States Employment service she was associated with Mrs. Virginia Bacon, who is now Oregon's state librarian, and of whom Miss Stewart says "one of the most brilliant and efficient women that I have ever been associated not barring such women as Mabel Willi-

brant." Miss Stewart plans to be at Chemawa until Thursday when she expects to continue her tour of inspection which she estimates

She left Washington, D. C., Sep. tember 12. She will be a dinner guest of the Business and Professional

Editors Say:

AUTUMN The first suggestions of autumn are not so much seen as feit. They are vague and indistinct, yet real. The fading of summer into fall resembles the subtle changes that overtake one at middle life, in that it is slight, gentle and unobtrusive. There is a little lessening of vision, and the eyes are weary after extended reading. So comes the resort to spectacles, not of course that they are really needed, but as "an aid to reading, a preventive only." There is a slight slowing up of physical activities, a resolution not to overdo; a feeling that one has earned the right to slacken the pace and Grant that we may realize it is relax a little oftener. Yet there is the little things that create the still zest in living, and charm and lure. Thus slowly, almost imper-'And may we strive to touch and ceptibly, but surely, comes the high noon and the shadows must of necessity lengthen toward the East.

It is in the month of Septemsuffrage movement since its early ber that summer fades into auspeakers among the women of the the horizon. The greenness of the birds have already answered the

"One wonders how previous generations of farmers managed to grow good crops and remain prosperous-without federal aid or expert interference, knowing so little of these "menaces." Perhaps

of the bugs if it wants to. We take the side of the professors whose success in research and practical application of scientific knowledge have made possible the growth of food production on this planet and defeated the efforts of the four million insects who are the active competitors of men for the food which the earth will produce in a season. Where there is one farmer who will grumble because of the inspections imposed on his production, there are dozens of farmers who will make pleas born of desperation for college professors to save them from the ravages of some new bugs that are destroying their crops.

Not always do the professors succeed. They have failed in stopping the chestnut blight. They have succeeded only in holding down the menace of boll weevil. They have failed to stop the spread of the corn borer. We know one of the premier watermelon areas in southeastern Iowa, around Coneville near Muscatine. That is, it used to be the premier growing area. Recently some insect or aphis has come in, attacked the vines and almost put an end to watermelon growing there. The professors haven't found the prevention or cure yet. The Mediterranean fruit fly is a real and not imaginary pest. Discovered in Florida this year, it has already spread as far west as Dallas, Texas. The ruined orchardists and busted banks in Florida are testimonies not knowledge of what this fruit fly has done in other lands.

The department of agriculture and the college professors croachments of insects and plant diseases, in spite of their reap crops, being encouraged by failures in the cases noted. The cottony scale at one time threatened the extinction of the orange and lemon industry and take Indian wives and grow and will be still safer with seven in California. A government entomologist found a lady-bug grain, to be handled by his comin Australia, the natural foe to the scale; the lady bugs were pany in supplying the Russians in Ireland. Besides, there is a stock in Australia, the natural foe to the scale; the lady bugs were band in supplying the lady bugs were band in supplying the lady bugs were band its problems. During leaves are falling, but not in pro brought over here and set to work and the citrus industry and the citrus industry bugs were brought over here and set to work and the citrus industry. The more flax, the more dustry. The more flax, the more brought over here and set to work and the citrus industry bugs were band in supplying the lady bugs were band is problems. During leaves are falling, but not in problems brought over here and set to work and the citrus industry. ## Bugs or Food?

"The quarantine laws have given the farm experts tyrannical power, which they have lost no time in utilizing. The ten million dollar corn borer flasco in the middle west, and the thirty million dollar Florida fly embargo, have been national examples widely followed in the various states. Flies, nematodes, weevils, earwigs, etc., are constantly being discovered as new sources for the expenditure of public funds to worry the harrassed farmer and confiscate his property for the enrichment of our busy bug bureaucracy.

one reason was because they had no professors to badger them .-Capital Journal.

Our esteemed evening contemporary may take the side

have scored some brilliant successes in combatting the en- the first white men to plant and cial note.

College professors at Corvallis were appealed to when the fruit growers were faced with ruin because eastern and Willamette valley that it demands a year basis will call for vastly foreign markets rejected their fruits with its arsenic residue investigation. The author claims from spraying, perfected a fruit washing machine, dedi- to have been taken captive by the cated the patent to the public, and averted disaster to many Indians in childhood and held for orchardists.

What the professors can do usually is to discover how to keep nature in balance, to find the right parasite or enemy of the insect invader and set him to work. Many of these pests are importations, like the chestnut blight. When they come they do not bring their neighbor enemies along so they have a free sweep until some scientist brings in their ancient foe. College professors go wrong to be sure. We aren't hearing any more about the b. w. d. agglutination test for raised beans and squashes.' chicks but this is because scientists have discovered a newer and better way to fight this disease.

The intelligent farmer of today isn't squawking at the professors for what they have done, so much as for what this name was 'river of much they haven't done. Rather than to let bugs and insect pests game.' The small inlet to the devour vegetation and starve the human race we prefer south of the 'Chick a la lim' (Cocollege professors.

Portland is Astir

THE whole state is watching with interest the rally of Portland people in the direction of city progress. The most encouraging item in the news is not the holding of a civic banquet, but the success in some preliminary steps look- good fortune to attain. Although ing toward locating some very large industries in Portland. Portland has raised the sum of \$25,000 for special surveys in this undertaking. The names of the concerns identified with the enterprise are reassuring to the public even though that his information was acquirfull disclosures of what is projected have not been made. Day and Zimmerman are nationally known engineers, rank- making these facts public were ing with Stone & Webster and similar engineering concerns. The Continental Illinois company is the investment banking interest of the reader. But one division of the Continental-Illinois Bank, the largest bank in copy of this work is known to be the United States outside of New York city. We may conclude therefore that big things are in the making which may influence profoundly the industrial and commercial developcopied. ment of Portland and the northwest.

For what benefits one section will benefit the other. New factories in Portland will afford new markets for products of other sections of the state. Money from new payrolls and purchases of materials may start as a large stream The author was wrecked on the but it trickles into small streams that reach far out from the Oregon coast at False cape south main spring.

in 1809, and with three men made Portland is the metropolis of Oregon and the rest of the his way to the headwaters of the state looks to Portland to supply the financial and industrial Red river. He speaks of the Onleadership and support for many enterprises. There are alaska river in Oregon, and the many signs that Portland appreciates this responsibility and H. R. Schooleraft was of the opinis generating some new energy to push itself forward in an ion that he referred to the Moaggressive manner.
