Fruit Inspectors Together Outcome of Prussian With Growers, State Officials Confer

County fruit inspectors held conference in Salem Monday preparatory to carrying out plans launched as previous committee meetings in connection with the requirements of the federal government in the handling of dried day. prunes, particularly as to the elimination of brown rot and mold in packs of dried prunes.

The conference of fruit inspect-ors was held jointly with repre-sentatives of the Prune Growers' league, department of agricul-ture, extension service of the Oregon State college, and the northwest dried fruit association.

The plan of operation was outlined in a letter sent out recently to Oregon prune growers and packers. The letter read:

"The United States food and drug administration has advised that it will prohibit the interstate shipments of dried prunes affected by reason of brown rot or other impurities. Experience proves that by general cooperation and the exercise of care in the production and handling of prunes, that the prune industry can meet these requirements without undue difficulty." Seek to Safeguard

General Market 'Our dried prunes are marketed in several different countries. It is obvious that this fruit must or consumer who buys it. If it other European currencies, unattractive or of low quality the buyer's resistance is bound

up in a few words. In addition to the cleanliness required by the government ruling, the trade demands a product made from mature, wholesome fruit.

"In order to meet these requirements, improve the quality and increase distribution of Oregon prunes, it is necessary that only good, wholesome fruit be used. Such fruit must be free from brown rot, mold, or other decomposed conditions."

It was decided at Monday's conference that fruitgrowers in all sections of the state shall be treated alike, and that no partiality shall be manifested in any one district.

Threshing Nears End At Lyons

LYONS, Aug. 10. - Threshing will soon be a thing of the past in this vicinity. Mr. Neal's machine and crew came Lere Saturday and threshed for J. H. Johnston and G. A. Berry. The threshing outfit will continue through the valley this week.

Some grain is not ready and will be threshed when the machine returns here after going to Jordan and Scio the last of this

Plebiscite is Seen As Hopeful

NEW YORK, Aug. 10 .- (AP) Cotton's readjustment to the prediction of a bumper crop provided the outstanding development in the financial markets to-

Trading on the stock exchange began the new week with volume well under a million shares and prices of industrials and utilities in a narrow, indecisive range.

Railroad securities were weak, several prominent equity issues, including Union Pacific, New York Central, New Haven and Pennsylvania breaking to new lows. There was, nevertheless, a firmer trend in the afternoon, so that the final operations on the rail stocks were mostly above the lows. Otherwise, closing prices of principal issues were irregularly lower and net changes largely fractional. The turnover was 709-954 shares.

Against the wide break in cotton a few favorable considerations were offered. Most prominent was the results of the Prussian plebiscite, with its victory for the present government and the inference that precent financial policies can be continued. There also was the welcome appearance of a stronger grain market and further recuperation by sterling exchange have an appeal to the housewife in common with rates on several

Extreme local losses of more than \$7 a bale in cotton, bringto be revealed through reduced ing the lowest prices of the century, were reduced to net declines The commercial requirements of \$5.45 to \$5. Trade circles were for dried prunes may be summed rather pessimistic as to the prospect of much recovery. In some quarters it was suggested that an indefinite period of low prices for commodities might be at hand.

Output Only About 50 per Cent Over Northwest; **Depression Hurts**

The Pacific northwest dried prune industry is approaching its 1931 harvesting and marketing season under circumstances that would normally be most auspicious, and promising of an active, successful season. Unsettled economic conditions have largely displaced all normal marketing considerations. considerations, however; and the market outlook is highly uncer-tain as a result.

northwest this season, that generalities have little significance garded by the trade as seriously in summarizing the 1931 prospects. Instead, a great number of independent factors are each extended by the trade as seriously affecting total output. Some packers are of the opinion that independent factors are each extended by the trade as seriously affecting total output. erting their influence; and each set the June drop, which was pf these factors must be consid-comparatively light in many disered on its own merits, in arriving at any understanding of this industry.

Fifty Per Cent The northwest is in a fairly

favorable situation so far as probable quantity of output is concerned. Only a 50 per cent crop is now forecast, but sizes will be medium to large, with probably one-third sizing 30-40, 50 per cent 40-50s, and the reper pound. In contrast, Califor-"You don't know, then, if she due to extreme heat in producing duction of dried prunes is estimated in unofficial trade surveys Quoted Yet "Are you in need of money, as 33,000 tons less than the actual 1930 production. France has but one-half of her 1930 volume now in prospect; and Jugo-Slavia reports small estimated velume,

The California crop in 1929

dicate August 1 estimates around 85-95,000 tons, compared with July 1 estimate of 102,000 tons. Production in the northwest is as irregular as has ever been reported Rain, frost, and winds all exerted their influence at

ssoming time; and great are vagaries resulting therefrom. In general, the upland, billy or-chard lands have the best crop of prunes. Most of the lowland orchards, where tree growth is heaviset and foliage is most lux-uriant, have very light crops.

tarted In June
One disturbing factor is the drop which started in June, and is still continuing into August. This drop, if it continues at its present rate, may result in a downward revision of production estimates. The extent of the drop was accentuated by high temperature on July 19; the theory being that sap flow from the roots to the growing fruit was considerably interrupted. The effect of Production and marketing fac- the drop is serious in some or-tors are so varied throughout the chards; but, unless it continues at

> tricts. Date of harvesting will probably be nearly two weeks earlier than last year, Italian harvest throughout the entire northwest will probably start around September 1; with Petites and Dates in south Douglas county a week or ten days earlier. Weather during August may change these dates somewhat.

Lightest production is probably in the north and south extremimainder smaller than 50 prungs ties of the district—that is, Clark Portland docks. county, Washington, and Douglas nia's prune crop for drying shows county, Oregon. menth indicate "absolutely further trading possible" until the present credit situation is settled. One packer expresses the thought that this situation may prove a blessing in disguise, due to the large re-export and repacking business that has developed in Germany-a business that possibly might be developed directly by American packers with the consuming countries who have hitherto obtained their supplies through Germany.

No Hope For High Prices

Domestic inquiry is very slow; and little hope for high prices is held, if domestic markets should be asked to absorb the customary foreign quots of Pacific coast dried fruit. A packer advances the idea that, with values of a nearly all canned foodstuffs definitely lower than a year ago, and with heavy carryover in many lines of canned goods, selling competition on the part of these competitive go will be most acute this season; and the dried prune industry may be confronted with necessity of drying dates, it now appears that much low-priced selling, if the first California stock will be industry depends too greatly on industry depends too greatly on domestic markets for their out-

Offsetting this condition, however, is the fact that dried prunes can be sold at reasonable values and still undersell the cheapest of their canned-goods competitors. Compared with most dried and canned fruits, the Pacific coast dried prune is in a dicate tentative business ranging fairly favorable position, due to the inherent excellent quality of the fruit, and the low retail prices possible. These considerations are of prime importance to the individual housewife, in ed Santa Claras as follows: 20- times when economical buying is essential.

Another very favorable aspect Foreign economic conditions to the 1931 market is the fact
