Blue Blood And Ked by ROBERT TERRY SHANNON

CHAPTER XIV

There was no eloquence in his speech; the words came with nervous jerks sas he was aware that he was lacking in the power of any spoken romance that would warm her heart. Merely, in his stumbling fashion he was trying to set before her the one fact that obsessed him.

Nor was he disappointed that she did not love him. An easy victory had been no part of his expectations. Her lips, warm and quivering upon his, had not seemed like the lips of other girls and he was not disappointed into thinking that a kiss, however ecstatic, bridged the gulf between them; but his mind held resolutely to the conviction that behind her ethereal beauty and poised culture she was fundamentally human and that, in time, he might become worthy in her eyes. This, he realized, was sheer stuborness of purpose on his part, but without it, all life would be a barren vaeuum.

"You seem so terribly sincere that you make me ashamed of myself," she told him. "Of course the whole thing is an impossibility and always will be-that's it, stabbed through Eddie's breast truded slightly in a manner to why I feel so badly."

FEW PEOPLE FREE OF CATARRHAL SYMPTOMS

Sinus Troubles and Clogged Nasal Passages Are, to a Great Extent, Due to Our Climate, Says Dr. Copeland, Suggesting Treatment.

> By ROYAL S. COPELAND, M. D. United States Senator from New York.

ASAL catarrh is almost as common as existence itself. Hardly an individual in our American climate escapes attack. In one form or another it attacks practically every citizen. A perfectly normal nose should have exactly the amount of

kerchief, or at least the frequent use of the handkerchief, is an evidence of abnormality. The amount of the nasal secretion should be like the

The urge to expectorate frequently is proof of disease. No absolutely healthy person has any excess of secretion. The nose should be free and clear at all times.

As a matter of fact, one side or the other of the average nose is clogged a good deal of the time. It is a common experience for one to have, first of one side and then the other, more or less closure of the nasal passage.

brane of the nose. There is enlargement of the blood vessels, with ready congestion of these There are other cases where one or both sides of the nose may

on in early life the contour of the face may be changed by the growth of the polypus. This gives a peculiar flat or "frog-faced" appearance. Fortunately, nasal polypus rarely appears in children. It is more com-mon in adults and particularly in men who are exposed to dirt and

in many cases there are many growths. Instead of one single polypus, there may be a mass, varying in size from a kernel of corn to an English walnut. I have seen many a polypus the size of a small oyster. It is not sufficient to snare off this surplus tissue. After removal it is essential to treat the underlying difficulty. Otherwise, the poly-pus quickly reforms, and in a few eeks after its removal there is found a mass as big as before.

The presence of nasal polypus indicates, in most instances, disease of one or more of the cavities opening into the nose and known as the nasal sinuses. There must be treatment of the fundamental cause. The condition is not serious, but it

is disagreeable and demands attention from a specialist in nose
