ENDED IN AUGUST

Planning and Ordering of Perennials and Shrubs May be Done now

By NETTIE REEVES When the month of August arrives, we think there is no more work to be done in the garden, but we are mistaken and find

that there are many things that

may be done in the fall as well as in the spring. If we plan to do a large part of the planting this year, we will be that much ahead next spring. Orders for perennials and shrubs should be made now, for the planting during September and

This is the ideal month to sow lawn seed, because the grass seed will grow without the competition of the many weed seeds we find coming up in the spring, and the grass will have time to establish a good sod before winter. Better results will be obtained if watered well, than to wait for the fall rains.

Oriental poppies are more easily Tonsplanted during this month, when they are more or less dor-

Deciduous shrubs, such as the privet or barberry, will probably need another trimming during August, especially if they have been well fertilized and well watered. The more often a hedge is trimmed the more compact it will become. The yellowing and drying up of the leaves on the top of the hedge after shearing is due to sun scald. Usually this indicates that too much material has been cut off or that the hedge has not been trimmed often enough during the growing season.

Pansies are not hard to grow if the seed are sown in a cold frame. After the plants have their second leaf, they can be transplanted to another part of the coldframe and set three inches apart each way. These will give you fine large, vigorous plants early next spring.

One of the best methods to get people interested in gardening, is to visit some of the finest gardens and see the beautiful flowers and

tinue to bloom as if they had season. never been disturbed.

In order to grow prize winning America. flowers one must have well prepared flowers. To increase the size | Overture, In Sunny Spain . King of the blossom, an application of Reverie, Sabbath Chimes amonium sulphate or nitrate of soda to the plants just as the buds Intermezzo, Flickering Firebegin to show color will tend to should be dissolved in water at the rate of one tablespoon to a gallon and the plants well watered with this solution. Also removing all the buds except one on the stem, will increase the size of the remaining flower. This should be done several weeks before the Valse, Under the Stars...Jewell

bloom is to be out.

Perennial flower seed may be sown this month, preferably in a cold frame. An excellent medium in which to sow them is a mixture of equal parts of sand and peatmoss. This will contain no weeds. will not cake and is easily wa-

Peonies should not have their tops cut off until the leaves begin to turn yellow. This also applies to all other perennials. The leaves of any plant are necessary for the manufacture of food, and in the case of perennials this food must be transferred to the roots, where it is stored until growth begins.

German iris, if they have not been divided the last two or three years, should be divided as early as possible during this month to allow them to become established before winter so that they may bloom the next year.

Flower beds which are through blooming should be fertilized and spaded to make them ready for fall planting.

Levi Pennington Will Speak Today

STAYTON Aug. 13-Dr. Levi T Pennington of Pacific college will be at the services to be held in the park here on Sunday evening. His talk will be on "Prohibition and Temperance." Dr. Pennington is presented by the local Church of Christ and all are invited and urged to hear his address.

"PEACHES" BROWNING REDUCES - AND HOW!

"Peaches" Browning dropped thirty-five pounds in one year. She got tired of having newspaper men refer to her as the "chubby" young wife of Edward W. Browning, New York's most famous "Daddy." But almost every one the former Frances Heenan consulted about the matter prescribed heavy symmasium work, "Peaches" couldn't see this, so she started dieting. An orange, or a glass of orange juice and black coffee comprised her breakfast. For lunch she ate tomato juice, or grapefruit juice cocktail, a dressing-less saled and coffee, or tea, and a few slices of Melba toast, unbuttered. Dinner was the big meal of the day, but not too big: a clear soup, roast meat, baked potato, lettuce salad and a fruit dessert. Ples, cakes, and ice cream were off her menus. She never lost more than three ounces a day. But it counted up in the end. If you don't believe it, just glance at the pictures of "Peaches" shown above. Before and after might well be the caption for that layout! "Peaches" now says she feels better than she ever has before. She's fit for the front line of a Broadway musical show, or to model for a fashionable gown shop. Though she didn't go in for heavy athletics she way musical show, or to model for a fashionable gown shop. Though she didn't go in for heavy athletics she found that light calisthentics greatly aided her quest for slimness. Here's her measurements: height, 5 feet, seven inches; waist, 28 inches; hips, 36 inches; ankle, 8 inches; wrist, 6 inches and neck, 13 inches. Doesn't sound like chubby "Peaches" at all, does it?

