RIVER PROGRAM IS DISCUSSED BY KIPP

Willamette Likely to get Early Development is Speaker's Belief

R. H. Kipp, executive vice president of the Columbia Valley association, an organization which is active in the development of the Columbia river territory for power, navigation and irrigation, discussed river development at a meeting of Rotary yesterday noon. He refrained from discussing the Willamette river canalization because the engineers report is not to be released for some months yet and he felt it would be improper for him to talk about it until it has been made public. He intimated however that its contents would be favorable to river development.

Kipp devoted most of his time to telling the plans of engineers for developing the Columbia. For hydro development ten dams are listed, six on the upper river in Washington and four on the middle river from Warrendale to Umatilla. Regarding the Columbia basin irrigation project the original gravity plan has been abandond because of its excessive cost of $393 per acre. Now the pumping-power project at Grand Coulee is favored. The cost per acre would be $176.40 but there would be power for sale as well.

First Development May be on Willamette

The army engineers projected series of dams, one series A with four dams at Warrendale. The Dalles, mouth of John Day and Umatilla. These would be low dams and could be built one at a time. Series D called for two dams, one at Warrendale and a high dams, 250 feet at The Dalles which would completely submerge the other two dam sites. This he said would utilize 40 percent more power than the series A combination. It would also provide slack water for navigation several miles beyond Pasco. He predicted that the first development would probably come on the Willamette for navigation because the cost was so much less,—only a fourth of any of the dams proposed for the Columbia.

Vast hydro power at tidewater is the great advantage the Columbia development offers, says Kipp. Huge industrial plants may locate here and take advantage of water transportation for low freight rates. Agriculture would be benefitted through water transportation nearly 300 miles inland.

Chester Cox, speaking for the building congress, urged patronage of local contractors, labor and materials in all building operations.
