#### Voluntary Control Along With Domestic Market Protection Urged

By PAUL D. SHOEMAKER HARRISBURG, Pa., Nov. 11.—On the eve of the special session of congress to enact permanent farm legislation, Louis J. Taber, of Columbus, O., master of the national grange, suggested today 10 basic principles, which he told delegates to the annual convention, should be contained in any workable agricultural program.

Commending President Roosevelt for calling the special session, which is to convene Monday, in ample time for congressmen to give statesmanlike study to the subject, Taber said "congress, in redeeming its pledge to pass such a law, should give full play to the processes of democracy, of discussion, of elimination, of compromise and of approach to a sound, workable program."

Outline Provided Basic principles suggested by Taber:

1. It should seek to increase the farmer share of the nation's income and give to agriculture parity of income.
2. It should be built on voluntary cooperation rather than a governmental straight-jacket. It should provide for continuing farmer control.
3. It should grant basic exemptions and give maximum benefits to the family sized farm, placing as much of the regulation as possible on commercial and large-unit operators.
4. The legislation should contain a sound framework for a long-time land policy; provide for retirement of submarginal land, and increase of forestry, water and wild-life resources.
5. It should be built around the soil conservation act, with benefits going to all farmers who follow good soil practices.
6. The program must be sufficiently flexible to protect the interests of all sections and give special assistance to surplus and export crops.
7. The American market must be guaranteed to the American farmer to the limit of his ability to supply efficiently the needs of the consuming public.
8. Loans for crop storage on farms should be provided and funds for the surplus commodity corporation increased. Marketing agreements should be strengthened.
9. A larger amount of tariff revenue should be set aside for research, to find new uses for farm products, new plants and new crops, and to equalize prices.
10. The program must consider the federal treasury and protect the interests of the ultimate consumer. It must be workable and constitutional.
