The housing and maintenance of men in England and other countries likewise requires a large amount of lumber. Besides, 55% of the Leonard Gouge Bound American lumber output is used for crating lend-lease material.

All this has resulted in the sharp rationing of lumber and the L-335 ruling which provides farmers with but 100 board feet of lumber per month and that only for essential building. Application for more can be made and submitted to the board but may not be granted as Marion county's quota is but 500,000 board feet.

This is a crankcase

THE UNDER SIDE of your engine I is enclosed by a thing that is called a crankcase.

This is a sort of swimming pool where hard-working engine parts splash around in motor oil to keep from getting overheated.

Speaking of oil, remember how doughnuts, French fried potatoes, etc., foul up your deep fat with hard, burned particles of this and that? Well, oil in your crankcase gets fouled up, too.

Its hot, dirty assignment is preventing metal parts from cooking to a crisp in the terrific heatinside

your engine . . . quite expensive parts like gears, pistons and bearings.

One minute your oil looks almost good enough to put on waffles. But a few "A"

coupons later it has become grimy black from carbon, dust and sludge. And as gritty as a picnic on a windy beach.

Then it's time to have Shell put in fresh, safe Golden Shell motor oil. And while they're about it, have 'em Shellubricate the entire car. This is a service protecting all vital parts. A good bet to keep your family bus from joining the 5000 worn-out automobiles that limp to junk yards every day.