MONMOUTH, Aug. 13—To date there are six applications for the office of post master at Monmouth R. E. Derby, bus driver; E. M. Ebbert, barber; Ted Graham, bookkeeper; R. B. Swenson, newspaper publisher; A. J. Whitaker, deliveryman; and O. A. Wolverton, present incumbent.

Wolverton is serving his 17th year in this service. 'He was first appointed during the Roosevelt administration, and served under Wilson until a new appointment was made. He was reappointed when Harding became president; continued on under Coolidge and Hoover, hence has served under five different administration. He was born and reared in this community. Two of his brothers were the late Federal judge, Charles E. At Park Services Wolverton; and Rev. Bruce Wolverten, both of Portland.

Entertainment to Feature September 30 Affair For Non-Members

FAIRFIELD, Aug. 13-An interesting meeting of the Fairfield grange was held Friday night at the new grange hall. Visitors present were L. S. Lambert of Stayton, Pomona Master, and Mrs. Ellen G. Lambert, district chairman of the Home Economics committee, Mr. and Mrs. W. R. Dallas, Miss Pearl Scott, secretary from Red Hills grange and F. E. Wilson, master of Red Hills grange and Mrs. Wilson,

The suggestion for a meeting September 30 to be held by all granges everywhere received favorable vote by all present. The purposes of this meeting will be to invite non-members to join in an evening of entertainment put on by local talent.

Committees appointed by the H. E. C. president, Mrs. F. P. Runcorn are as follows; Mrs. Ben Hall, chairman; Ben Hall and Fred Rogers to serve at the next social meeting and dance to be held Aug. 26. Mrs. B. J. Miller, chairman; B. J. Miller, Mr. and Mrs. Ward Lundy, Freeman Mar-Friday, Sept. 9.

Pomona Master, L. S. Lambert and by Mrs. Lambert, tallied and paid Fairfield grange high compliments for their outstanding achievements during the past few years. The remainder of the program included talks on growing and cultivating flowers and gardens by Mrs. F. R. Nusom and Fred Rogers; "chickens and their care" by Mrs. F. M. Hill, and "A trip to the beach" by Mrs. William McGilchrist.

OW DOES YOUR GARDEN GROW

By LILLIE L. MADSEN

Lillie Madness ly. Dalsy as a charming annual. Not Transval daisy listed as a "Cali-long ago a reader asked me about fornia daisy." there are catathis, saying she had been un-able to find the African Daisy of it as the Scarlet Cape daisy or listed in her catalogues. Investi- the Scarlet Daisy of the Cape. nomenclature - Dimorphatheca. with the flower. I notice that most Oregon growers, however, refer to it as the African Dalsy.

African Daisy Popular Of the many lovely daisies, I find the African Daisy most popular at present, For one thing it is a quick flowering annual, thaler and John Marthaler on re- often coming into bloom six freshments for regular meeting weeks after the seeds are sown. Its colorings are also remarkable. Particularly are the brilliant apricot and lemon-colored varieties attractive. It also comes in orange, white, buff and salmon.

The African Daisy grows about a foot high and its flowers are around two and a half inches across. The texture of the flowers gives them a short of glittery appearance in the sunshine. Just recently I have seen fine displays of the African Daisy at

the Good Gardens at Stayton and at Lamberts at Portland. Visitors are very welcome at both of these gardens. Those of you who have not seen this daisy will do well to become acquainted with it during this summer. Perhaps you will find it just the thing you want to add to your garden next spring. Another daisy which is rapidly

gaining in popularity and which, too, is not listed in seed lists as a daisy is the Transvaal daisy. You will find it under the name seed house refers to it as the Bar-Miss Richards and her mother Mrs. Robards has a wide cir- berton daisy. This discrepancy in and most confusing to us amateur

gardeners. Perhaps we had better There! I have a chance to endeavor to get congress to "do say "I Told You So." Aren't you something about it."

