LUMBER MILLS AT 40 PER CENT MARK

Production Lowest in Year Over Holidays; Orders Match Output

Production of lumber by mills reporting to the West Coast Lumbermen's association, declined to 40.34 per cent of capacity for the week ending December 20. This is the lowest volume reported for a six-day week, according to the association, since during the storm period in February. In these six days the industry produced but slightly more than during the five day weeks including Thanksgiving and Labor day. New business reported by identical mills was slightly less than the reduced production. During the past five weeks a total of 303 mills have operated at the lowest per cent of capacity recorded since the weeks in which the Fourth of July and Labor day holidays occurred. The outlook, according to the association, is for further reductions in production during the next week.

In the 30 week period since the week ending May 24, 352 mills have operated at 46.49 per cent of capacity, which has resulted in over one and one-half billion feet being cut from production. The decrease represents over 12 weeks production, at the present rate of cutting, for the entire industry in the Douglas fir region of Oregon, Washington, and British Columbia.

Current new business reported by 225 identical mills was 1.27 per cent under production and shipments were 8.29 per cent over. Orders received by these 228 mills during the 22 week period from July 21 to December 20 exceeded the lumber output by 2.90 per cent. During the past week orders in the rail trade decreased about 4,700,000, domestic cargo orders decreased about 27,500,000 feet, export decreased about 4,000,000 feet, while local stayed approximately the same when compared with the week previous. Unfilled orders decreased about 11,000,000 feet during the week.
