

STRIKE BIG FLOW IN NEW SCIO WELL

500 Gallons per Minute Pumped From Well 205 Feet Deep

SCIO, April 30—An estimated flow of 500 gallons per minute is the reward the Scio town council receives as a result of drilling 205 feet on property in the eastern part of the city, recently purchased from the Scio mill and elevator company.

Monday afternoon the driller placed an electric pump in the well and for two hours a 2 1/2-inch stream flowed from the new well without perceptible lowering of the supply. The flow was estimated by the driller at approximately 300 gallons per minute and the water, as it emerged, that the flow would be fully 500 gallons per minute after the pumping apparatus has been adjusted and other details completed.

At a special meeting of the town council Monday evening the well was accepted and payment finally arranged. The drilling was paid for at the rate of \$6.75 per foot, amounting to \$1337.50. Approximately 18 days of actual drilling were required to complete the depth of 205 feet, the average being approximately 13 feet per day.

Water was encountered at 150 feet but the supply was not considered sufficient, hence the increased depth of the well. Geological formations varied from black loam to gravel, blue shale, and sandstone. Large strata of bed rock, predicted to come, failed to materialize, it is stated. Perforation of the casing, which is eight inches in diameter from top to bottom of the well, was made at the 150-foot level and also near the 200-foot level, where the actual flow of water is thought to have been encountered. This, it is stated, will insure an adequate supply of water for the needs of the city for years to come. It is announced by members of the council that present preparation of connecting the pump directly with Thomas creek in event of emergency will be continued.

The water appears to be soft and pure and of fine quality for domestic purposes. Samples are to be submitted to the state board of health for analytical report.
