INFLUENZA VICTIMS SHOULD STAY HOME

"If attacked by influenza or even a bad cold, remain at home and in bed as a duty to yourself and to others," cautions the Oregon State Board of Health in a bulletin issued this week. "You will recover more quickly and others will be protected from a like infection," the report adds.

An epidemic of influenza is sweeping over this country and although most of the cases are mild it is known that the complications of this disease are frequent especially after the epidemic has been established. Every case of influenza should be seriously considered and the patient should take all the precautions that should be taken with any other serious infection. Just because you are not bedridden with this disease at the start does not mean that you can expose yourself to a more virulent type of infection. Cases convalescing from influenza are highly susceptible to other infectious diseases.

"Promiscuous coughing and spitting spread influenza and bad colds. The lack of nourishing food due to economic conditions is a predisposing cause to influenza. Correct diet must include milk, fruit, green vegetables and cereals. Avoid fatigue; avoid crowds; have plenty of rest, sleep and fresh air."
