The Aumsville fire truck was called, extinguished the grass fire and saved the barn. About five acres of pasture and hay stubble and standing barley were burned over and some fear was felt lest the flames reach standing timber. Stumps and logs in the pasture are still burning. 400 Stayton Houses Being Numbered, Movement Sponsored by Lions Club

STAYTON—Purchase of between 1400 and 1500 house numbers for Stayton was sanctioned by the board of directors of the Lions club at the luncheon meeting this week.

The club sponsored the movement and bought the house numbers. The city is now installing them on the 400 houses to be numbered. Kennard Rowe is doing the work.

Grant Murphy gave the vocational talk. He stated that forestry officials estimate that there are 125 billion board feet of lumber in the Willamette basin area, and that if these were cut into pieces one inch thick and 12 inches square and placed side by side, they would reach eight times around the globe.

"The lumber industry is as old as history itself, with timber being one of the most useful articles known to man and yet it was one of the biggest obstacles to the early settlers," he continued, in speaking of the early day methods of lumbering.

He traced the trend of lumber manufacturing from east to west, beginning with Maine, which was first in this line, to Michigan, Wisconsin and Washington. He said that Washington has been alternately at the top of the list for the annual volume of production with Mississippi, but that Oregon topped all states in the production of lumber in 1938.

Miss Florence Beardsley and Miss Henrietta Wolfer plan to leave this week for a trip to San Francisco and the fair.
