

FINER PLYMOUTH NOW BEING SHOWN

Features New Smartness, Performance, Comfort and Economy

DETROIT, Mich., May 16—A new and finer Plymouth offering many mechanical features new to the low-price field, is today on display at Chrysler, Dodge Brothers and De Soto dealers' showrooms throughout the country.

The new Plymouth is offered in five body styles. The new coupe, with extra wide doors and large, unobstructed carrying space in the rear deck, is finished in Ambassador brown and Thorabrown with flame striping. It lists at \$590 at the factory. The coupe with rumble seat, which features an adjustable rear window, large comfortable rumble seat, finished in leather, is black with striping in vermillion and is priced at \$625.

The new four-door, three-window sedan, a most outstanding car in value, lists at \$625. It is finished in beautiful Vinyl gray and black, with striping in ivory. A collapsible top with movable rear panel, flat mohair waterproof upholstery, large rumble seat upholstered in genuine leather are features of the convertible coupe, which is finished in Samarkand and Arcadian gray with cream striping. The smart new Plymouth roadster with rumble seat, priced at \$610, has genuine leather upholstery throughout and is finished in Tourmaline gray and blue-moss green with ivory striping.

Distinguished smartness is the achievement of the beauty of the Plymouth. Carrying a touch of continental style, it has an entirely new, graceful safety-steel body with French roof and military front; a higher and deeper radiator. The body lines are smooth and graceful and suggestive of fleetness. Carefully selected and beautiful blended colorings in highly polished lacquer are different for each body style. All enameled parts of the new car are treated with Bonderite, protecting them from rust and permitting a much better and more lasting finish.

New Performance is obtained in the new Plymouth by a larger engine, which permits remarkable getaway, thrilling speed and unflinching power at every speed and under all conditions.

The new and larger engine has a bore of 3-5/8 inches, a stroke of 4-1/2 inches and develops 46 horsepower at 2400 revolutions per minute. Piston displacement is 155 inches.

Distinctive features of the new engine, not found on other cars in the lowest price bracket, include full force feed lubrication to all crankshaft, camshaft, connecting rod bearings and timing gears.

Light alloy pistons with ventilated bridge and reinforced head, crankcase ventilation and new type rubber engine mountings front and rear are likewise found in the new engine. A new and larger crankshaft is 29 inches long and weighs 43 1/2 pounds.

MOSCOW CONFUSED BY TWO CALENDARS

MOSCOW (AP)—Retention of the old calendar for ordinary use and adoption of the five day week and 360 working day year in factories, have caused many difficulties in the latter institutions.

So while scientific bodies continue to debate the new system, the government has issued a temporary "production calendar" for those who work under the five-day week plan.

Under this scheme the workers in each factory operating on the new plan, are divided into five groups. All members of a given group are "off" on the same day, those in group one staying away from work on the first day of each five day week, those in group two taking the second day off and so on.

FATHER, SON COMBINATION

Harvey Braun (left) comes by his taste for the national sport so naturally that he may shortly be a team-mate of his father on the Sheboygan, Wis., nine. Harvey is trying out for third base with the Chairmakers, who won the 1929 Wisconsin State League pennant. The elder Braun is star hurler for the aggregation. The Brauns are believed to constitute one of the world's few father-and-son combinations.

NATIONAL LEADERS AND OREGON PIONEERS HAIL END OF WORLD RECORD FARM TRACTOR MARATHON

Top—Light tractor operated by agricultural engineering department of Oregon State college for 20 days and nights greeted at the finish line on the campus by a pioneer pageant. Center—Senator Charles L. McNary at Washington, D. C., telephoning congratulations to President W. J. Kerr (insert). Governor A. W. Norblad of Oregon stopping engine that had broken all world tractor endurance records. Bottom—College co-eds present two drivers, Dick Wagner and D. Hiller, with wreaths as old 17-day record is broken.

ONLY 15 PLAYERS MAKE LONG JUMP

By PAUL MICKELSON (Associated Press Sports Writer) CHICAGO (AP)—Lea a plug from amateur baseball to the major leagues, and sticking, is somewhat like jumping from the office boy's stool to the boss' elegant office.

Out of the thousands who have tried the baseball jump, only 15 succeeded, and still are regulars under the diamond's big top. Ten of them made the grade from college, while others either strayed into training camps and asked for work or were spotted on sandlots. Six of the 15 remained with the same club, most of them having been caught in trade winds that regularly shake baseball.

The six are Ethan Allen, Cincinnati, who came from the University of Cincinnati; Melvin Ott, whom the Giants lifted from a sandlot; Luke Sewell, veteran Cleveland catcher and University of Alabama product; Ted Lyons, who made such a reputation at Baylor college, Waco, Tex., that the White Sox signed him up before he was graduated, and Denny McFadden, an amateur the Boston Red Sox grabbed in 1926.

