### Loan Granted **Wool Growers**

Grease Basis Will Average Between 15-22 Cents, Ward Announces

Secretary of Agriculture Wallace has granted a \$50,000,000 loan program for wool producers on their 1937 and 1938 wools, according to word just received from R. A. Ward, general manager of the Pacific Wool Growers, who has been in Washington, D. C., for some time representing his association and the Oregon Wool Growers, and other groups in negotiations for this

The loan has been approved by the commodity credit corporation and the president, said Mr. Ward, and will be made available in accordance with the provisions of the agricultural adjustment act of 1938. The loans will be available to wool cooperatives and all producers, and the basis for Fine Territory wools is: Per clean pound: Choice. 59c; good to choice, 57c; verage to good, 56c; average, 54c; poor and inferior, 50c.

The basis for Crossbred Territory wools is: Per clean pound: Graded, 52c; original bag, 51c; three-eighths blood, 48c; quarter blood. 44c; coarse, 35c; all rejects, 20c.

Grease Basis 15 to 22c On a grease basis the loans will average between 15c and 22c per pound, and the approved program authorizes loans on 250,000,000 pounds of wool. Producers may obtain loans on wool stored at eastern and western concentration points. Loans will be made only after the wools have been classified in warehouses by inspectors of the commodity credit corporation, and the corporation will designate approved warehouses in which the wool may be stored.

Agricultural adjustment act officials emphasize that the loan is not a price-fixing loan but a marketing loan designed to protect wool producers against the Potatoes, local, No. 1, cwt..... effects of unfavorable conditions in the wool industry, commented Mr. Ward. The loans are to be made for a ten-month period with maturity on loans set for May 31, 1939. The loans will will be without recourse in the event the market decl'nes and the grower does not wish to reclaim his wool before the maturity of the loan.

# Crop Rotation Is Flax Worm Remedy

The most practical control yet Stags, .b. Stags, .b. White Leghorns, frys has been doing serious damage in some fiber flax sections in Oregon, is a definite rotation which will bring the flax crop following a cultivated crop. according to investigation made last year by the Oregon experiment station. A special appropristion for the study of this pest was made by the last legislature.

The insect is an introduced pest from Europe, which in the larva form is the same worm that has been found working on strawberries in some sections. It is an omniverous feeder, willing and able to exist on more than 60 different kinds of plants, says G. R. Ferguson, assistant entomologist at the station. He found the worst damage where flax follows a legume crop. The flax worm works on the growing tip of the plant, causting it to branch, thus reducing its value for fiber purposes.

### Former OSC Assistant Will Succeed Johnson

OREGON STATE COLLEGE-Dr. E. M. Dickinson, at present engaged in research work in poultry diseases at the University of California at Los Angeles, has been named poultry pathologist at Oregon State college to succeed Dr. W. T. Johnson, who died recently. Dr. Dickinson ser ed as assistant pathologist under Dr. Johnson for more than six years before going to California.

## Decline as War Tension Easing

## Plants May Be Certified

Rieder Gives Rules for all Strawberry Growers in This Area

Strawberry-plant certification by the Oregon State college extension service is for the purpose of providing a source of improved planting stock, states Robert E. Rieder, assistant county agent and county horticultural inspector. Any grower wishing to certify his plants should get an application blank at the county agent's office and file it by the first of April. Any grower agreeing to abide

by the rules for strawberry-plant certification may apply for certification, says Mr. Rieder. However, the right is reserved to return the fee and cancel the aprlication of any grower in an inaccessible district or in a location where time and expense required to make the inspections would be excessive, or if for any other reasons certificati n of the field is found undesirable. A fee of \$7 is required of

each grower for the first acre or less that is entered for certification, and \$3 for each additional acre or fraction thereof. One half of the fee must accompany the application for certification and the remainder must be paid before the final certification. Only entire fields can be accepted for certification.

Refunds will be made when withdrawals are filed before inspections are made or expenses incurred by the extension service. When fields are rejected on the first inspection, all fees paid will be refunded except \$2. Fees for fields rejected on the second inspection will be refunded above \$4.

Some additional requirements are: 1. Fields entered for certification must be at least 300 feet from non-certified strawberry plantings. 2. Plantings are to be made on used in operating the farm and hop-

the hill system, and are to be yard. given the best standard care and treatment. 3. All low-yielding, diseased,

or abnormal plants must be rogued out and removed from the field. 4. Fields showing more than five per cent virus and other se-

rious diseases at any field inspection will be rejected. 5. Inspections will be made during the blooming and fruit-The bureau said a greater por- ing periods, and again in the fall before any plants are dug.
