers are nota- courage them that they will leave

> THE USE OF PRUNING SHEARS There's a "best way" to do everyhitng. Many amateur gardeners give little thought to the way they handle pruning shears.

Always work with the cutting blade lowermost, so that you pull it upward, though the pressure is downward on the handle of the cutting side. This allows you to cut smoothly and close to the stem from which the pruned shoot is removed. It insures against possible stripping of bark resulting from downward cut.

Watch the "set" of the blade. Don't let it get sprung. Never use shears that are dull. Keep them sharp as you work.
