STANDARD RATING SCALE for Electric Refrigeration

- Is the refrigerator manufactured by a reliable company with proper experience in the electric refrigeration field?
- Has it plenty of food and shelf space?
- Is the cabinet itself well designed, sturdily built and properly insulated?
- Is there provision for the freezing of an adequate supply of ice cubes? (Quantity of ice rather than number of cubes, which may be of large or small size, should be taken into consideration.)
- Will the refrigerator constantly maintain a proper temperature for the preservation of foods?
- Can the freezing of ice cubes and desserts be speeded up when the need arises?
- Can this extra freezing speed for ice cubes be had without affecting the temperature on the food shelves?
- Can low temperatures on the shelves will, of course, injure food?
- Is there a place to keep ice cream, meat, fish, game, "quick frozen" foods or extra ice cubes indefinitely at a below freezing temperature?
- Are there various temperatures (a. extra fast freezing; b. fast freezing; and c. below freezing for storage; and d. normal food preservation temperature) automatically maintained without any adjustment?
- Does the refrigerating unit operate often or infrequently? (The fewer "stops" and "starts" the longer the useful life and the less the cost to the user.)
- How long will the cooling unit continue to cool the refrigerator even though the current is shut off? (Refrigeration should continue for 10 or 12 hours.)
- Can the back parts of all shelves, even the lowest, be reached without kneeling or sitting down?
- Has provision been made for keeping vegetables fresh and crisp?
- Can the refrigerator top be used as the top for a momentary counter while the contents of the cabinet are being re-arranged?
- Will the refrigerator add to the attractiveness of the kitchen?
- Has the experience of users over a long period of years proved the refrigerator long-lived and dependable?
