A bright way to solve that "mid-summer frock" problem is with this feminine style! There's no better way to keep your sprits up when it's "hazy in the shade" than by slipping into this frilly delight that's a dream of daintiness and frills. Ideal for parties, teas, and lively festivities—your puffed or ruffled sleeves, interesting yoke, and flared skirt will receive admiration on every occasion. Every "twelve to twenty" will want more than one version of Pattern 4454, made up in crisp cottons that are so popular with the "younger set" today! Try cool cotton lace, organdy, eyelet batiste, or swiss.

Pattern 4454 is available in misses' sizes 12, 14, 16, 18 and 20. Size 16 takes 4 1/2 yards 36 inch fabric. Illustrated step-by-step sewing instructions included.

Style-Smiles --- by Gretchen

"Hasn't his orchestra the most wonderful arrangements? It's practically impossible to recognize the tune!" No doubt that's the acme of swing enthusiasm, though our appreciative model takes her modern dance frock with old southern quaintness. It's white taffeta, polka-dotted in black—full of charm and ruffles and held out in the skirt by slightly stiffened—hoops! (A deep ruffle in the hem.) . . . Long flowing lines dominate the black chiffon. Two scarfs cross at the high waistline in back to go over the shoulder, are gathered in front and released to hang to the floor. Two huge creamy flowers bloom under her throat.—Copyright 1937, Esquire Features, Inc.

Hard Rock Work In Tunnel Ended

A week of snail's pace headway on the city water department's tunnel on upper Rural avenue appeared early yesterday morning to have brought the end of slow progress on the job. WPA workmen reported that toward the end of the late shift the extremely hard rock in which they had been working began to run out and in its place was found a softer material.

The week's labors in the flinty rock, which power drills penetrated only with difficulty, slowed the tunnel boring operations to such an extent that only approximately 13 feet of forward progress was made. The crew was near the 190-foot mark yesterday with approximately 310 feet farther to go to reach the new Fairmount reservoir.

Because of the haphazard outcroppings of hard rock encountered in construction of the nearby reservoir, water department officials were not certain the tunnel crew might again run into difficult drilling.

Next Thursday at 5 p.m. is the deadline on filing of the recall petitions, which by law must bear

Irrigation Meets To Be Wednesday

Two irrigation meetings will be held Wednesday, July 21, according to Harry L. Riches, county agent, as follows:

9:30 a. m.—Meeting at the farm of R. H. Clark, two miles east of Salem on the Pen Road.
1:30 p. m.—Meeting at the farm of John Harper, near Ger-rain, across the road from the Checkerboard service station.

The purpose of these meetings is for persons who are interested in irrigation to get together and see the irrigation set-up in operation on each of these farms. This will also be an opportunity for you to discuss the different phases of irrigation such as preparation, installation, operation, etc.

Mr. Clark and Mr. Harper are both using the sprinkler system this year, and there will also be an opportunity to see a field of Ladino clover on the Stanley Duda farm which is being irrigated by flooding.

Strawberry Picking Closes In Silverton Hills District

SILVERTON HILLS, July 17.—Strawberry picking in most of the Silverton Hills fields was brought to a close this week. Several of the growers report a very good yield, while others report a 50 per cent loss from spittle bug, heavy

June rains, and early heat following the rains.

Mr. and Mrs. Eldon Mulkey, who have moved to their newly acquired farm in this community, are making numerous improvements to the property. The farm was formerly known as the Magness farm.

Realtors Told of Accidents' Causes

In every automobile accident there are three factors: the car, the highway and the driver. Drivers blame the car, but manufacturers are making them safer every year; they blame the highway, yet there too, safety is being steadily increased. Yet accidents increase about twice as fast as the number of automobiles. The answer, John Carrick of the safety education division of the secretary of state's office said in a talk before the Salem Realty board Friday, is that the driver is to blame.

Every accident is avoidable excepting those caused by mechanical defects in the car which were not apparent. Blowouts caused by worn out tires cannot be classed in that exception. Speed is the primary factor in accidents, said Carrick, but the speed that causes the accident may be 25 miles an hour or 85, depending on conditions. The truth is, he said, that too few drivers realize what "keeping the car under control" with regard to clearance really means.
