Fights Tuberculosis Germ

DR. STEPHEN J. MAHER

In a paper which he had intended to entitle "How to coax tubercle bacilli to commit suicide" but decided such a title would be too flippant, Dr. Stephen J. Maher, internationally known authority on tuberculosis, recently described to a gathering of physicians at Shelton, Conn., how he had developed a method of transmuting tuberculosis germs into harmless bacteria, thus opening a new path towards a possible specific cure for the dreaded "White Scourge." While warning against premature optimism, Dr. Maher believes that his discovery may prove the starting point for scientists the world over to make a new, intensive attack on the scourge. Dr. Maher, who has specialized in tuberculosis since 1900, received the Laetare Medal from Notre Dame University two years ago for his work in that field.

It is the understanding here, Morrison said, that funds allotted Scio in this matter are not to be repaid, as it is part of the government plan to relieve unemployment. Preference is to be given those who have been assisted by the Red Cross and to dependent war veterans.
