## Paint Hints For Family Artist

Typical of the hundreds of color hints put out by one of America's foremost manufacturers of fine paints, are the following, which may help your family decorator toward perfection in his summertime painting efforts.

Light painted walls make a room seem larger; dark patterned walls close it in. Pastels are primary colors lightened with white and do not clash like bright colors.

Always try to balance light walls with dark furnishings or vice versa to provide contrast. A grayed wall color is safer, can be used on larger areas and more colors can be used with it. Cool colors are the sky, sea, and grass colors such as green, blue, gray, and green-blue. They create a feeling of rest and repose, make walls recede.

Warm colors are the "fire and sun colors" such as red, orange, yellow, violet and their tints. They make rooms cosier, livelier, but must be balanced with cool colors for relief. Never balance two major colors evenly; they will neutralize each other.

One of two pieces of painted furniture are a smart relief from large areas of stained wood pieces. Dark colors can lower ceilings; light ones will lift them. Long narrow rooms can be "squared" by painting end walls a dark, warm or "advancing" color.

## Small Cans Are Easily Heated

The size of the family is not the only point to consider in deciding what size jars or cans to use in canning meats and some kinds of vegetables, the Bureau of Home Economics advises.

Any convenient size can or jar is suitable for canning fruits or tomatoes because they are juicy foods that contain acids. They can be heated through quickly and are not so likely to spoil. But the smaller size cans or jars are better for vegetables and meats, which are nonacid foods and must be processed at a higher temperature to prevent the growth of bacteria that may cause spoilage.

When there is a thick mixture in a large container it takes a long time to heat the food in the center, and the food near the outside may become overcooked.

A No. 2 1/2 can or a quart jar can be used for canning most vegetables. But a No. 2 can or a pint jar is better for canning cream-style corn, which forms a compact mass, or for peas and lima beans which are starchy vegetables with thick skins. To cut down the processing time for any type of food, have the food hot when it is packed into the cans or jars.

## Mattress Needs Good Spring

Only one person out of four who have bought modern type mattresses in the past five years is using it with the right kind of bedspring, according to manufacturers' estimates. An innerspring mattress should be used with either a firm boxspring or a coil spring with special features which fill the surface spaces between the coils to give the innerspring mattress a fuller base upon which to rest.