The other starters and stickers are: Bib Falk, whom the White Sox got from the University of Texas and traded to Cleveland; Frank Frisch, Fordham Flash, now with St. Louis Cardinals, formerly with Giants; Bob Reeves,

GERMAN FARM FOLK JAM CROWDED CITY

BERLIN (AP)—The lure of the big city is as potent here as elsewhere and the city fathers are greatly concerned about it. Berlin's population increased by 80,000 last year through immigration of people from the country, thus making the metropolis a city of almost 5,000,000. The influx exceeded by 20,000 last year's emigration from all of Germany to foreign countries.

The movement persists too, despite the fact that prospects of finding a job in Berlin are meager. The housing commission is much troubled about it because it is simply impossible to find quarters for all these new Berliners. In most cases public welfare organizations are obliged to come to the rescue of stranded individuals who, in their belief that money is easy to get in the capital, spend their last cents on railway tickets to come here. Such relief expenditure runs into millions of marks yearly.

WASHINGTON (AP)—Imported cosmetics, powders and creams come mostly from France, says a report of the American Chemical society. They were valued at nearly a million dollars in 1929.

ST. LOUIS (AP)—Louis La Beauce, of the board of directors of the American Institute of Architects says that architecture in this country is tending toward more sparing and effective use of ornament.

LEES ORNAMENT IN BUILDING

KNIGHT GREAT SIX WINS POPULARITY

Distinctive Design and Beauty Win Envious Place Among Fine Cars

Popularity of the sleeve-valve type of engine, as well as the distinctive beauty that characterizes Willys-Knight cars, has created more interest than ever before in the Willys-Knight Great Six. In comfort, style and performance, the great six has established a conspicuous place for itself among fine cars.

Five passenger sedan, five passenger coupe, roadster and coupe make up the Willys-Knight Great Six line. All are equipped with wire wheels, although models with wood wheels are offered at lower prices.

Each model presents a striking style development that is emphasized by the effective color treatment employed. The comfort for which Willys-Knight cars are famous is evident in the interiors with their luxurious cushions and smart appointments.

The public appeal for more power and speed is answered emphatically by the new Willys-Knight Great Six sleeve valve engine which develops 87 horsepower, resulting a considerably higher road speed than ever before. This is the most powerful engine ever manufactured by Willys-Overland.

A number of important changes have been made which appeal particularly to the driver. An improvement in the gear shifting mechanism, together with the use of a straight lever instead of the curved lever, results in shortening the distance necessary for the hand to travel in changing gears.

The spare wheel and tire mounting in the front fender wells has been improved by carrying the weight on the brackets riveted to the side rail of the frame. This removes any load from the fender and running board and eliminates vibration.

Outstanding mechanical features of the new great six include the popular "Finger-tip control," which starts the engine, sounds the horn and operates the lights with a button located in the center of the steering wheel; the new three spoke rubber covered lubrication; cam and lever steering gear; manual heat control; automatic radiator shutters; all internal four-wheel brakes; adjustable front seat and steering post; emergency brake at left of driver's seat; and heavy seven bearing crankshaft.

REFRIGERATOR SHIPMENTS SET RECORD

Less than two weeks after launching a million dollar newspaper advertising campaign, shipment records of Frigidaire were broken April 30 when 214 carloads of electric refrigerators left Dayton, Ohio, factories for 46 states and five foreign countries. The previous record, it was stated, was May 31, 1929 when 121 carloads were shipped.

Part of the loading platform where sixty cars can be loaded at one time is shown here, as well as a number of the freight cars that carried the record shipment. The newspaper campaign, which began April 17, was predicated upon a record-breaking first quarter and a 100 per cent increase in showroom visitors.

ELECTRIC CHAIR IS MENACE TO INSECT

STAMFORD, Conn. (AP)—An "insect electric chair" has been invented at the Bartlett Tree research laboratories here.

It is a new device for killing insects. Heretofore they have been sprayed, drowned, swatted and caught in traps.

The electrical device resembles a large ornamental lantern, of square, wide bottom. Two of its sides are made of fine wires, charged with electricity to kill insects lighting on them or attempting to crawl through.

Though fatal to many insects, the current cannot be felt by a person placing his hand on the wires, and is not dangerous to human beings. It is an ordinary house lamp current, run through a transformer.

The lantern is made to hang on trees, screen doors, or wherever insects congregate. It works 24 hours of the day. In daylight bait inside the lantern attracts the insects, and at night an electric light bulb lures them.

Dr. E. Porter Felt, who is conducting experiments to determine the usefulness of the new "chair," says that it has killed flies, beetles of some sorts, locusts and lady bugs. Death apparently is instantaneous.
