# Wheat Drops, Then Gains 1c

**April Summaries Indicate** Increased Yield of Winter Wheat

CHICAGO, April 1 .- (AP)-Wheat scored a cent a bushel advance today after breaking afresh the season low-price record for new crop deliveries, July and September.

May wheat, an old erop month, led the upturn, aided by estimates that Canadian export business the past 48 hours bulked large at 2,-500,000 bushels. Better milling demand for domestic wheat was also in evidence, and there was much skepticism voiced that drought relief for crops southwest and west had been adequate.

Wheat closed firm, 1/2 to 1 cent above yesterday's finish, May 964-4c; July 854c; corn 4-%c up. May 60%-%c; oats %-% c advanced, and provisions unchanged to a rise of 2 cents.

Yield Estimate Gains The first of the April unofficial crop summories estimate the 1936 probable domestic yield of winter wheat at 543,000,000 bushels, against average forecasts of 522,000,000 a month ago. Crop condition was placed at 75.8 per cent, compared with 69.8 this time last year and a ten-year average

Only transient setbacks of less than a cent for wheat resulted from overnight moisture southwest and west. Primary receipts of domestic wheat were the smallest in several weeks, and some improvement of flour trade was reported, spring wheat mills selling 41 to 48 per cent of capacity the past week compared with 32 to 33 per cent the week previous.

Corn and oats displayed independent firmness, corn receipts being scanty. Provisions reflected upturns of

hog values.

This is the largest amount of money involved in any single meeting of the highway commission for many years.
