These articles presented an interesting manner such international viewpoints as the relation of the Anglican church to the Roman Catholic; the great work of Gaspari; a description of a recent football game in Florence, where the game was played to represent the manner in which it was played many centuries ago.

In compliment to the wee baby daughter of Mr. and Mrs. Ralph Barnes, Mrs. F. G. Franklin read Swinburne's tribute to a baby.

TEETH SUFFER WHEN THE DIET LACKS VITAMINS

Menus Should Be Planned to Include Vitamins, Minerals and Roughage

Dental authorities say that a child must have a balanced diet to insure proper development of the teeth. Furthermore, such a diet must be continued in adult life to maintain tooth structures already developed.

Vitamins "C" and "D" play an important part in promoting the health of teeth. Many familiar foods contain one of these vitamins. They are tomatoes, peas, leafy vegetables, yellow turnips; oranges, apples, raspberries, peaches; egg yolks, butter and whole milk.

The taste-appeal of many of these foods can be increased by the use of sugar. Put a dash of sugar to a pinch of salt in the vegetables as they are cooked. Sprinkle sugar on the fresh fruits or add it when stewing them. And of course, puddings made of eggs and milk need sugar for palatability.

In meal planning, jellies and jams should be included frequently. They are delicious accompaniments for meat as well as for bread. Their fruit content is also healthful. Good food promotes good health and teeth. The Sugar Institute
