View of Berlin elephant compound

Opening of another zoo season calls attention to the numerous improvements made in this field of instructive recreation. European zoos have set the pace by arranging novel exhibits of their animals, replacing the usual cages and fences with moats and low rings of iron spikes which effectively confine the animals yet permit an open view to spectators. The first zoo on record was in China as far back as 2000 B. C., but it has been only comparatively recently that the municipally-owned zoo designed for public entertainment and enlightenment has flourished.