California Invades Field ly those few The Transvani daisy is a bril-hot days of last liant marguerite shaped flower, week when you with long pointed petals radiating didn't even feel from a small yellow center. Its like going out color scheme ranges from white turning to orange and from pale pink to the faucets? It dark crimson. It also comes in is something to shades. The daisy is hardy and, remember when I believe, will grow as a perenthe next hot nial in the Willamette valley. Last spell arrives - autumn I saw some at a flower which may not show—I am under the impression be followed by it was the flower show at the state rain so quick- fair-and someone called it the Some weeks just a little habit of California's. I mentioned the African In no catalogues have I found the

gation on my part reveals that Now that I am on the subject. most of the cataloguers have of dalsies, I think that I shall go listed it under the simple little ahead and mention a few others I find interesting. While it is not In spite of this it is a lovely daisy planting time at present (exflower and well worthwhile to cept in the cases of sowing seeds add to any garden. Sometimes it of certain varieties) it is decidedis called Star of the Veldt, a ly daisy "seeing time." For those name I much prefer, if I am of you who are interested in makto have a speaking acquaintance ing additions to your garden, I would say that now is the time to look about you. There are many lovely gardens, both public and not so public which welcome visitors. A little time spent at blooming season at these gardens often proves profitable to the would-be gardener.

Painted Daisy is Hardy The Painted Daisy, formally listed as the Pyrethrum, is not in bloom now. This is a hardy daisy well known to most of you. There is another pyrethrum not as well known as the pink and rose one of early summer. This is the Golden Feather, which is cultivated more for its foliage than for its bloom. The flowers usually come out late in the sea-

The small English Daisy (Bellis) is also very well-known but new large variety of this group which is quite interesting. It comes in the usual daisy colors of red, pink and pure white. The stems are often six or eight inches long and the flowers measure two inches across. This is, of course, a hardy perennial. The seed should be sown this month. The Swan River Daisy (Bra-

ing annual, growing about ten inches tall. It somewhat resembles the cinerarias. The colors are various shades of blue, white early May. and rose. This is a valuable little border plant to fill in where the have stopped blooming. Perennial Good in Rockery

WALT DIENE

KEIZER, Aug. 13 Beardsley and his partner, Walter Piper, arrived here this morning by airplane from Klamath Falls, where they had flown from Chicago to visit Beardsley's parents. The two men have a furnace foundry concern in Chicago. The flight from Chicago was made in one day, and from Klamath Falls here in an hour and a half.

On arriving here, Beardsley flew so low that his brother-inlaw, T. A. Poole greeted the pair before they landed, the mu-

tual "hellos" being audible. Beardsley will remain here until Tuesday to visit his brother, Arthur Beardsley and sisters, Mrs. T. A. Poole and Mrs. T. B. Morgan. Piper flew on to Tacoma today and will return for his partner.

The men are flying a 425 horsepower Lockheed plane, speed of which reaches 200 miles an hour.

Beardsley has flown west each summer in recent years to visit relatives.

rock or Alpine Daisy. Its foliage grows no higher than six inches and gives an appearance of clinging to the ground. It is covered with pink and white flowers throughout the summer and sutumn. As its name indicates, this little daisy is particularly good in the rockery. The seeds of this may be sown this month.

The Midsummer Daisy (erigeran) is another good perennial. It grows about 18 inches tall and is excellent for cutting. This daisy comes in rose, pink, yellow, orange and white colors.

The Shasta dalsy comes under many names, most common among these being the Marguerite and Ox-eye. It is so well known that the better houses are listing a I feel it needs no introduction (as in the case of the visiting Rotarians). But I do wonder if it is generally known that there are several varieties - that some bloom in May, some in June and others from August until frost. Among the latter group is the Mrs. C. Lowthian Bell, the flowers of which often measure six inches across. The height is about three chycome) is a very free-flower- feet. A low-grawing Shasta daisy is the easily flowering Early Gem. It never gets much taller than 12 inches and comes into flower in

The seeds of the Shasta daisy may be planted this month-had more low-growing bulb flowers they been planted in July it would have been better. They should be transplanted as soon as they are A perennial daisy is the little large enough to handle.
