Cherry and Prune Spray Tips Given

Growers Should Watch for Syneta Beetle as **Buds Open**

DALLAS, April 19 - County Agent W. C. Leth states that during April and May cherry and prune growers should be on the look-out for the syneta beetle that work on the foliage, fruit clusters, and open blossoms of these fruit trees.

The beetle eats holes in the leaves and blossom petals and later gnaws out some cavities in the fruit and in the fruit stems. It is especially injurious to cher-

According to County Agent Leth the most satisfactory spray yet recommended by the Oregon State experiment station has been the application of 4 pounds of lead arsenate plus 2 pounds of lime to 100 gallons of water or Bordeaux mixture. Some growers combine the syneta beetle spray with a 3-3-50 Bordeaux spray for brown rot blossom blight.

Two Applications B st The most effective control measures call for two sprays, but if only one spray is used it is most effective if applied as the blossom buds are white just before opening, according to the experiment station recommendation. Extension Bulletin 484 for Oregon stone fruits is available at

the county agent's office. A few growers have been using 30-70 lead arsenate-lime dust for syneta beetle control with favorable results.

Insurance Saving

Through the medium of an extensive newspaper campaign time buyers of Chevrolet, Pontiac, Ol'smobile, Buick, LaSalle and Cadillac passenger cars in Orewith rates generally included in finance plans, is available only on the General Motors installment plan.

It was pointed out by Mort S. GMAC, that under this plan the purchaser receives a comprehensive policy in the General Exchange Insurance corporation, also a member of the General Motors family. This policy protects the owner against fire, theft and accidental damage including earthquake, flood, hail, explosion, windstorm, collision and many

other similar hazards. complete low cost General Motors car financing service. Other features were described as: Simplicity of the monthly payments to suit the budget needs of the buyer; no service charges; no bonds; no extra fees of any kind. The advertising now appearing sums up the plan as a complete General Motors service.

7 Cent Slump on

PORTLAND, April 19 .- (AP)-Declining eastern wheat markets resulted in a weaker tone along the Pacific coast, the department of agricultural economics said today in its review for the week ending April 16.

Portland prices slumped northwest wheat while local mills bought only for immediate needs. Puget Sound and Columbia river terminals reported receipts totaling 508 cars.

The northwest barley market held steady but trading was light. Nearby mixed feed manufacturers and feeders provided an outlet for corn and the market remained firm during the week. Light remaining stocks reflected heavy feeding of oats.

Concern Is Felt, Prune Situation ers totaled 542 bales.

Oregon Ships 22 Carloads by Rail in March; **Exports Listed**

Northwestern dried prune packers and growers are much concerned as to the probability of marketing this season's crop of prunes before the 1937 season commences. Unless the demand increases and stocks move more rapidly into consumption, it is expected there may be a carryov ; according to some of the larger holders. Packers report continued interest from domestic and foreign sources, but buyers apparently think prices are too high for purchasing more than immediate needs, and the consumer demand is very slow.

It is thought that, if quotations should be materially lowered, there may be a speculative desire on the part of jobbers to purchase Offered to Buyer for long holding, but packers have held firm and feel present pared with prices of other food commodities.

Limited sales have been reported the past two weeks at the ley yards this spring. following quotations: 30-40s, 6-6 1/2 c; 40-50s, 4-4 1/4 c; 50-60s, gon are being advised of a saving 3 1/2-4c; 60-70s, 3 1/4-3 1/2c; 70of 25 per cent on insurance. Hops Quiet But Market Holds Up

Eighth Week Passes With No Sales of California Hops Reported

Pacific coast hop markets coninued extremely quiet and inactive during the week ended April 14, according to the weekly hop market review of the bureau of agricultural economics. The market tone, however, appeared about steady. Trade statistics indicate growers in the three coast states were holding only 11,199 bales of 1936 crop hops on April 1, compared with 32,449 bales of 1935 crop hops in the same position April 1, last year. March sales of 1936 crop hops by grow-

Oregon hop markets were again very quiet. No sales of 1935 or 1936 crop hops were reported by Oregon growers. One sale, however, of 150 bales of 1934 crop hops was reported, at 15c per pound, net grower. Contracting of hops for future delivery was reported limited to one contract, covering 25,000 pounds of the 1937 crop, at 21 %c per pound, net grower.

Spot hops of the 1936 crop were reported quoted nominally at 35c-40c per pound to grower, according to quality. 1935 crop hops were nominally quoted at 27c-30c, and 1934 crop at 15c-20c per pound, net growers, according to quality. Oregon growers were reported showing much interest in the formation of the pool of older growths, with a large proportion of their holdings reported already pledged to the

ducers applying for it. Growers, in order to participate, must file notice of application and partial compliance with the program prior to June 25, Donaldson said. The program will be administered through county AAA groups.

duties are intended to develop described in the brief bulletin.

the infant Oregon industry around cooperatively - owned scutching and retting plants, since the United States produces less than 15 per cent of its fiber flax requirements. It also will promote new use for land which otherwise might be planted in

Fly Killing Saves Loss, Gooseberry

surplus crops.

Immediate preparation of a 'hot reception" for a little yellow-winged fly will save a great deal of later cussing directed at current and gooseberry maggots. Although expressed in a bit

more scientific language, such is the essence of a new O. S. C. Approval of a new program station circular, No. 121, entitled, "The Currant and Gooseberry Maggot," by S. C. Jones, assistant entomologist.

Control of these pests is very much like that used for controlling the cherry fruit fly. The object is to kill the adults soon after they emerge from the soil and before they start laying their tion exceed normal this amount eggs, which is usually late in would be pro-rated to all pro-April or early May, depending on the season. After the eggs are laid no amount of spraying will do any good, because these are deposited under the skin so that the newly hatched maggots are protected from the start.

Detailed methods for applying the spray, composed of arsenate Subsidies, paid from import of lead, molasses and water, are

Spray Timing Is

Careful timing of from two to three spray applications of bordeaux mixture is the secret in the control of walnut blight, the most widespread destructive disease of the walnut in Oregon. How to make sure of such proper timing, and how to combat insect pests as well as diseases of the walnut, are described in a new extension bulletin No. 500, issued at Oregon State college. The bulletin is by P. W. Miller, federal pathologist, and B. G. Thompson,

Vital to Walnuts

Control of the blight has proved to be a practical matter even under severe infection, so far as grafted orchards are concerned. Difficulty in timing is insection. creased in the case of seedling orchards, in which the separate trees are likely to reach the blooming stage at different times, The bulletin indicates by illustrations and descriptions exactly when to apply the three spraysone in the early pre-bloom period, one in the late pre-bloom period, and another in the post-bloom stage. Sometimes the first may be omitted, but never the second, say the authors.

Control methods for two kinds of walnuts aphids, web worms, scale insects, caterpillars and assistant entomologist at the ex- other occasional pests of the walnut are included in the bulletin,
